

Figures

1.1	Reform in energy, transport and communications according to regulatory area, 1975–2003	2
1.2	Timing of reforms in energy, transport and communications, 1975–2003	3
1.3	A dynamic model of technological, socioeconomic systems	6
2.1	Forces pushing toward reform in the water sector	30
2.2	Forms of arrangements according to the allocation of property rights	32
4.1	The seven phases in road reform	62
4.2	Agenda for road management reform	64
4.3	Old versus new organization of contracting entities	66
4.4	The Finnish reform path	79
4.5	The Spanish reform path	80
5.1	Coevolution between institutions and technology in network industries	96
6.1	IEEE 802.11 standards mapped to the OSI reference model	109
6.2	Participation of members in IEEE 802.11 workgroups, 1990–2004	110
6.3	Infrastructure development model according to Sawhney	118
6.4	Wi-Fi product life cycle by units shipped and revenues, 1985–2005	123
6.5	The expanding Wi-Fi supply chain	124
6.6	Mobility and data rate for wireless technologies	128
7.1	An overview of factors affecting the electric energy industry	136
7.2	Competitive forces map for the regulated electric energy industry	137
7.3	Opportunities for alternative architectures for the electrical power industry	140
7.4	Points of potential change in the existing energy value chain	141
7.5	Hybrid paradigm in electricity distribution	145
7.6	The electricity industry of the future	153
7.7	System paradigm change in the electricity sector	158
7.8	Information technologies' role in the emerging dynamic energy systems	158

9.1	Technological revolutions and ages of infrastructure development	195
9.2	Topography of the analog telecommunications technology	199
9.3	Topology of today's digital telecommunications technology	202
