

Figures

1.1	A threshold model of path-dependent development with structural transaction costs allocated in time	25
3.1	The employment growth rate in Sweden	64
3.2	Scharpf's Law: decreasing microeconomic costs but exponentially rising transaction costs by increasing the use of outsourcing in the public sector	71
4.1	The ideal European administrative model for welfare and workfare: the road map to the 'promised land'	83
4.2	The three administrative traditions biasing choice options with none of them able to solve the so-called 'trilemma' in the regulatory welfare and service sector without generating 'failures'	87
6.1	The Public Pension Fund: value and prediction for growth of the Norwegian petroleum fund	125
