

Tables

2.1	A summary of the research on brand trust	25
3.1	The resultant factors	46
3.2	Assessing the number of Second Life business owners using Positive Monthly Linden Dollar Flow (PMLF)	48
4.1	Source of grey market products in China	57
5.1	Trust variables: descriptive statistics and difference tests <i>between</i> countries (non-parametric test)	81
5.2	Construct differences <i>within</i> countries by gender (non-parametric test)	82
5.3	Gender differences (one-way ANOVA test)	83
5.4	Gender difference test: multiple comparisons for <i>Trust in the information</i> and <i>Overall trust</i> (post-hoc Tukey HSD)	83
A5.1	The measurement scales	89
A5.2	Demographic profile of the respondents	90
6.1	C2C auction process	95
9.1	Characteristics of the respondents (%)	154
9.2	Loadings, construct reliability and convergent validity for model 1 (high-involvement product)	156
9.3	Loadings, construct reliability and convergent validity for model 2 (low-involvement product)	157
9.4	R-squared	157
9.5	Structural model results	158
10.1	Use of mobile services in Germany (GER), Finland (FIN) and the UK: results of the one-way analysis of variance test (ANOVA)	173
10.2	Results of the one-way analysis of variance test (ANOVA) for the composite variables measuring the factors affecting general willingness to permit mobile marketing: Germany (GER), Finland (FIN), the UK and the combined data from all three countries (ALL)	175
11.1	Questions used to track trust flows and interaction in Delta	190
11.2	General network indicators for cognitive trust (C-Trust), affective trust (A-Trust), mobile phone dialogues, SMS, emails and face-to-face interaction	192

11.3	QAP correlations of perceived and interaction based relations in Delta	195
12.1	Main characteristics of virtual teams as identified by different researchers	209
12.2	Different types of virtual teams and teamwork characteristics	219
13.1	The use of media in GIS promotion	235
13.2	Factors that develop trust in service providers	237
14.1	Trust models	256
14.2	Guidelines for establishing and maintaining trust in global information systems	262
