Contributors

Maarten J. Arentsen holds a Master’s degree in political science and a PhD in public administration from the University of Twente, the Netherlands. He is Associate Professor of Energy and Environment at The School of Business, Public Administration and Technology of the University of Twente. He develops, conducts and supervises research on energy policy and energy innovation, and has published widely in the area.

Adam Buchhorn has an MSc and is currently a PhD scholar in governmental policy measures for green technologies at the Department of Organization, Copenhagen Business School, Denmark. Buchhorn’s main area of interest and research is the construction and organization of markets for green technology, in particular how policy-makers negotiate and set socio-economic value as a key factor in policies for combating climate change.

Yong Chen has an MSc in Environmental Management and Policy from Lund University, Sweden. He conducts assessments and analyses on renewable energy systems and environmental policy, with a geographical emphasis on the EU and China. Before joining the Stockholm Environment Institute (SEI) in 2002, he worked for several years within the Chinese Environmental Protection Administration, where he was in charge of bilateral and multilateral assistance in the environmental sector, and participated in negotiations of international environmental treaties.

Francis X. Johnson has been a research fellow at the SEI since 1998. Previously he was a senior research associate in the Energy Analysis Program at Lawrence Berkeley National Laboratory, CA, USA. He has had an interdisciplinary education with a concentration on energy-environmental systems analysis and policy. His key areas of interest are policy analysis of climate mitigation strategies, energy efficiency options, bioenergy and implementation of renewable energy systems. Johnson has worked with a number of international organizations, and has served as expert evaluator for the European Commission on international energy projects.

Peter Karnøe is Professor in Technological Innovation and Strategy at Copenhagen Business School, Denmark. He has published widely in the area of energy policy and economics, with a focus on the interplay of
technological innovation, market development and sustainable businesses. His publications explore the emergence of modern wind power, generative processes associated with path creation, the institutional embeddedness of technological innovation, and field research methodology.

Paula Kivimaa is Researcher at the Finnish Environment Institute (SYKE), where she has focused on policy aspects of environmental innovation and technological change in the forest and energy sectors. She completed her PhD thesis on the innovation effects of environmental policies at Helsinki School of Economics in June 2008. Her research interests include the preconditions for and barriers to innovation and technological change in the energy sector, and the integration of policies from the perspective of innovation. She has published articles on environmental innovation, environmental policy and policy integration in international journals.

Jørgen Knudsen is Researcher at the Programme for Research and Documentation for a Sustainable Society (ProSus) at the University of Oslo, Norway. He holds a Master’s degree in political science from the University of Oslo, and has worked as a senior executive officer at the Norwegian Ministry of Environment. His current research interests are in governance and policies for renewable energy in the Nordic countries, the EU and the USA. He is also currently involved in regional and European projects on governance for sustainable development, with a particular focus on environmental policy integration (EPI).

William M. Lafferty is Professor of Political Science and Director of the Programme for Research and Documentation for a Sustainable Society (ProSus) at the Centre for Development and the Environment (SUM), University of Oslo, Norway. He has been Director of ProSus since 1995, and has led several international and European projects on problems related to governance for sustainable development. He has been Visiting Professor at numerous research institutions in Europe and the USA, and is currently Adjunct Professor at the Centre for Clean Technology and Environmental Policy (CSTM), University of Twente, The Netherlands.

Olav Mosvold Larsen has a Cand. Polit. degree in political science from the University of Oslo, Norway, and was Researcher at the Programme for Research and Documentation for a Sustainable Society (ProSus), University of Oslo until 2006. He is currently Senior Adviser for Sustainable Development at Avinor, the public air control body of Norway. His research has focused in particular on eco-innovations, the integration of environmental and innovation policies, and environmental policy integration (EPI) in general.
Volkmar Lauber has been Professor of Comparative Politics at the University of Salzburg, Austria since 1982. He studied law and politics at the universities of Vienna, Paris and Harvard, and at the University of North Carolina in Chapel Hill, USA, where he received his PhD in political science in 1977. His main research interest is Austrian environmental policy, and more recently the politics of renewable energy.

Gerard Mullally is Lecturer at the Department of Sociology, University College Cork, Ireland. He received his doctorate in 2001 and has been a researcher at the Centre for European Social Research and the Cleaner Production Promotion Unit, Department of Civil & Environmental Engineering, UCC. His research interests include environmental sociology, democracy and sustainable development. He has participated in numerous research networks and projects in Europe, and has most recently completed a project on public participation and local sustainable development for the Environmental Protection Agency in Ireland.

Jillian Murphy holds a BSc in earth science and an MSc in environmental resource management from University College Dublin, Ireland. She has worked at the Cleaner Production Promotion Unit, Department of Civil & Environmental Engineering, UCC from 2000 to 2007, on a wide range of projects in areas such as waste management, environmental risk assessment, environmental management and environmental training. She is currently completing an MEngSc degree in sustainable energy, and works with Dynea Ireland Ltd as an environmental officer.

Michael Narodoslawsky holds a Diploma in Chemical Engineering and a Doctorate in Technical Sciences from the Technical University Graz, Austria. He is currently head of the Institute for Resource Efficient and Sustainable Systems at this university. Narodoslawsky has published extensively on sustainability indicators and sustainable regional development. He has headed the research association SUSTAIN and was Chairman of the European Network for Urban and Regional Sustainable Development Research (ENSURE) within the framework of the European Association of Social Sciences (EA) until 2005. His current research interests include life-cycle analysis for various technologies and products, as well as the synthesis of process networks in the field of renewable resource utilization.

Carmen Navarro is Associate Professor at the Department of Political Science, Autonomous University of Madrid, Spain. She did her undergraduate work at the University Complutense of Madrid and received a PhD at the University of Alcala (Madrid) in 1999. She joined the University Autonomous in 1997. Her main research interests are public policy and public administration, environmental policies and the politics of
local government. She has published several articles on these topics and participates in international research networks analysing the Spanish case. She has been visiting scholar at Georgetown University, Boston College in the USA, and at the Instituts d’Études Politiques of Lille and Bordeaux in France.

**Christian Nopp** (Diplom-engineer DI) studied environmental management at the University of Natural Resources and Applied Life Sciences in Vienna, Austria. From 1997 to 2004 he has worked as an academic assistant at the Department of Energy at Johannes Kepler University, Linz, Austria. He is the author of several books and essays in the field of renewable energy.

**Barbara Pflüglmayer** has Master’s degrees in law and social economics from the Johannes Kepler University, Linz, Austria. She received her doctoral degree in law in 2004, and worked until the same year as academic assistant at the Department of Energy at Johannes Kepler University. She is the author of several books and essays in the field of energy policy.

**Audun Ruud** is Senior Researcher and Deputy Director of ProSus, University of Oslo, Norway. He holds a Dr Polit degree in political science from the University of Oslo and a Master’s of Business Administration from the Norwegian School of Economics and Business Administration (NHH). His research interest is the role of business in promoting sustainable production and consumption, corporate environmental reporting, eco-innovations and energy policy, and governance for sustainable development at large.
