Acknowledgements

This book, with the exception of the annex, is the outcome of a research project granted by the European Union Sixth RTD Programme Framework in 2004–05 as a specific support action named SESSA. It was coordinated by the editors of this book and carried out by the authors of the different chapters. The main academic institutions involved were: the Bocconi University in Milan, Cambridge University, the Catholic University of Louvain, Comillas University in Madrid, DIW Berlin, the Ecole des Mines de Paris, the Norwegian School of Economics and Business Administration in Bergen, Stockholm School of Economics, the University Paris-Sud, and the University of Hull. Part of the SESSA research project has already been published in a special issue of *The Energy Journal*, European Electricity Liberalization (2005).

The editors are particularly grateful to the 50 and more academic research teams and numerous stakeholders from the European energy business, as well as from regulatory milieus, for their insights and the efforts they made throughout the entire programme.

In addition, Domenico Rossetti di Valdalbero, scientific officer at the DG Research (European Commission), who obliged us to keep focused and to deliver on time; Pippo Ranci (former Italian Energy Regulator), advisor of the SESSA Executive Committee; Ute Dubois and Roxana Saplacan – Pop, who literally took care of everything, and Rim Boubaker with Iris Vincent, who handled the manuscripts, also deserve very special thanks.
