Figures

1.1 Simple Salter cycle  
3.1 The materials life cycle  
3.2 US economic system as a whole from a mass flow perspective (1993 in MMT)  
3.3a Total major inputs to GDP (fuels, metals, construction, chemicals and biomass): in terms of mass (USA, 1900–2004)  
3.3b Total major inputs to GDP (fuels, metals, construction, chemicals and biomass): in terms of exergy (USA, 1900–2004)  
3.4a Major inputs of fossil fuels (coal, petroleum, natural gas and NGL): mass/capita and exergy/capita (USA, 1900–2004)  
3.4b Major inputs of chemicals to GDP: mass/capita and exergy/capita (USA, 1900–2004)  
3.4c Major inputs of construction to GDP: mass/capita and exergy/capita (USA, 1900–2004)  
3.4d Major inputs of metals to GDP: mass/capita and exergy/capita (USA, 1900–2004)  
3.4e Major inputs of biomass to GDP: mass/capita and exergy/capita (USA, 1900–2004)  
3.4f Total major inputs to GDP (fuels, metals, construction, chemicals and biomass): mass/capita and exergy/capita (USA, 1900–2004)  
3.5a Major inputs to GDP of fossil fuel: mass/GDP and exergy/GDP (USA, 1900–2004)  
3.5b Major inputs to GDP of chemicals, major organic and inorganic: mass/GDP and exergy/GDP (USA, 1900–2004)  
3.5c Major inputs to GDP of construction materials: mass/GDP and exergy/GDP (USA, 1900–2004)  
3.5d Major inputs to GDP of metals: mass/GDP and exergy/GDP (USA, 1900–2004)  
3.5e Major inputs to GDP of biomass: mass/GDP and exergy/GDP (USA, 1900–2004)  
3.5f Total major inputs to GDP (fuels, metals, construction, chemicals and biomass): mass/GDP and exergy/GDP (USA, 1900–2004)
