## Figures

1.1 The waveform evolution of capitalism (1770–2060)  
2.1 The creation of a new firm in Schumpeter’s Mark I model, with no possibility of further expansion  
2.2 The two feedback loops of an incumbent firm in Schumpeter’s Mark II model  
2.3 Logistic diffusion with added r-innovation and K-innovation  
9.1 Relative regional employment in high-tech sectors, 1995–2006  
9.3 Relative regional real wages, 1995–2006  
13.1 A typology of regional knowledge anchoring capacities  
18.1 Clustering, externalities and regional competitive advantage  
18.2 Regional dynamic comparative advantage  
19.1 Marshall’s triad of external economies of industrial localization  
19.2 The mechanisms through which locally dominant cultural norms, values and beliefs inform worker and firm behaviour  
32.1 North Jutland’s green regional innovation system  
33.1 Main structure of regional innovation systems (RISs)  
34.1 Wallonia innovation system and strategy  
38.1 Government investment vs private investment in Israeli incubators’ projects, 1991–2006  
39.1 Regional knowledge generation, diffusion and exploitation  
41.1 The principle of combining industries and areas of expertise in the Regional Development Platform Method  
41.2 A systemic framework for development of a regional innovation system  
41.3 The age business core process in the Lahti region  
42.1 Regional intercluster innovation platform model  
42.2 The Lahti regional innovation system platform policy toolkit  
42.3 Regional innovation quadrants  
42.4 Transversality: key process and practice conceptual framework
