Contributors

Richard M. Adams is Professor Emeritus of Resource Economics at Oregon State University, Corvallis. His research interests include resource and environmental issues, with an emphasis on water management. He has published over 100 peer-reviewed articles and 20 books or book chapters, and also serves on numerous federal and international advisory boards dealing with water and other environmental issues.

Ruth A. Aisabokhae is a PhD candidate and research assistant in the Department of Agricultural Economics at Texas A&M University, College Station. She completed a Masters in Agricultural Development Economics from the University of Reading, UK in 2005 and has been a Schlumberger Faculty for the Future Grant Recipient since 2008. Her research interests include environmental economics, especially climate change issues, international trade and rural development. She is active in a number of professional associations and has also convened two conferences in Africa to empower young women in the sciences.

Nico Bauer holds a PhD in Economics from Potsdam University. After working at Fondazione ENI Enrico Mattei (Italy) in the Climate Change Modeling and Policy programme, and Paul-Scherrer Institute (Switzerland) in the Energy Economics Modeling group, he returned to the Potsdam Institute for Climate Impact Research. He is engaged in the development of modeling tools and responsible for the research group on energy System Modeling (with Gunnar Luderer) and Macroeconomic Modeling (with Marian Leimbach).

Maria Bielza is Assistant Professor of Agricultural Economics at the Technical University of Madrid (UPM), and researcher at the Research Centre for the Management of Agricultural and Environmental Risks (CEIGRAM). She has participated in Spanish and European projects, and has several publications on agricultural risk management, including market risks, insurance and derivatives. During her previous working experience at the Joint Research Centre (European Commission) she has contributed to the JRC Reference Report ‘Agricultural Insurance Schemes’, which reviewed risk management in all EU member states. She holds a PhD in Agricultural Economics from UPM and a Diplôme d’Agronomie Approfondie in Agricultural Development from the Institut National Agronomique Paris-Grignon.

Alvaro Calzadilla is a research economist at the Kiel Institute for the World Economy. He holds a Masters degree in Economics from Universidad Andina Simón Bolivar, and is currently pursuing a PhD in Economics from Hamburg University and the International Max Planck Research School on Earth System Modeling. He specializes in economic and econometric modeling, particularly computable general equilibrium models applied to the analysis of climate change, agriculture, water resources, income distribution, poverty and development.

Olivier Deschenes is Associate Professor of Economics at the University of California Santa Barbara, where he is also affiliated with the Bren School of Environmental Management. He is a also Research Associate at the National Bureau of Economic
Contributors

Research (NBER), the co-associate director of the University of California Center for Energy and Environmental Economics (UCE) and holds a PhD in Economics from Princeton University.

Jan Philipp Dietrich studied Physics at the University of Potsdam and is a PhD student at the Potsdam Institute of Climate Impact Research. His research focuses on agricultural land-use modeling, the role of technological change in the agricultural sector, and the estimation of future bioenergy potentials and their impact on the environment.

Ariel Dinar is Professor of Environmental Economics and Policy at the Department of Environmental Sciences, and Director of the Water Science and Policy Center at the University of California, Riverside. He earned his PhD in Agricultural and Resource Economics from the Hebrew University of Jerusalem. His work focuses on economics of water resources, impact of and adaptation to climate change in agriculture, and institutional economics of water and natural resources.

Agustín Diz holds an MSc in Anthropology and Development from the London School of Economics and works as a research assistant at the Department of Agricultural Economics of the Technical University of Madrid (UPM). His current work focuses on the areas of water policy and the socioeconomic impacts of climate change.

Aliza Fleischer is an associate professor in the Agricultural Economics Department at the Hebrew University of Jerusalem, Israel. As an economist in the GLOWA Jordan River project, she deals with economic impacts of climate change. She evaluated the impact of climate change on the value of ecosystem services of range land and on the profitability of farm land. She also analyzed the impact of climate change on the farm sector in Israel. Application of the model to Israel with its high-tech agriculture gave a new insight to farmers’ adaptation mechanism to climate change.

J. Aapris Frisbie is a Master’s student in the Geological Sciences Department at the University of California, Riverside who is currently researching soil carbon sequestration along an elevational transect in the White Mountains of eastern California. She is interested in researching the mitigation potential of soil in regard to climate change, as well as developing models to assess to sequestration potential of soils in California.

Alberto Garrido is a professor of Agricultural and Resource Economics at the Technical University of Madrid (UPM). He is the Director of the Research Centre for the Management of Agricultural and Environmental Risks (CEIGRAM), a research centre of the UPM. He has published extensively in water and natural resource economics, risk management and insurance in agriculture, agricultural policy and sustainability assessment. He is also deputy director of the Water Observatory of the Botin Foundation and member of the Advisory Committee of the Rosenberg International Forum on Water Policy. He has published more than 115 papers, chapters and monographs.

John B. Gaughan is a senior lecturer at the University of Queensland. He earned a MAgSci and a PhD from the University of Queensland. Dr Gaughan is currently involved in studies investigating the effects of climate variability, and climatic effects, in particular heat stress on livestock production and welfare. Output from these studies includes the development of risk assessment programs for feedlot beef and dairy cows.
Collaborative research is ongoing with colleagues in the USA and Australia. He is author or co-author of over 60 scientific publications.

**Douglas Gollin** received his PhD from the University of Minnesota. He is a professor of Economics at Williams College, Williamstown, Massachusetts with interests in agriculture, economic growth and development. He has worked in Africa and Asia in collaboration with various international organizations. He has published in *American Economic Review, Journal of Political Economy, Science, American Journal of Agricultural Economics* and other journals. He currently serves as an associate editor for the journals *Agricultural Economics* and *Journal of Development Economics*.

**Michael Greenstone** is the 3M Professor of Environmental Economics in the Department of Economics at the Massachusetts Institute of Technology, and the director of the Hamilton Project. He is on the Massachusetts Institute of Technology (MIT) Energy Initiative’s Energy Council and on MIT’s Environmental Research Council. In addition, he is a senior fellow at the Brookings Institution and a research associate at the National Bureau of Economic Research. Greenstone received a PhD in Economics from Princeton University and a BA in Economics with High Honors from Swarthmore College.

**Michael Hayes** is currently the Director for the National Drought Mitigation Center (NDMC) located within the School of Natural Resources at the University of Nebraska–Lincoln. He became the NDMC’s director in August 2007 and has worked at the NDMC since 1995. The NDMC now has 21 faculty and staff working on local, tribal, state, national and international drought-, climate- and water-related issues. Dr Hayes’s main interests deal with drought monitoring, planning and mitigation strategies. Over the past ten years, Dr Hayes has been an author or co-author on 27 peer-reviewed articles in 16 different journals. He is currently a co-chair on the National Integrated Drought Information System’s Program Implementation Team. Dr Hayes received a Bachelors Degree in Meteorology from the University of Wisconsin–Madison, and his Masters and Doctoral Degrees in Atmospheric Sciences from the University of Missouri–Columbia.

**Mario Herrero** is a senior agro-ecological systems analyst with more than 15 years experience working in agriculture and livestock research projects in Africa, Asia, Latin America and Europe. He works in the areas of livestock and global change, socio-economic and environmental tradeoffs in livestock systems, climate change (impact, adaptation and mitigation) and integrated assessment of agricultural systems at different scales (household to global). He holds a PhD in Natural Resource Management from the University of Edinburgh and has published extensively in his areas of expertise.

**Gal Hochman** holds a PhD in Economics from Columbia University. He is a visiting scholar at the Agricultural and Resource Economics Department, University of California, Berkeley, and a researcher at the Energy and Bioscience Institute. His ongoing research interests revolve around trade, energy and regulation. His current work focuses on the impact of renewable energy on the fuel, heat and power industry, as well as on agriculture, the environment and the fiber sector.

**Richard E. Howitt** is a professor and chair in the Department of Agricultural and Resource Economics at the University of California in Davis. His research focuses on the interface...
Contributors

between agriculture and irrigation. Together with colleagues, he has developed a sophisticated model of irrigation water use in California which has been very successful in analyzing climate change impacts and adaptation in the complex California water-agriculture system.

Ana Iglesias is Professor of Agricultural Economics at the Technical University of Madrid (UPM), Spain and previously a research scientist at Columbia University, USA. Her research focuses on the interactions of global change, agriculture and water, with particular emphasis on economic impacts, adaptation and vulnerability. She is currently involved in several EU projects related to adaptation policy. Her work has been published in over 100 papers and she is currently review editor of the Economics of Climate Change for the IPCC.

Peter G. Jones gained an Honours Degree in Agronomy from the University of Leeds. He went from there to Jamaica to study soybean with the original Rockefeller grain legume program. This led to PhD studies on soybean physiology at Sydney University under Doug Laing. He then moved to the International Centre for Tropical Agriculture (CIAT) in Colombia for one year as a post-doc and ended up staying there for 30 years, inventing agro-ecological studies in the process. He is now a consultant on climate change in agriculture worldwide.

David Klein is a PhD student in the Research Domain for Sustainable Solutions of Potsdam Institute for Climate Impact Research and member of the Energy System Modeling group at PIK. He studied Energy Engineering at the Technical University of Berlin with a focus on renewable energy. He is currently working on the coupling of global energy system and land-use models to assess the role of bioenergy in long-term climate change mitigation scenarios.

Pradeep Kurukulasuriya has earned a PhD in Environmental Economics from Yale University. He is currently Senior Technical Advisor for Climate Change Adaptation at the United Nations Development Programme (UNDP), where he leads a programme that assists countries to access, combine and sequence environmental finance for adaptation to climate change risks and opportunities in the context of low carbon climate resilient development. His research findings have been published in World Bank Economic Review, Climatic Change, African Journal of Agricultural and others.

Donald F. Larson is a senior economist with the World Bank’s Development Research Group and a member of the team that developed the Prototype Carbon Fund, the World Bank’s first carbon fund, in 1999. In addition to carbon markets, his areas of study include commodity risk management, agricultural development policy and rural development. Among his recent publications is Vulnerable Places, Vulnerable People: Trade Liberalization, Rural Poverty and the Environment, a volume he co-edited with colleagues from the World Bank and the World Wildlife Fund.

Marian Leimbach is Senior Researcher at the Potsdam Institute of Climate Impact Research and head of the research group on Macroeconomic Modeling. He studied Operations Research and holds a doctoral degree of Economics from the Economic University in Berlin. He has been affiliated with the Potsdam Institute since 1992 and was strongly involved in the development of the integrated assessment models ICLIPS and REMIND. His research interests focus on climate policy modeling, endogenous economic growth and dynamic trade theory.
Hermann Lotze-Campen studied Agricultural Sciences and Agricultural Economics at Kiel (Germany), Reading (UK) and Minnesota (USA). He holds a PhD in Agricultural Economics from Humboldt University Berlin. At the Potsdam Institute for Climate Impact Research Dr Lotze-Campen is leading a research group on the interactions between climate change, agriculture and food production, land and water use, and adaptation options through biomass energy production and technological change.

Jay R. Lund is the Ray B. Krone Professor of Civil and Environmental Engineering at the University of California, Davis, and director of the UC Davis Center for Watershed Sciences. Together with colleagues, he has developed a sophisticated hydrological model of the complex canal-irrigation system of California. His research has been successfully used to understand how climate change would affect the California water system and what changes in allocation might be effective adaptations.

Terry L. Mader is a professor of Animal Science at the University of Nebraska. Dr Mader earned his BS from Kansas State University and his MS and PhD from Oklahoma State University. Dr Mader is actively studying climate variability and environmental effects on cattle productivity. Current interest includes evaluating models and management strategies for livestock production. Collaborative research and extension efforts are ongoing with colleagues in North and South America, and he is currently an honorary professor of Animal Production at the University of Queensland in Australia. He is author or co-author of over 300 scientific publications.

Emanuele Massetti is Postdoctoral Fellow at the Yale School of Forestry and Environmental Studies (Yale FES), Senior Research Fellow at the Sustainable Development Unit of Fondazione Eni Enrico Mattei (FEEM) and Research Affiliate at the Euro-Mediterranean Centre for Climate Change (CMCC). He is lead author in the Working Group III for the Fifth Assessment Report of the IPCC and has been a consultant for the UN Environmental Programme (UNEP), the Organisation for Economic Co-operation and Development (OECD) and the European Bank for Reconstruction and Development (EBRD). Emanuele holds a PhD in Economics with Honours from the Catholic University of Milan and MAs in Economics from Brown University and University College London. He has done extensive modeling research of climate mitigation as well as his more recent analyses of impacts to agriculture.

Bruce A. McCarl is Distinguished Professor and a Regents Professor in the Department of Agricultural Economics at Texas A&M University, College Station. His research interests include climate change adaptation, mitigation and effects, along with water and agricultural policy, bioenergy, mathematical programming and risk analysis.

Josué Medellín-Azuara is a research scientist at the Center for Watershed Sciences of University of California, Davis. He holds degrees in engineering, economics and business, and a PhD in Ecology from UC Davis. Josué’s research interests include water management, adaptation to climate change, water recycling and economic analysis of water demand.

Robert Mendelsohn is the Edwin Weyerhaeuser Davis Professor at Yale University where he has taught since 1984. He received his BA from Harvard University in 1973 and his PhD from Yale University in 1978. Dr Mendelsohn is a resource economist.
who specializes in valuing the environment. With colleagues, he has valued the marginal damages of air pollution emissions across the USA, local hazardous waste pollution, local wildlife populations, recreation areas, oil spills, timber and non-timber forest products from tropical forests. Over the last 16 years, Dr Mendelsohn has measured the impacts from climate change around the world. He has studied climate impacts in over 30 countries, including continental-scale studies of Africa and South America. An important aspect of this climate research is studying how people adapt to climate in different places.

**M. Inés Mínguez** is a professor of Crop Ecology and Agronomy at the Technical University of Madrid (UPM) and belongs to the AgSystems research group. She has published papers on nitrogen fixation, crop water use and responses to water stress, canopy and crop modeling, which have been extensively cited. She has also done sustainability studies in the Spanish Central Plateau and impact assessment of climate change for state organizations, having produced research papers and also technical reports for the ‘Plan Hidrológico Nacional’. She has been leader and partner of national research projects financed by the CICYT and the EU. She is currently deputy vice-rector for Research at UPM.

**Dannele E. Peck** is Assistant Professor of Agricultural and Applied Economics at the University of Wyoming, Laramie. Her research interests include agricultural production and natural resource issues, with emphases on decision making under uncertainty, water resources, and wildlife–livestock disease.

**David Pereira** is Senior Lecturer in Spatial Planning and Management and Environmental Impact Assessment, within the Rural Planning Department at the Technical University of Madrid (UPM). His main research interests are land-use changes in rural areas and in rural–urban transitions and environmental impact assessment and strategic environmental assessment methodologies focused on regional development.

**Alexander Popp** has a PhD in Ecology from the University of Potsdam. He is Senior Researcher at the Potsdam Institute of Climate Impact Research and head of a working group on land-use management. His scientific work concentrates on potential and limitation of bioenergy, avoided deforestation in tropical countries for mitigation, vulnerability of the agricultural sector to climate and land-use change, mitigation in the agricultural sector and climate policy as a component of fair globalization and sustainable poverty reduction.

**Deepak Rajagopal** is an assistant professor in the Institute of Environment and Sustainability at University of California, Los Angeles. He has a PhD in Energy and Resources from the University of California, Berkeley. His research expertise is in environmental economics and policy, lifecycle assessment for policy design, energy markets and policy, energy and sustainable development, economics of food and agriculture, renewable energy systems, integrated assessment of technology, markets and policy.

**Katrin Rehdanz** is Assistant Professor for Environmental and Resource Economics at the Christian-Albrechts University of Kiel associated with the Kiel Institute for the World Economy. She holds a diploma and a PhD in Economics from the University of Hamburg. She has a strong background in environmental valuation and environmental-economy modeling. She is leading the young researchers group ‘Valuing the Ocean’ within the cluster of excellence initiative ‘The Future Ocean’ funded by the German government.
John Reilly is the co-director of the Joint Program on the Science and Policy of Global Change and a senior lecturer in the Sloan School at MIT, with a PhD (1983) in Economics from the University of Pennsylvania. His research career has focused on the integrated assessment of climate change, including modeling of energy use, biofuels and the climate’s effects on agriculture. His work is published in over 150 articles, reports and volume chapters. He was convening lead author for the agriculture chapter of Working Group II of the Intergovernmental Panel on Climate Change Second Assessment Report, co-chair of the US National Agricultural Assessment on Climate Variability and Change, and served on committees that shaped the US Global Change Research Program. Before joining MIT in 1998, he spent 15 years with the US Department of Agriculture’s Economic Research Service, with prior service for the Pacific Northwest National Laboratory and the Institute for Energy Analysis, Oak Ridge Associated Universities.

Dolores Rey is a PhD student at the Technical University of Madrid. She is working at the CEIGRAM (Research Centre for the Management of Agricultural and Environmental Risks). Her research focuses on the impacts of climate change in Spanish agriculture: crop yield, evapotranspiration, irrigation requirements and crop insurance. Currently, she is working on a project titled ‘Water cap and trade – water market scenarios for Southern Europe: new solutions for coping with water scarcity and drought risk?’

Claudia Ringler is a senior research fellow at the International Food Policy Research Institute, where she co-leads the water research program. Her research interests are water resources management – in particular, river basin management – and agricultural and natural resource policies for developing countries. She has more than 70 publications in the areas of water management, global food and water security, natural resource constraints to global food production, and adaptation to climate change.

M. Ruiz-Ramos is a researcher and assistant professor of Crop Ecology and Agronomy at the Technical University of Madrid (UPM). She belongs to the AgSystems research group and is an associated member of the group MOMAC from the University of Castilla–La Mancha, devoted to climate and environmental modeling. She has published papers on crop modeling, soil structure and the assessment of climate change impacts on cropping systems, and she is co-author of a simulation model of a legume canopy. She has contributed to technical reports for the Spanish administration and has been leader of regional projects and partner of several national and European projects.

R. Maria Saleth holds a PhD in Agricultural and Resource Economics from the University of Illinois at Urbana–Champaign. He is currently Director, Madras Institute of Development Studies, Chennai, India. He works and publishes in the areas of water management, agriculture and climate change.

Jeremy Schlickenrieder is a research fellow of the Department of Agricultural Economics at the Technical University of Madrid (UPM). He holds an MSc in Environmental Technology from Imperial College London and recently contributed to the development of a framework for socioeconomic considerations in the use of biotechnology in the Food and Agriculture Organization of the UN (FAO). His research experience includes the study of the socioeconomic and environmental impacts of biofuels and climate change adaptation.
S. Niggol Seo received a PhD degree in Environmental and Resource Economics from Yale University with a focus on global warming. He is a senior fellow at the Faculty of Agriculture, Food, and Natural Resources at the University of Sydney in Australia. He has done extensive research in Africa and Latin America on the impacts of climate change on livestock and how local farmers adapt.

Mark Svoboda has been with the National Drought Mitigation Center (NDMC) since it was formed in 1995. As the NDMC’s monitoring program area leader, his duties include overseeing the Center’s operational national drought monitoring activities. Mark’s responsibilities include providing expertise on climate and water management issues by working closely with states, federal agencies and international governments as well as the media and the private sector. Mark helped develop and establish the US Drought Monitor in 1999 and serves as one of the principal authors of both the weekly USDM and monthly North American Drought Monitor products. Mark is heavily involved with drought monitoring, assessment and prediction committees at state, regional and national levels. He currently sits on the National Oceanic and Atmospheric Administration’s National Integrated Drought Information System (NIDIS) Program Office’s Implementation Team and was appointed as the co-chair for NIDIS portal development. Mark earned both his Bachelor’s Degree in Geography specializing in Climatology and a Masters Degree in Geography with a specialization in Remote Sensing, Climatology and GIS from the University of Nebraska–Lincoln.

Philip K. Thornton is a theme leader and senior scientist with CCAFS (Climate Change, Agriculture and Food Security) at the International Livestock Research Institute (ILRI) in Nairobi, Kenya. He holds a PhD in Farm Management from the University of Canterbury, New Zealand. He has worked for over 25 years in Latin America, Europe, North America and Africa in agricultural research for development. He has published widely on systems modeling and impact assessment, with a current focus on the effects of global change on agriculture in developing countries.

Richard S.J. Tol is a research professor at the Economic and Social Research Institute, Dublin and Professor of Economics of Climate Change at the Vrije Universiteit, Amsterdam. He specializes in the economics of energy, environment and climate, and is interested in integrated assessment modeling. Dr Tol is ranked among the 200 best economists in the world. He is an editor of Energy Economics. He has played an active role in international bodies such as the Stanford Energy Modeling Forum, the Intergovernmental Panel on Climate Change, the Global Trade Analysis Project and the European Forum on Integrated Environmental Assessment.

Miroslav Trnka is Associate Professor in the Department of Agrosystems and Bioclimatology within the faculty of Agronomy of Mendel University in Brno, Czech Republic, where he has worked between 2002 and 2009. In 2010, he became the deputy head of the Department of Climate Change Impacts on Agrosystems within CzechGlobe, where he also leads a field research lab focusing on the research of sustainability of some climate change mitigation strategies. Dr Trnka’s main interest is in drought impacts and vulnerability in the past, present and especially in the future, as well as seeking the best adaptation approaches on local and regional levels. Dr Trnka has been an author or co-author of over 20 papers in Web of Science journals and actively participates in a
number of European, international and national research projects. Dr Trnka received his Masters and Doctoral Degrees in Applied Landscape Ecology from Mendel University and a Masters Degree in Law and Law Science from Masaryk University.

Donald A. Wilhite is Director of the School of Natural Resources and Professor of Climatology at the University of Nebraska–Lincoln, USA. Before taking up this position, Dr Wilhite was the founder and director of the National Drought Mitigation Center and the International Drought Information Center at the University of Nebraska–Lincoln. His research and outreach activities have focused on issues of drought monitoring, planning, mitigation and policy, and the use of climate information in decision making. He has authored or co-authored more than 130 journal articles, monographs, book chapters and technical reports. Dr Wilhite is editor or co-editor of numerous books on drought and drought management, and is currently editing a new book series on Drought and Water Crises to be published by CRC Press.

Yuquan W. Zhang is a PhD candidate and research assistant in the Department of Agricultural Economics at Texas A&M University, College Station. He obtained his BS in Resources Science and Engineering from Beijing Normal University, China in 2007. His research interests include climate change and biofuel-related issues. His recent work focuses on the economic implications of biofuel policy and the valuation of climate change adaptation strategies.

Tingju Zhu is a senior scientist at the Environment and Production Technology Division of the International Food Policy Research Institute. He graduated with a PhD in Civil and Environmental Engineering from the University of California, Davis. Most of his research involves using interdisciplinary approaches to analyse practical problems in water management, agricultural production and climate change, often through mathematical modeling. His work has been published in water-focused journals such as *Water Resources Research* as well as interdisciplinary journals such as *Climatic Change*.

David Zilberman is a professor and holds the Robinson Chair in the Department of Agricultural and Resource Economics at the University of California at Berkeley. Dr Zilberman is a Fellow of the Agricultural & Applied Economics Association and the Association of Environmental and Resource Economists. He has published 250 refereed articles in *Science*, *American Economic Reviews*, *Econometrica*, the American Journal of Agricultural Economics, and the Journal of Environmental Economics and Management, among others, and has edited 13 books. He has served as a consultant to the EPA, USDA, the World Bank, the FAO and the OECD. He received his BA in Economics and Statistics at Tel Aviv University, Israel, and his PhD at the University of California at Berkeley in 1979.

Lewis H. Ziska is a plant physiologist with the US Department of Agriculture’s Agricultural Research Service in Beltsville, Maryland. After graduating from the University of California, Davis, with a PhD he began his career as a Smithsonian fellow, and then took up residence as the project leader for global climate change at the International Rice Research Institute in the Philippines before joining USDA. At present he is investigating the impact of rising carbon dioxide and changing climate on food security, invasive species and public health.
