Tables

1.1 The 13 steps for the implementation of the SISP 18
2.1 Relationship between intervention type and physical condition of irrigation systems 36
2.2 Relationship between intervention type and technical efficiency of irrigation systems 38
2.3 Relationship between intervention type and economic efficiency of irrigation systems 39
2.4 Relationship between intervention type and water supply at tail ends of irrigation systems 41
2.5 Relationship between intervention type and water distribution pattern 43
2.6 Relationship between intervention type and agricultural productivity of irrigation systems 44
3.1 Basic information about the irrigation systems 52
3.2 Irrigable area and cost of improvements to 19 farmer-managed systems 59
3.3 Savings in cost of improvements due to farmer participation 61
4.1 The size of irrigated areas of the irrigation systems 69
4.2 Technical efficiency of irrigation infrastructure 71
4.3a Average water adequacy for 19 systems 72
4.3b Water adequacy at the tail end in winter 74
4.4 Tail-end cropping intensities 75
4.5 Levels of deprivation 76
4.6 Notations used in coding and Boolean analysis 86
4.7 Truth Table for persistent improvement of water adequacy at tail end in winter 88
4.8 Truth Table for persistent increase in cropping intensity at tail end 91
