
Tables

1.1	Macroeconomic effects on mortality estimated using pooled data with location-specific fixed effects	8
10.1	Annual health care expenditure, 1984 US\$	110
10.2	Estimated probability of death during the following year (per 1000)	111
12.1	Alternatives for achieving solidarity	124
12.2	Alternatives for neutralizing insurers' incentive to skim the cream (given uniform premiums)	129
16.1	Specific commitments of WTO members on individual health services	167
17.1	Decomposition of levels and change in concentration index. Height-for-age <i>z</i> -scores of children < 10 years, Vietnam 1993–98	185
17.2	Decomposition of change in summary statistics of distribution of height-for-age <i>z</i> -scores for children < 10 years, Vietnam 1993–98	188
18.1	Effect of health measures on health service utilization	199
18.2	Effect of socioeconomic variables and ethnicity on health service utilization	200
19.1	Infant and child mortality rates in the Asian region	205
19.2	Concentration indices for utilization of inpatient and outpatient services in the Asian region	206
19.3	Concentration indices for utilization of maternal and child health services in the Asian region	207
19.4	Kakwani progressivity indices – country and source	210
20.1	Attributes of the regulatory environment that may influence the nature and intensity of hospital competition	221
23.1	Services that may be contracted out	252
36.1	Description of EQ-5D, Health Utilities Index Mark 2 (HUI2) and Mark 3 (HUI3), Quality of Well-Being (QWB), and Short Form 6D (SF-6D) multi-attribute utility measures	385
36.2	Health-adjusted life expectancy based on HUI3 from the 1996–97 National Population Health Survey (Canada)	391
37.1	Summary of main issues in developing a preference-based measure	402
39.1	Attributes of the OCAP-18, ICECAP-O and ICECAP-A	421
40.1	Issues addressed and numbers of responses in each country	431
41.1	Example of choice task in a DCE	438
42.1	Matrices for choice sets in Example 1	452
42.2	Main effects only: two attributes with two levels, two attributes with four levels	454
42.3	Main effects and two factor interventions: four attributes with two levels	455
46.1	Summary of estimators addressing selection bias in observational studies	495
46.2	Illustrative example	499
47.1	Competing choice example	506

47.2	The 'shopping spree'	507
47.3	Ranking of 'shopping spree' programmes by cost-effectiveness ratio	508
47.4	Incremental cost-effectiveness ratios of programmes M_1 – M_4	510
47.5	Revised incremental cost-effectiveness ratios after eliminating programmes ruled out by extended dominance	510
47.6	Expanded 'shopping spree' incorporating competing choices	511
48.1	Costs, effects and cost-effectiveness of interventions for reducing exposure to selected risk factors in a region of the Americas	518
49.1	Choosing between new programmes to maximise health gains	533
50.1	Cost-effectiveness of 40mg simvastatin daily	546
51.1	Calculating EVPI	554
53.1	Steps in a PBMA priority setting exercise	577
53.2	Ethical considerations in a priority setting process	582
