Tables

2.1  Labour productivity per hour worked: GDP in purchasing power standards 14
2.2  Turnover from innovation as percentage of total turnover 18
2.3  Protection methods used by enterprises as a percentage of innovative enterprises by country, EU27 member states and Norway 20
2.4 (Neo)Schumpeterian perspectives on technology and growth and their policy implications 24
3.1  Level of GDP per capita and average annual growth rates 49
3.2  Expenditure per student at different education levels and gross enrolment rates 63
3.3  Subjective indicators on tax compliance (BEEPS survey), percentage of firms 71
4.1  Structural decomposition of intramural R&D spending 80
4.2  Country groups based on direct and indirect R&D intensity 84
4.3  Average share of turnover from products new to the market 92
4.4  Regression results 95
A4.1 The sector classification based on innovation intensity 110
A4.2 Variable definition for regression analysis 111
5.1  CEEC5 innovation challenges and priorities 124
5.2  Examples of challenges per type of failure in the EU27 128
5.3  Distribution of estimated public expenditure on RTDI policy measures in CEEC5 versus EU25 (2008) 142
7.1  Variables to describe key market conditions as a basis for demand-based policies 186
7.2  Selected variables important for demand and demand-based policies: WEF CEE country data 188
