Figures

2.1 Distributions of returns under truncation 20
2.2 Cumulative distributions of returns under truncation 21
3.1 Availability of wholesale access in the EU 34
3.2 Market shares of wholesale offers in 2008 34
3.3 Penetration of fully unbundled lines 35
3.4 Changes to the access network structures 38
4.1 Shares of different access products for fixed line telecommunications in the EU 55
4.2 Share of service-based and facility-based entry in the fixed line telecommunications market in the EU 56
4.3 The new entrant’s market share for DSL lines in the EU 56
4.4 Total investment in telecommunications for the EU countries (at 2007 prices) 57
4.5 Shares of broadband access technologies for EU member states (June 2008) 60
4.6 Shares of broadband access technologies for South Korea 60
4.7 The new entrant’s market share for mobile subscribers and investment in the mobile telecommunications market 62
4.8 Investment in the fixed and mobile telecommunications sector in the EU member states (June 2006) 63
5.1 Evolution of UK policy on mandated access to incumbent facilities, 1984–2008 72
5.2 Exchange line share, 1997–2007 73
6.1 OECD broadband penetration and population densities 81
7.1 Options of WiMAX network in the unlicensed band 108
8.1 Impact (=importance × ease of delivery) per operator for UC, PT and CC 136
8.2 Overall UC and CC impact scores rebased to add to 100 per cent for each operator 136
8.3 Overall ‘strength of feeling’ of UC vs CC for each operator 137
8.4 Strength of feeling by objective for each operator 137
9.1 ‘Wait and see’ option of non-investors 146
9.2 Asymmetric distribution of loss during penetration phase 149
9.3 Pricing of risk sharing 155
9.4 Wholesale price differentiation for different bandwidths 156
9.5 Risk sharing plus risk premium 157
Figures

10.1 Partial rivalry and overload inefficiency in the internet 162
10.2 Optimum internet capacity 164
10.3 Non-quality-sensitive, low-value service $S_L$ 167
10.4 Quality-sensitive, high-value service $S_H$ 168
10.5 Effect of priority pricing on utility and capacity 171
11.1 Factors of switching costs 184
11.2 Perceived difficulty of switching: Hungarian customers 184
11.3 Perceived difficulty of switching: British customers 185
11.4 Switching telecommunication operator in Hungary and the UK in the two previous years (percentage of customers of the service) 185
11.5 Comparing switching costs (expected monthly saving, means after logarithmic transformation) 187
11.6 Switching costs with and without mobile number portability 190
12.1 Telco-centric platform model: the Vodafone Live! case 203
12.2 Device-centric platform model: the iPhone case 205
12.3 Aggregator-centric platform model: the Facebook Mobile case 207
12.4 Service-centric platform model: the Open Social case 208
12.5 Evolved platform model for mobile operators 211
13.1 Conceptual model 222
13.2 Structural model for mobile broadband entertainment services for 2007 and 2008 230
13.3 Structural model for mobile communication services for 2007 and 2008 231
14.1 Different user domains of a mobile service 246
14.2 Adoption of mobile services 248
14.3 Satisfaction rates 250
14.4 Correlation between demographics and adoption bottlenecks 255
15.1 Utility and cost of a marginal minute – no need for internalisation 267
15.2 Utility and cost of a marginal minute – need for internalisation 267
16.1 Average price around the introduction of regulation 291
