Figures

2.1 Aspiration profiles in a simple portfolio decision 31
3.1 Spreading of a novel trait in a population via processes of biased cultural transmission for different values of $\alpha$ (denoted by $'a'$ in the figure) and $b$ 52
4.1 Dependence of returns to advertising on user friendliness and communication intensity 68
4.2 Cross-sectional cuts into Figure 4.1 70
5.1 Distribution of open science identity 87
5.2 Distribution of perceived reputational reward from commercialization 87
6.1 Dynamics of per capita output averaged over 10 runs for different values of the stock-out probability 113
6.2 Dynamics of per capita output averaged over 10 runs for different values of the markup 114
6.3 Dynamics of the markup charged by firms in a single simulation run 116
6.4 Dynamics of per capita output averaged over 10 runs 117
8.1 Categories of knowledge assets, value creation and value capture 158
8.2 Value creation linchpin from a management perspective 174
8.3 Division of labor and division of knowledge balance 176
10.1 Median and 75th percentile of number of full-time equivalents of spin-offs and other entrants, classified by age 208
10.2 Job creation and job destruction of spin-offs and other entrants, classified by age 209
10.3 Boxplox of employment growth, classified as spin-offs and others 210
10.4 Kaplan-Meier survival rates for spin-offs and other entrants 212
11.1 Regional patent output 225
11.2 Cooperation potentials 227
11.3 Realized cooperations 229
