

Tables and Boxes

TABLES

3.1	Global cost of adaptation assessment studies	38
5.1	Illustrative examples of instruments to encourage low-carbon technologies	91
7.1	Selected average household expenditures by income quintile (2003)	135
7.2	Sector-level emissions	138
7.3	Estimated 2003 household CO ₂ emissions by income quintile	139
9.1	Emissions by country in the least cost solution achieving a 50% reduction by 2050	191
9.2	Transfers based on per capita allocation of rights	192
9.3	Historic debt (US\$ bn) per annum	195
10.1	Discounting CERs according to levels of emissions and per capita income for selected countries	227
10.2	Discounting CERs on the basis of a development index starting at half of the global average	228
10.3	Discounting CERs based on per capita emissions	229
11A.1	Shares of the central and local governments in the total government revenue and expenditure in China, 1993–2008	245
11A.2	Preliminary and final values for total primary energy consumption and coal consumption in China, 1990–2008	247
11A.3	A reduction in China's energy intensity: preliminary value versus final value	249
11B.1	Major EU climate-related policies	256

BOXES

5.1	Illustrating the instrument combination: the cases of wind and solar energy	92
9.1	POLES model	189
