</table>
30.1 Frequency and coverage indices for export products from
developing countries to the EU market subject to
environmental measures, 1992 457
33.1 Monetary $2 \times CO_2$ damage in different world regions 495
33.2 The social costs of $CO_2$ emissions 497
40.1 Estimated costs of transport in OECD countries as a
percentage of GDP 582
40.2 Energy efficiency of transport modes 583
40.3 Policy instruments for containing the environmental intrusion
of transport 586
41.1 A number of integrated assessment models for climate
change 600
43.1 How we used up all the resources we had and still finished up
with more than we started with 629
45.1 A comparison of the five perspectives based on the
framework 651
45.2 Characteristics of the five perspectives 652
46.1 Overview of empirical studies that have used model (46.1)
for estimating the relationship between pollutants and
income 662
47.1 Typical examples of economy-wide concerns and policy
tools to address them 679
47.2 Example of an action impact matrix 692
48.1 Comparison of social, economic and environmental
sustainability 710
48.2 The definition of environmental sustainability 716
50.1 Poor economies with high export concentration in primary
commodities 733
55.1 Studies in environmental, regional, urban and transport
economics using meta-analysis 800
58.1 An evaluation table 838
58.2 Evaluation table of a transportation problem 846
58.3 Pairwise probabilities 848
60.1 World production of metal ores, 1993 868
60.2 Production and waste allocation for primary US metal
production, 1988 and 1993 878
60.3 By-product and co-product groups 880
60.4 Indicators of unsustainability 882
60.5 Production and waste allocation for US industrial mineral
production from domestic and foreign ores, 1988 and 1993 884
60.6 US recycling statistics and apparent consumption for selected
metals, 1987–91 888
Major ecosystems of the world, their area and productivity
Ecosystems generate and sustain essential natural resources and ecosystem services
Nutrient reservoirs participating in global cycles
Ratios of C, N and P in various reservoirs
The stabilizing influence of the biosphere (Gaia)
Examples of transformities
Comparison of indicators in energy analysis and EMERGY analysis
Market and governmental intervention failures in coastal zones
Development status of integrated assessment models
The degree of disaggregation in French energy–economy models
A comparison of top-down and bottom-up models
Data for a simple decomposition example
Decomposition results obtained using the energy intensity approach and the data in Table 74.1
Decomposition results obtained using the energy consumption approach and the data in Table 74.1
Decomposition results for specific cases of parametric Divisia index methods obtained using the energy intensity approach and the data in Table 74.1
Comparisons of the results given by the conventional and refined Divisia index methods using the data in Table 74.1
Decomposition of change in energy demand
Percentage change in intermediate sector energy demand in the US, 1972–82
