context and concepts 123–6
effects of separate policy changes benefit rates 137
marginal tax rate 135
Working for Families 136
income distribution 133–4
overview 4
simulated labour supply responses average 128–31
conclusions on 137–40
measures 128
tax and revenue changes 131–3
tax reforms 126–8
tax credits
New Zealand’s tax system array of, for low-income taxpayers 166
exclusion from tax-calculator 17
as generous system of family-based refundable 15, 142
as received by relatively high-income households 194–5
recommendations for 208–9
US and UK 98
WfF 103–10, 113, 119, 121, 126, 136
tax incidence 11
tax progressivity 13–14
tax rates see marginal tax rates; optimal top tax rates; top income tax rate and threshold
tax reforms 2010 126–8
importance of allowing for potential labour supply responses 132
and labour supply elasticities 48
see also designing direct tax reforms; optimal marginal tax reforms; welfare-improving tax reforms
TaxWell-A 6–10, 20–21, 131
TaxWell-B
calibration approach 10, 131
disposable incomes 87
distributional impact of policy change 118–19, 134
elasticities 63–9
exclusion of self-employed 40
labour supply responses 124–5, 138
microsimulation modelling 6–10, 20–24
New Zealand income tax structure 141, 143–52
policy evaluation and simulations 101–3
as supply-side partial-equilibrium model 139–40
use of discrete hours modelling 71–2
welfare-improving tax reforms 143–52
top income tax rate and threshold assessing optimal, in New Zealand 38–9
designing direct tax reforms 15–16
microsimulation modelling 20–24
revenue-neutral changes in 18–20
tax calculator 16–18
and tax rate progression 13
top rate taxpayers 32, 37, 40
value judgements behind optimal position 74
implication of adopting 33–5
inclusion in policy recommendations 11
need for rational policy analysis 11–12
at starting point of standard structural optimal tax models 28
terms reflecting 30–31
welfare changes
- concepts of 72–3
  - by demographic group and age 90
  - and disposable income 88
  - and tax bracket 89
  - exact computation 94
  - marginal 27, 166–7
  - measuring
    - calculating marginal welfare costs 81–3
    - nonlinear budget constraints affecting 143
    - in random utility model 77–81, 145–8
    - per dollar of revenue 166–9, 170
    - percentage
      - money metric utility and net income 191
      - with and without spillovers 206
  - results and limitations 95
  - social 30–31, 142
  - welfare costs of direct taxation
    - context and concepts 71–4
    - empirical results
      - aggregate results 84–5
      - data sources and method 83–4
      - welfare costs for subgroups 85–7, 88–90
    - evaluations using social welfare function 87, 91–4
    - measuring welfare changes 77–83, 145–8
    - New Zealand, previous estimates 74–7, 94
    - overview 3
    - study conclusions 94–5
  - welfare costs of indirect taxation 76–7
  - welfare-improving tax reforms
    - aggregate effects 152–60
    - aim, objective and context 141–2
    - contrast with Australia 142, 161–2, 171
    - income threshold changes
      - rate and threshold changes combined 169–70
      - welfare effects per dollar of revenue change 166–9
    - marginal tax rate changes
      - changes in welfare per dollar of revenue 160–63, 170–71
      - inequality changes 164–6, 171
      - modelling approach 142–3
      - New Zealand income tax structure 151–2
      - social welfare function 148–51, 170–71
      - welfare metric computation 143–8
  - overview 4–5
  - welfare metrics
    - computation of 144–8
    - selection of 87, 90–91, 143–4
    - see also money metric utility (MMU); net income
  - welfare reforms see welfare-improving tax reforms; Working for Families (WfF)
  - welfarist measures 22
  - WfF see Working for Families (WfF)
  - work incentives 97, 98, 108, 113, 132, 139
Working for Families (WfF)
  - aims of 97–8
  - benefit changes for families with children 103–8
  - earlier studies 99–100
  - effects
    - on budget constraints 108–10
    - on inequality 118–19
  - eligibility rules 98–9
  - government expenditure and revenue 116–18
  - need for fresh analysis 100–101
  - overview 3–4
  - plans 98
  - policy evaluation
    - role of examining past policy changes 121–2
    - and simulations 101–3
  - simulation results
    - features of 119–20
    - labour supply 112–16, 120–21
  - methods 111
  - tax changes in 2010 136
  - tax credits 103–10, 113, 119, 121, 126, 136
