 Austin, Texas: technology companies 384, 385
 background 378–80
 bubble diagrams 391–3
 central tendency measures 385
 change over time 382–3
 cohesiveness of cluster 385
 convergence 397–8, 400
 cooperation 398, 400–401
 core cluster industry 390, 391–3
 deceleration stage 379
 decline stage 379, 395
 decomposition of clusters 401
 dimensions of clusters 395–6
 dynamics of clusters 395, 401
 entrepreneurship 397, 399–400
 exhaustion stage 396, 399–401

- exploitative growth 395
- exploratory growth 395–6, 397–8
- first- and second-level clustering 387
- input–output analysis 390–91
- interindustry dependence 390
- knowledge and information 397, 399
- life-cycle model 401
- location quotient (LQ) 382, 390, 392
- mean center or centroid of
 - distribution 385
- measuring and assessing cluster
 - dynamics: life-cycle analysis 393–6
- measuring and illustrating structural
 - properties 388–93
- measuring relative importance of
 - cluster 389–93
- measuring and visualizing spatial
 - pattern data 380–88
- minimum distance, center of 385
- networking 398, 400
- origin stage 379
- performance of clusters 388–9
- point cluster/pattern data 383–8, 396
- propulsiveness or growth tendencies
 - 382–3, 390, 393, 401
- rejuvenation stage 379, 395
- relative concentration 382
- scale of cluster 401
- sectoral composition 401
- shape measure of a cluster 384–5
- Shenandoah, Virginia 391–2, 393, 402
- spatial concentration 397, 399
- spider diagrams 388–9
- strength of clusters 397, 399
- subclusters 386–8
- United States: change in technology
 - employment 381, 383
- Washington: high-tech companies
 - 380, 385–8, 389
- spatial concepts and critical thinking
 - 29–40
 - distance and direction 32–3
 - location 31–2
 - neighbourhood and region 34–6
 - scale 36–7
 - spatial dependence 37–8
 - spatial heterogeneity 39–40
- spatial Durbin (SDM) model 370
- spatial indexes: segregation 287–312
 - additive spatial decomposability 303–4
 - areal equivalence (AE) 303, 305, 311, 312
 - areal invariance 311
 - centralization 302
 - Charles and Grusky log index A 311
 - clustering 302
 - concentration 302
 - conceptual issues of measures 299–302
 - cross-section studies 288, 310
 - Deming and Stephan (DS) decomposition 305–6
 - evenness 288–9, 302, 304, 308
 - exchanges 303
 - exposure 302, 308–9
 - gender segregation 289
 - index of dissimilarity (ID) 288, 306
 - index magnitudes 308–10
 - Karmel and McLachlan (KM) index 304–5, 308–10, 311
 - kernel density estimation 307–8
 - labour force segregation 304
 - linear indexes 292
 - margin dependence 305, 308–9, 311
 - measurement 288–9, 299–306
 - mutual information index (MI) 305, 308–10
 - occupational segregation 288–9, 306, 311
 - properties of spatial indexes 302–4
 - representativeness 304
 - residential segregation 300, 301, 302, 304, 306–10
 - segregation profiles 309–10
 - spatial segregation 287
 - summary measures 288
 - Theil index spatial version 312
 - time series studies 288, 310
 - transfers 303
 - see also* aspatial segregation measures
- spatial intelligence 27
- spatial interaction models (SIMs) 364, 426–7
- spatial interdependence 345–6, 357, 376
- spatial interpolation 38

- spatial lag 357, 371
- spatial optimization approach 265, 273, 274–5, 278, 283, 543
- spatial order 362, 363
- spatial settings 484
- spatial turn 26
- spatial units of different scales 134
- spatial weight matrices 359–62, 363, 369, 372, 373
- spatially estimated model (SEM) 370, 372, 373, 374–5
- spatially inscribed social differences 151–2
- special purpose numeric and written information 95–6
- specification errors 243
