Index

absolute risk aversion 51
  measurement of 48, 50
  reduction of 49–50
ABX indices 257, 267, 274, 282
  CDO in 258
  lagged returns of 257–8, 266, 268, 271
  predictive power of returns of 259, 267, 274–7, 282
  reconstitution of 266
  shocks 254, 274, 279, 282
affine models 150, 160
  associated SDEs 148–9
  Heston 148
American Depository Receipts (ADR) 331
American International Group, Inc. (AIG) bailout of (2008–09) 256, 263
American option pricing 116, 118–20, 131, 133, 137
  bundling methods and state space partitioning 123–4
  parameterized stopping strategy 122–3
  regression-based methods 124–30
  solutions for 114–19, 122–6
  stochastic mesh methods 125–6
  use of exact algorithm in 117–18
  use of GARCH framework in 115, 119–21, 131–8
  use of LRNVR in 134
American Stock Exchange (AMEX) 25
anti-takeover provisions (ATPs)
  purpose of 292
Arrow–Pratt risk aversion theory 45, 72
asset and liability management (ALM) 60
  class system 61–2
  potential modelling of 54
  use of SP in analysis of 55, 57
asset-backed commercial paper (ABCP) 256
asset-backed securities (ABS) 257
  subprime mortgages contained within 256
autoregressive conditional heteroskedastic (ARCH) model 14, 373–4, 378–9, 381, 391, 409, 421, 463
  asymmetric GARCH 465, 474
  dynamics of 12
  fractionally integrated generalized (FIGARCH) 379, 381–2
  non-linear asymmetric generalized (NGARCH) 133, 137, 140, 142
  switching-regime (SWARCH) 5
  use in analysis of volatility 378
autoregressive moving average (ARMA) process 16
banking competition
  concepts of 197–8
  importance of 197
Basel II single-factor portfolio credit risk model 169
behavioural finance 73
book-to-market ratio (B/M), concept of 302
Boone indicator 210–11
  concept of 206–7
Buffett, Warren 69
  use of Kelly strategies by 65, 69
buy-and-hold abnormal returns (BHARs),
  use in calculation of long-run abnormal returns 297
calendar time abnormal returns (CTARs),
  use in calculation of long-run abnormal returns 297
calendar time portfolio regressions (CTPRs),
  use in calculation of long-run abnormal returns 297
capital asset pricing models 47
Centre for International Financial Analysis and Research (CIFAR) 314
Center for Research in Stock Prices (CRSP) 12, 346
Chicago Revisionist School 197
  key members of 199
  view of SCP paradigm 199
collateralized debt obligations (CDO) 263, 270
  predictive power of 260, 262
  use in ABX indices 258
commodity futures pricing models 101–4
  use of Kalman filter in 101
Commodity Research Bureau (CRB) 107–9
constant relative risk aversion (CRRA) coefficient 10, 16, 19–20, 22
consumption capital asset pricing model (CAPM/CCAPM) 15–16, 23, 27
equivalent of 17
shortcomings of 19
Corporate governance 317, 321–2, 338
impact on firm values 314–15
indices of 321–5, 331, 334–5
Cox–Ross–Rubinstein (CRR) algorithm 37
Credit Lyonnais Securities Asia (CLSA) 314
Cumulative abnormal returns (CARs) 296
role in definition of synergy gains 290–91
use in calculation of long-run abnormal returns 297
use in measurement of value from M&As 296–7
discounted dividend model, concept of 74–5
dividend multiple measure of fundamentals 77–8, 91–2
dividends 77
dynamic asset pricing models (DAPMs) 3, 19, 22, 24, 27
macro-style 20
variants of 20, 28
dynamic factor models (DFMs) 38
dynamics term structure model (DTSM) 33–4
MSVAR 33–5
Efficient market hypothesis (EMH) 259
elasticity of intertemporal substitution (EIS) 18, 20, 22
Emerging market scoring (EMS) 442–3
European option pricing 119–21
solutions for 133
Expectation-maximization (EM) algorithm 4–5
Expectations hypothesis (EH) 31, 34
failures of 32
Expected shortfall (ES) 357–8, 369
concept of 368
estimators of 360, 368
Expected tail loss (ETL) 357
concept of 368
Fast Fourier transform (FFT) 163, 165
examples of use of 166–8
use in calculations of integrals 162, 164
Feng, Holden, Trzeinka (FHT) estimator, use in measurement of liquidity 246
Fourier cosine transform (FCT) 165–8
concept of 164
examples of use of 166–8
FTSE Group, Global Government 10+ year bond clean indices 268
generalized error distribution (GED) 380
generalized method of moments (GMM) 22, 335, 337
system estimator 208
uses of 204
Governance Metrics International (GMI), dataset provided by 315, 317–18, 321, 325, 337
Great Depression, end of second merger wave during 288
hedging 341
potential impact on economic exposure 341–2, 344
Herfindahl–Hirschman index (HHI) 209
heteroscedasticity (MSIH) model 14, 23, 26, 82
estimates of 8
heteroskedastic regression model 217–18, 224–6, 230, 234–6
concept of 218, 220–22
mean equation of 226
High-variance regimes 9–10
Risk of stocks during 9
Initial public offering (IPO), underperformance of 38
inter-regime feedback, concept of 14
interest rate swap spreads (IRSS) 257, 261, 276–7
VAR model 282
International capital asset pricing model (ICAPM) 457, 459–60, 466, 474
asymmetry in 460–63
concept of 457–8
generalized impulse function (GIRF) in 461–2, 471–2
impulse responses in 461–2
use of 458–9
variance impulse response (VIRF) in 462–3, 466, 472
Intertemporal marginal rate of substitution (IMRS) 16
Intra-regime feedback, concept of 14
Jump parameter 10–11
Kalman, R.E. 97
Kalman filter 104, 106, 111, 169, 181
concept of 97–8, 100
extended 110
unscented 110–11
use of 98–9, 101, 105, 111
Index 479

Kelly strategies
fractional 65
uses of 65
Keynes, John Maynard 74
use of Kelly strategies by 65

Lagrange multiplier, use of 463
least squares Monte Carlo (LSM) method 127, 130
Lerner index 212
concept of 205–6
examples of 210–11
linear complementary problem (LCP) 47
liquidity 240, 260, 282
bid–ask spread 241–5, 249
definitions of 238–9
flight-to-liquidity 261
high–low spread estimator 247–8
illiquidity ratio 250–51
importance of 238
measurement of 238–48, 251–2
price dimension of 239
quantity dimension of 239
time dimension of 239
use of zero-return based estimators in 245–6
loan system 216, 218, 236
process of 216–17, 223
rate price dispersion 235
locally risk-neutral valuations relationship (LRNVR), use in American option pricing 134
log utility, myopic property of 63
London Interbank Offered Rate (LIBOR)
overnight indexed swap (LIBOR-OIS) 275
widening during US subprime crisis 256
long-run average cost (LRAC) 203
long-run marginal cost (LRMC) 203
market makers, risks faced by 240
Markov Chain Monte Carlo (MCMC) 170, 173, 181, 185, 191
concept of 169
convergence of 178–9, 188–9
Gibbs Sampler 178–9
Markov state 5, 10, 17
control of equilibrium PDR by 18
process of 8
Markov switching models (MSMs) 4, 6–8, 11, 18, 23, 25, 36–8
asset pricing applications of 7
multivariate 4
two-state 23
use in construction of DAPMs 3
VAR(p) (MSVAR) 4, 33
use of TVTPs in 16, 26, 31
Markov switching term structure models (MSTSMs) 27–8, 30–32, 34
K-regime 29
shortcomings of 32–3
two-factor 29
maximum likelihood estimation (MLE), defining 5
mergers and acquisitions (M&As) 287–8, 290, 294, 298–9, 301, 303–6
agency costs of 291–2
agency motive in 291
cross-border 302–3
failure of 306
history of 288–9
hostile 304
impact of information asymmetry 302
importance of method of payment in 300
managerial overconfidence 292–4
process of 298, 302
role of shareholder wealth effects in 298–9
synergy gains of 289–90
value creation from 295–6, 305
Metropolis–Hastings algorithm 173–7, 180–81, 185
independence chain Metropolis–Hastings 177, 179, 188
jump distribution 177–8
Metropolis algorithm 177
moment generating function (MGF) 154–6
Money Market Services (MMS) 408
Moody’s Investors Services, Industrial Manuals 431
mortgage backed securities (MBS) 263
multifrequency (MS) models 15–17, 21, 24–5, 27–8, 31, 33–4
autoregressive process in 15
dynamics of 18, 26
MS ARCH 5–6, 14, 33, 37
MS GARCH 6, 13–15, 36–7
regime dependent 19
two-regime 15
use in SDF 19, 27
multivariate regression model (MVRM) 348, 352
application of 344–5
use in analysis on affect of hedging on economic exposure 341–2, 344
National Bureau of Economic Research (NBER), business cycle dates 15, 29
new empirical industrial organization (NEIO) 197, 212
concept of 202–3
New Keynesianism 38
non-farm payroll (NFP) 415, 418
ODEs 156, 159–61
Riccati differential equation 157
optimal investment over time, growth factor 63
ordinary least squares (OLS) 173, 180, 268, 328, 335, 395–6, 409
use in calculations 136, 201, 204, 220, 222, 249
VAR 268
Panzar–Rosse H-statistic 198, 212
correction of 204–5
Panzar–Rosse revenue test 205
use of 204
partial differential equation (PDE) 148, 152–4, 156–7, 159, 161
Black–Scholes fundamental 152
partial integral differential equation (PIDE) 154, 158
perceived law of motions (PLM) 25
persistence of profit (POP) 207, 209, 212
portfolio theory 45–6
Markowitz model 45–6
static 45
Tobin model 46
portfolio weight 51
price–dividend ratio (PDR) 18, 23–4
controlled by Markov state 18
regime-dependent 21
time-varying 16
principal component analysis (PCA) 268, 316
use in corporate governance index 316, 324–5
quasi-maximum likelihood (QML) estimator 380
Ramsey RESET test 82–3
ratio analysis and bankruptcy evaluation 429, 436–7, 439, 445–6, 455
discriminant variables 448–9
earnings before interest and taxes/total assets (EBIT/TA) 433
market value of equity/book value of total liabilities (MVE/TL) 433–4
multiple discriminant analysis (MDA) 429–31, 435
retained earnings/total assets (RE/TA) ratio 433
sales/total assets ratio (S/TA) 434
seven variable model 447–8
working capital/total assets ratio (WC/TA) 432–3
regime switching dynamic correlation (RSDC) model 6
Rosse–Panzar H-statistic 209–10
interest income (II) 210
total income (TI) 210
sampling importance resampling (SIR) filter 181, 183–4, 190
auxiliary sampling importance resampling (ASIR) filter 183
seasoned equity offerings (SEOs) 297
small and medium-sized enterprises (SMEs) 218
separation theorem 46
Sharpe ratio 66
downside symmetric (DSSRs) 69
improvements upon 69
speculative bubbles 73, 75, 80–81, 83, 85
collapse of 74–6, 87
tests for presence of 82–9
Standard & Poor’s (S&P) 500 Composite Index 79–80, 83, 91, 138
dividend yield 76
speculative bubble presence in 81, 84, 87, 89, 91
total return index 76
variance bounds for 80
Standard & Poor’s (S&P) 500 (large) acquirers 292
standard industry classification (SIC) codes 298, 301
standard mean-variance theory 9
state space models non-Gaussian 181
non-linear 181
stochastic discount factor (SDF) 3, 17–18, 27, 29–30, 32, 34–5, 38
use of MS in 19, 27
stochastic differential equations (SDE) 148–9, 159
associated affine models 148–9
Feynman–Kac formula 152–4
Green’s function 151
Heston 156
Kolmogorov backward equation 150–53
stochastic programming (SP) 54, 58–9, 61–3
dynamic 55, 57
use in analysis of ALM 55, 57
structure–conduct–performance (SCP) paradigm 197–8, 200, 212
Chicago Revisionist School view of 199
concept of 198–9
shortcomings of 202–3
tests for relationship of 201–2
structured investment vehicles (SIVs) 263
Survey of Small Business Finances (SSBF) 230
synergy gains
  as CAR of combined firm 290–91
  role in M&A 289–90
Thomson Datastream, all items consumer price index (CPI) 76
Thomson Financial, Worldscope database 325
time-varying probabilities (TVTPs) 7, 33–4
  use in MSMs 16, 26, 31
Tobin’s Q 316–17, 325–6, 331, 334–5, 337–8
  concept of 301–2
trade indicator models, concept of 249–50
utility functions 49–50
  quadratic 63
variance bounds 78–80
  Gordon growth model 77
value-at-risk (VaR) 58, 357–67, 369, 371, 373
  conditional (CVaR) 58
  criticisms of 368
  definitions of 357, 361
  Johnson SU 362, 364–5, 371
  L-estimator 360
vector autoregression (VAR) 84, 257, 267–8, 270–71, 274–6, 283
  IRSS 282
  OLS equation 268
volatility 384, 390, 392, 397–8, 400–402, 409, 463
  Brownian semi-martingale with finite activity jumps (BSMFAJ) 385–8, 393, 400
  Brownian semi-martingale with infinite activity jumps (BSMIAJ) 388–9, 401
  concept of 373
foreign exchange 374
  impact of announcements on 413–14, 418–19
  intraday 391–3
  leverage effect 379
  median absolute deviation (MAD) 393–4
  periodicity in 401–3, 405
  realized (RV) 383–5
  use of ARCH model in analysis of 378, 421
  use of GARCH models in 380–81, 390–91, 405, 408–9, 420–21
volatility clustering 457
volatility feedback effect 18
  concept of 7
  solutions for 11–12
  volatility state 10–11
weighted-least squares (WLS) estimator 220
World Bank, Financial Development and Structure Database 209
Z-Score model 431, 440–42
  accuracy of 437–40, 449, 454
  concept of 431
  purpose of 428
  revision of 440–41, 444
ZETA® (1977) credit risk model 431–2, 444, 452, 454
  accuracy of 439, 444–5, 449, 454–5
  constant term of 451
  creation of 443–4
  purpose of 428
