
Figures

2.1	Theory modelling	34
3.1	The single time point two-method measurement model	69
3.2	The two-occasion two-method measurement model	72
3.3	The four-occasion two-method measurement model	73
4.1	Three panels showing the size of the effect of one variable on another (y-axis) plotted against time (x-axis)	83
5.1	Timeline of important events in the industry	101
5.2	Timeline of events by sector of activity	105
5.3	Comparisons of the strategic behaviors of Alcan and Alcoa over time	113
6.1	My chronological autobiographical timeline	128
7.1	The visual interview guide and the episodic probe questions	147
8.1	The six bridgehead relationships in the FME study	172
8.2	Data analysis and theory development according to GT methodology in the FME study	173
8.3	The framework generated in the FME study based on GT and contextual analysis	175
11.1	The application of process theory and process data in studies	240
11.2	Points where a process can be jeopardized during a research process	241
13.1	The data collection process and the timeframe of the study	276
13.2	Timeline of changes during the five data collection rounds	282
13.3	The examples illustrating the two approaches along the deductive–inductive continuum	288
14.1	Data collection in longitudinal field research	309
15.1	Organizing and executing a longitudinally based research program: an orienting framework	320
15.2	Ivey-JFDI Research Program annual publication record during the period 1994–2011 (N = 143)	324
