

Acknowledgements

In writing this book, the editors have benefitted from the support of many institutions and people. The volume is an outcome of activities carried out by the Platform of International Water Law of the University of Geneva. The initial impetus for the book came from two research projects on “Governing Water: The Contribution of International Law to Cooperation on Transboundary Freshwater Resources” and “Water Management and Protection: International Law Responses to the Challenges of Resource Scarcity,” funded by the Swiss National Science Foundation and the *Fondation Boninchi*, respectively. The two projects highlighted the importance of placing the analysis of international water law into a multidisciplinary context and led to the organization of an international conference on “Freshwater and International Law: The Multiple Challenges.” The conference, which took place from 7–9 July 2011 in Geneva, brought together leading academics and practitioners from Africa, Europe, India, the United States and South America.

The editors are grateful to the Agency for Development and Cooperation (SDC), Department of Foreign Affairs, Switzerland, the Swiss Federal Office for the Environment (FOEN), the Swiss National Science Foundation, the Société Académique de Genève, the Stiftung zur Förderung der Rechtlichen und Wirtschaftlichen Forschung an der Universität Basel, the Services Industriels de Genève (SIG) and the University of Geneva for their generous grants and in-kind support that made the organization of the conference possible. Thanks are also due to the over 140 participants of the conference for sharing their ideas and comments during the discussions, as well as to Antonella Angelini, Edouard Fromageau, Andrzej Gadkowski, and Komlan Sangbana for their assistance before and during the conference.

The editors express their deep appreciation to Brian McGarry for his great skills and dedication in carrying out his editorial work on the manuscript.
