

Tables

3.1	The eco-footprints and biocapacities of selected countries	58
4.1	Summary statistics	81
4.2	Fixed effects 3SLS results for FDI stocks and flows; dependent variable: ENVPOL	82
4.3	Sensitivity analysis (all using 3SLS); dependent variable: ENVPOL	87
4.4	Sensitivity analysis (all using 3SLS); dependent variable: ENVPOL	88
4.5	Testing the pollution haven hypothesis	90
4C.1	Data definitions and sources	98
4E.1	First stage FDI equations	100
4F.1	Fixed effects OLS results for FDI stocks and flows	101
6.1	Items and valuation methods used to calculate the GPI for Australia, 1962–2010	137
6.2	Genuine Progress Indicator (GPI) and real GDP for Australia, 1962–2010	150
7.1	GDP growth rates of selected Asia-Pacific countries and world regions	177
7.2	Per capita GPI and per capita GDP of seven Asia-Pacific countries	180
8.1	Summary of scenario results for 2035	210
9.1	Shifts of the $MB(Y)$ and $MC(Y)$ curves and the corresponding slope of the Environment-Income Curve (EIC) as Y rises	242
9.2	Average per capita GDP vs. average per capita energy consumption, 1980–2005 (118 countries)	249
9.3	Average per capita GDP vs. average per capita energy consumption, 1980–2005	250
10.1	Proposed planetary boundaries, including current status and pre-industrial value	262
11.1	Footprint and biocapacity for 25 selected countries, 2008	285
12.1	Conversion of a non-renewable resource into a sustainable flow of renewable resources	322
