Introduction to the Research Handbook on Design Law xxiv
Henning Hartwig

PART I FOUNDATIONS

1. Requirements for Design Protection: Global Commonalities 2
   Bernard Volken
   I. Law and design 2
      1. Design: what’s that? 2
      2. Design law: balance of interests? 3
      3. Review of interests 4
   II. Fundamental principles of design protection 5
      1. Subject matter of design protection 5
         a) Definition of a design 5
         b) Representation of a design 7
         c) Interpretation of a design 9
      2. Priority claim (‘the same’) 10
      3. Test for validity 11
         a) Novelty 12
         b) Individual character 15
         c) Non-obviousness 16
      4. Test for infringement 17
      5. Exclusion from protection 17
      6. Defences to infringement 19
   III. Registration versus use 19
      1. Concept of registration 19
      2. Concept of use 19
      3. Similarities and differences 20
   IV. Design versus patent versus copyright approach 20
      1. Patent approach 20
      2. Copyright approach 21
      3. Design approach 23
   V. The international legal environment: past and present 23
      1. History of origin 23
         a) TRIPS Agreement 23
         b) Paris Convention 24
c) Geneva Act of the Hague Agreement 24

d) Locarno Agreement 25

2. Status quo 25

a) Harmonisation in terms of formalities 25

b) Non-harmonisation in terms of substantive law 28

Jason J. Du Mont and Mark D. Janis

I. Introduction 30

II. Functionality in U.S. design patent law: critical trends 31

1. Emergence of a bifurcated approach: validity versus scope functionality 31

2. Applying validity functionality doctrine 34

a) Predominance of ‘alternative designs’ evidence 35

b) Assessing what constitutes an alternative design 37

c) The alternative designs analysis for standard-essential designs 38

d) Limiting the role of ornamentality tests 39

3. Applying scope functionality doctrine 40

a) Scope functionality in the claim construction analysis 40

aa) Process considerations after Teva 40

bb) Functionality and the abstractions problem 42

b) Tempering the Richardson ‘factoring’ analysis 43

III. Functionality in Community design law 49

1. The exclusions 50

a) Functionality exclusions 50

aa) Features solely dictated by technical function 50

bb) Features required for connectivity 61

b) Visibility requirement for component parts 63

2. Individual character and infringement doctrines 68

a) Impressing the informed user 69

b) The degree of freedom 73

IV. Conclusion 76

3. Easier to See than to Say: Catching the Elusive Spirit of Design in a Net of Words 77

David Musker

I. Introduction 77

II. Imprecisions in decisions 77

1. Verbalising and vocabularising: gaining words and losing meaning 79

2. Of generality and granularity 81

III. Overall impression and the test person: realistic or legalistic? 82

IV. Separating two questions: essence and similarity 83

1. The nature of the first question: the design 83

2. Like-with-like comparison 84
3. Determination of an unregistered design 84
4. Construction of a registered design 85
5. The nature of the second question: the visual comparison 87

V. Europe’s ‘overall impression’ test 88

VI. Dissecting the Gestalt 89
1. Purposes of dissection: filtration, weighting and short-cuts 90
2. Feature filtration 90
   a) Feature filtration: essential and inessential 90
   b) Feature filtration: old and new 92
   c) Feature filtration: functional, visible or ornamental 93
   d) Mixed-mode filtration 95
   e) Of babies and bathwater: the dangers of filtration 98
3. Short-circuiting the comparison 99
   a) Omission of essential or dominant features 100
   b) Point of novelty 100
4. Weighting and synthesis 101
   a) Weighting in relation to the prior art 102
   b) Distance from the prior art 102
   c) The ‘least distance rule’ 103
   d) Density of prior art 105
   e) Design freedom 105
   f) Other factors 106

VII. Comparing overall impressions: ‘structured approaches’ 106

VIII. Comparing similarities and differences at feature level 108
1. The Ereda approach: weighting the comparisons 109
2. Distortions caused by concentration on similarities 111
3. Distortions caused by concentration on differences 111
4. Difference in overall impression, or overall impression of difference? 111
5. Expert overshadowing 113
6. Trial fatigue and mind’s eye strain 114

IX. Conclusion: some palliatives 114

PART II METHODOLOGICAL PERSPECTIVES

4. Reciprocity in European Design Law 119
   Henning Hartwig
   I. The concept of reciprocity 119
      1. The notion of reciprocity 120
      2. Interaction between prior art and validity 121
      3. Interaction between prior art and scope of protection 125
      4. Interaction between scope of protection and infringement 126
      5. Interaction between validity, scope of protection and infringement? 128
      6. Interaction between prior art, scope of protection and infringement 131
7. Static scope of protection (date of reciprocity)  
8. Degree of freedom of the designer of earlier or later design?  
II. Other fields of reciprocity  
1. Subject matter of earlier and later design  
2. Different views of earlier and later design (partial designs)  
3. Use of solid and broken lines in earlier and later design  
4. The feature of colour in earlier and later design  
5. Description of earlier or later design  
6. The relevant prior art when testing validity and infringement  
7. Use of earlier and later design in the course of trade  
8. Informed user of earlier and later design  
9. Designer of earlier and later design  
10. No protection for the design of living plants or against its use  
III. Variations over time  
1. Re-design, facelift and rumours  
2. Eased conditions for finding validity?  
3. No discrimination of selected industries, sectors or categories  
IV. Reciprocity in European trade mark, trade dress and copyright law  
1. Reciprocity in trade mark law  
2. Reciprocity in trade dress law  
3. Reciprocity in copyright law  
V. Conclusions  
5. Design Rights and Designer’s Rights in the EU  
Anna Tischner  
I. Introduction  
II. Authorship and ownership  
1. Designer’s personal interests (designer’s right of paternity)  
2. Ownership  
   a) Initial entitlement (‘designer doctrine’)  
   b) The notion of the ‘designer’  
   c) Joint designership  
      aa) Plurality of designers  
      bb) The notion of ‘jointly developed’  
      cc) Changes to the original design  
      dd) Degree of contribution  
   d) The notion of the ‘successor in title’  
   e) Designs developed by an employee  
      aa) Original allocation of rights  
      bb) Variations under national law  
      cc) The employment relationship  
      dd) ‘Developed by an employee in the execution of his duties’  
      ee) ‘Following the instructions given by the employer’  
   f) Designs developed pursuant to a commission  

x  Research handbook on design law
6. Enablement and Indefiniteness in U.S. Design Patents after *In re Maatita* and *Ex parte Kaufman*  
*Margaret Polson*

I. Introduction 207

II. Background 208
   1. The enablement and indefiniteness requirement 208
   2. Subject matter of the design and scope of the claim 210
   3. Views of all sides of a three-dimensional object required? 210

III. *Ex parte Kaufman* 211
   1. The findings of the USPTO’s examiner 211
   2. The findings of the PTAB 212

IV. *In re Maatita* 212
   1. The findings of the USPTO’s examiner 213
   2. The findings of the PTAB 215
   3. The findings of the Federal Circuit 216

V. Applying *In re Maatita* to examples 217

VI. Some distinct criticism 222

VII. A supplementary view from Europe 224
   1. Determining the subject matter of a partial design 224
   2. Written text or context irrelevant 225
   3. Testing infringement of a partial design 227
   4. Testing validity of a partial design 228

VIII. Concluding remarks 229
Research handbook on design law

a) Territorial aspects when establishing unregistered Community design rights 234
b) Nature of acts establishing unregistered Community design rights 235
c) Ownership of an unregistered Community design right 237

2. United Kingdom 237
a) Nature of the U.K. unregistered design right 237
b) Requirement of a ‘qualifying design’ 239

IV. Proof of copying and remedies in case of an infringement of unregistered design rights 241

V. Disadvantages for non-EU entities? 242

VI. Comparison with ‘neighbouring’ rights 244
1. Copyright law 244
2. Trade mark law 244
3. Unfair competition and passing off 245
a) Passing off 245
b) Unfair competition 246

VII. Conclusion 248

8. Claiming Priority under the Community Design Scheme 250
Henning Hartwig
I. Priority requirements under international design law 251
II. Interaction between patent and design law 253

III. Who decides on a valid priority claim 256
1. When is the EUIPO called to examine priority? 256
2. When are infringement courts called to examine priority? 258

IV. What to decide: same subject matter, same design and date of priority 260
1. Same subject matter under the Paris Convention 260
2. Same design under the Community design scheme 261
3. Date of priority 262

V. Claiming priority: how to decide 263
1. Differences between priority claim and subsequent Community design 263
2. Differences between priority claim and asserted Community design 265
3. A test for reciprocity 267

VI. Multiple and partial priorities 269
VII. Internal priority 277
VIII. Conclusions 281

9. Enforcing Design Rights throughout Europe 283
Annette Kur
I. Introduction 283
II. Sanctions for design infringement 284
1. The Enforcement Directive 284
PART IV CRITICAL ISSUES

Annette Kur and Ádám György

I. Introduction

II. European Union

1. Spare part protection under design law
   a) Specific requirements for component parts
   b) ‘Must-fit’ and ‘must-match’ features
   c) ‘Freeze-plus’ and the withdrawn European Commission proposal
   d) The Community Designs Regulation
   e) The situation in the European Union (before 1 January 2021)
      aa) Community and national design law
      bb) Overlap with other IP rights

2. Competition law

3. New (or envisaged) legislation in Germany and France

4. Further harmonisation?
   a) The Economic Review
   b) The Legal Review
   c) ECTA

III. Other jurisdictions

1. United States
xiv  Research handbook on design law

a) Overview 320
b) Requirements for protection: ornamentality versus functionality 321
c) Design patent exhaustion and the right to repair 322
d) The proposed ‘repair clause’ 324
e) Antitrust considerations 326

2. Brazil 327
3. South Africa 331
4. Japan 333
5. Turkey 334
6. Australia 335

IV. International design law 338
1. Overview 338
2. Exclusion of spare parts from design protection 338
3. Repair clauses and the three-step test 339

V. Conclusions 341
1. Comparative summary 341
2. Summary of possible solutions 343

11. Design Protection for Graphical User Interfaces 345
Tracy-Gene G. Durkin

I. Introduction 345
II. GUI protection through different IP rights and in different jurisdictions 349
III. United States 351
1. History of design patent protection for GUI 351
2. Protecting GUI under design patent law 352
3. Enforcing GUI design patents 355

IV. China 359
1. History of design patent protection for GUI 359
2. Protecting GUI under Chinese design patent law 360
3. Enforcing GUI design patents 362

V. Japan 364
1. History of design protection for GUI 364
2. Protecting GUI under Japanese design law 365
3. Recent legislative developments 370

VI. Australia 370
1. History of design protection for GUI 370
2. Protecting GUI under Australian design law 373
3. Recent legislative developments 374

VII. Conclusion 375

12. ‘Mast-Jägermeister’ before the Court of Justice of the EU: What the Outcome Really Means 378
Henning Hartwig

I. Introduction 378
II. Subject matter of the designs at issue 380
III. Legal context and law 385
IV. Mast-Jägermeister's arguments and sole ground of appeal before the CJEU 385
V. The judgment in Mast-Jägermeister 388
VI. Inconsistency or ambiguity of views? 388
VII. Inconsistency between views and product indication? 390
VIII. Remedies in case of deficiencies? 396
IX. The German applications filed by Mast-Jägermeister 397
X. Conclusions 400

PART V TRANSNATIONAL AND COMPARATIVE DIMENSIONS

   Robert Mirko Stutz
   I. Status and prospects of the Hague Agreement 405
      1. History of origin 405
      2. Advantages of design rights acquired through the Hague Agreement 406
      3. Status quo 407
      4. Complicated coexistence of different regimes 408
      5. Goals of the Geneva Act: deposition of declarations 408
         a) Declarations to be deposited by Contracting Parties with an examining office 409
         b) Declarations to be deposited by any Contracting Party 409
         a) Republic of Korea 412
         b) United States 414
         c) Japan 416
         d) Russian Federation 418
         e) United Kingdom and Northern Ireland 420
         f) Canada 420
         g) Mexico 422
         h) People's Republic of China 423
         i) Appraising the enlargement of the geographical scope 424
      7. The Hague Working Group: its aims and goals 426
         a) Meetings held in 2011 and 2012 426
         b) Meetings held in 2013 and 2014 427
         c) Fifth meeting held in 2015 428
         d) Sixth meeting held in 2017 429
         e) Seventh meeting held in 2018 430
   II. Status and improvement of the Locarno Classification 430
      1. History of origin and status quo 430
      2. Prospects: still waiting for a new search system 431
   III. Proposal for a Design Law Treaty 434
      1. History of origin 435
2. Status quo
4. Relationship between the Design Law Treaty and the Hague Agreement

14. Three-Dimensional Trade Marks and Designs: Comparison and Conflict

Alexander von Mühlendahl

I. Introduction
II. Comparison
1. Registrability/protectability
   a) Trade marks
      aa) Representation: clarity and precision
      bb) Absolute grounds: distinctiveness
      cc) Earlier rights
   b) Designs
      aa) Clarity and precision: single design
      bb) Novelty and individual character
   c) Comparison
2. Absolute exclusions
   a) Trade marks
      aa) Shape resulting from the goods themselves
      bb) Shape necessary to obtain a technical result
      cc) Shape giving substantial value to the goods
   b) Designs
   c) Comparison
III. Conflicts between trade marks and designs
1. Earlier design and later trade mark
   a) Infringement of a design by the use of a trade mark
   b) Defences
   c) Invalidity
2. Earlier trade mark and later design
   a) Infringement of a trade mark by the use of a design
      aa) Trade mark use of a design
      bb) Conflict situations
      cc) Identity or similarity of the mark and the design
      dd) Similarity of goods
      ee) Infringing use
   b) Defences
   c) Invalidity
      aa) Distinctive sign
      bb) Trade mark use
      cc) Identical or similar signs
      dd) Similarity of goods or services
      ee) Contesting the validity of the earlier trade mark
      ff) Cases
Contents xvii

gg) Earlier distinctive sign as part of the relevant design corpus 476
hh) Maintenance in modified form 477
d) Conclusions 478
3. Comparison 479
IV. Summary 480

15. Cross-border Copyright Protection in Europe
   Uma Suthersanen
   I. Introduction: harmonisation and free movement 482
   II. The EU ‘principle of cumulation’: a historical legacy 485
      1. Comparative legal antecedents 485
   III. The EU ‘principle of cumulation’: modern interpretations 490
      1. Genesis of EU policy in Flos 490
      2. The dark horse: originality as interpreted in Cofemel and Brompton 492
      3. National approaches within the EU 493
         a) United Kingdom: abandoning the duration exception 493
         b) Germany: abandoning the Stufentheorie approach 495
         c) Italy: abandoning ‘artistic value’ 498
         d) France: Vive l’unité de l’art! 500
   IV. Conclusions 502
      1. Pre-emption of national sovereignty 502
      2. Changing socio-legal context 504

16. How Different is Different? Modern Neuroscience and its Impact on Design Law
   Charles Lee Mauro and Christopher Daniel Morley
   I. The changing business value of visual design and design intellectual property 507
   II. Data-driven decision-making in the modern world 509
   III. Emerging applications of neuroscience in law: neuroaesthetics 511
   IV. Why the finder of fact needs support from research data to better inform their design patent infringement decisions 513
      1. Inadequate training of judge and jury related to shape perception science 513
      2. Expert witnesses 515
   V. How we perceive shapes in the real world 516
      1. Overview of vision science and shape perception 516
      2. Information processing for shape perception and object recognition 516
         a) Bottom-up processing 517
         b) Top-down processing 518
      3. Critical principles related to shape perception and object recognition 520
Research handbook on design law

a) Cognitive minimisation 520
b) Canonical view 521
c) Gestalt principles of perception 521
d) Salience of parts of objects 522
4. Perceptual biases impact shape perception 523
5. Transformations of shapes do not impact shape perception 525
6. Impact of branding on shape perception 528
7. Individual differences in design sensitivity 530
VI. An empirical ordinary observer test 530
VII. Determining damages in a changing design patent litigation landscape
1. Apple v Samsung: a big win for defendants in design patent matters 533
2. Current summary judgment practices 534
3. How damages are calculated based on the recent Apple v Samsung ruling 535
VIII. The damages phase of design patent cases
1. What SCOTUS and the litigating parties missed 536
2. The criticality of component part patents 537
3. The use of canonical parts in product design and design patents 537
4. Why are there so few component part patent suits? 539
IX. The DOJ 4-Factor test
1. Making the DOJ framework workable in the context of design patent damages 540
2. Lack of factor prioritisation and logical flow model 540
3. Prioritisation is possible and supportable 541
4. Why the second DOJ Factor is the gating function: the brand extension test 541
5. The canonical-view test 542
6. Automatic override of the Factor 3 test (conceptually distinct) 542
7. Elimination of Factors 1 and 4 542
8. Application of Rule 289 (full profits) 543
9. The slippery slope of less than full profits under Rule 289 543
10. DOJ defines one step but leaves second step open 543
11. The use of DOJ Factors 1, 3 and 4 544
12. In utility patent cases, the courts set a high bar for apportionment and calculation of damages 544
13. In utility patent cases, supportable damage calculations often require consumer/user research 545
14. Apportionment research in a design patent case is not like apportionment research in a utility patent case 545
X. Advanced design research methods that generate reliable data on the value of visual design in product success 546
XI. Conclusion 548

Index 550
