---

One thread that runs through much of my research and writing is the link between individual well-being and health and organizational performance and success. Corporate wellness initiatives have emerged as a practical way to realize both of these important outcomes. I have worked with Astrid for several years but this is our first editorial project. Astrid did a terrific job in working with our contributors and Edward Elgar Publishing Ltd. I also thank our international authors for their important contributions. The staff at Edward Elgar were always supportive, particularly Fran O'Sullivan. My contributions were supported in part by York University, Canada.
