
Figures

4.1	Technoscientific reality-making in three steps	72
4.2	Entry points for engagement in the process of technoscientific reality-making	75
4.3	Contexts of practice, perspectives on science, and differing views of ‘science policy cultures’ on how relations of science and society could be intensified	77
4.4	Different conceptions of transdisciplinary research aligned with different science policy cultures	78
4.5	Formats of public engagement, how they represent ‘society’, and what kind of political order this implies	81
4.6	Mapping PEST in three dimensions: (a) entry points, (b) problematizations and purposes, and (c) practices of representing ‘society’	85
9.1	Australian Government investment in research and development 2017–18	170
9.2	Total CRC program funding	175
9.3	Higher education research income from CRCs	176
9.4	Higher education research income from Australian industry contracts	177
10.1	Jack Morton’s model of the Bell System	197
10.2	OECD	198
20.1	Number of organisations participating in EU research projects FP5, FP6, FP7 and H2020 by country group	409
20.2	Organisations participating in EU research programmes FP5, FP6, FP7 and H2020 by CEE country	410
20.3	International research co-publications per million population	411
20.4	Business R&D expenditure as a percentage of GDP, EU28 and CEE countries	412
20.5	EPO patent applications with foreign inventors EU28 average, CEE country average, rest-EU average	413
20.6	Average share of co-patents in the UK	414
20.7	Flow of funds between the UK and EU, 2007–2013 (€ billion)	415
21.1	Modification of exercise of authority by epistemic properties	434
21.2	Modification of researchers’ responses by epistemic properties	440
