

Figures and tables

FIGURES

3.1	Representation of successful entrepreneurs	27
4.1	Recursive process model of institutional change in erratic environments	47
5.1	Proposed model	61
5A.1	SEM paths	85
6.1	Framework for understanding the link between human capital and entrepreneurial self-efficacy	91
7.1	The competition's logo	120
7.2	Promotional illustration	121
7.3	Awards ceremony, 2011	122

TABLES

2.1	Main differences between countries before and during the 'transition' leading to establishment of different socioeconomic and political orders	9
2.2	Variety of entrepreneurial types – by motivation and sources of rent	10
2.3	Indicators of the quality of the EFC and entrepreneurial activity in 'transitional' GEM countries	15
2.4	Different groups of 'transitional' economies by the EFC and entrepreneurial activity quality indicators	16
2.5	Most important differences in institutional settings between economies and societies with 'free' and 'limited' access orders	18
4.1	Agency-dominated institutional change process	38
5.1	Reliability and convergent validity analysis	63
5.2	Direct effect of university/social environments on start-up intentions	72
5.3	Indirect effect of university/social environments on start-up intentions	73

5.4	Mediation effect of cognitive factors in the relationship between environments and intentions	76
5A.1	Discriminant validity	86
6.1	Factor loadings of roles and tasks related to entrepreneurial self-efficacy	96
6.2	Descriptive statistics and correlation matrix for modelled constructs (N = 443)	98
6.3	Results of robust regression of entrepreneurial self-efficacy (N = 443)	101
7.1	Sample coding units and narrative themes	118
8.1	Overview of family business cases	133
8.2	Individual-based explanations of succession	135
8.3	Socialization experiences	138
8.4	Household, macro and meso environmental considerations	140
9.1	The case organizations	158
9.2	Summary of the analysis	166
