Contributors

Jennifer E. Baka is Assistant Professor of Geography at Pennsylvania State University, USA. She conducts interdisciplinary research on energy geography using research methods from political and industrial ecology. Her current research examines the socio-environmental impacts of biofuel promotion in India and the participatory processes of hydraulic fracturing governance in the USA. Jennifer has published in a variety of geography, development studies, environmental science and energy policy journals. Prior to joining Penn State, she was an Assistant Professor of Geography and Environment at the London School of Economics and Political Science. She holds a PhD in Environmental Studies from the Yale School of Forestry and Environmental Studies and an MS in Public Policy from the University of California, Berkeley.

Ryan E. Baxter is Senior Researcher and Instructor in the Dutton e-Education Institute and the Department of Geography at Pennsylvania State University, USA. He develops and teaches courses within the Penn State Online Geospatial Program, and specializes in cloud and server GIS technology. Ryan is also active in research projects at Penn State’s Institutes of Energy & the Environment that span two topical areas: spatial data management and the land use implications of renewable energy production. He is the lead developer for the Pennsylvania Spatial Data Access clearinghouse (PASDA) and studies the potential land resources for producing bioenergy crops, such as switchgrass on abandoned cropland and winter rye as a double crop in existing agricultural systems.

Karen Bickerstaff is Associate Professor of Geography at the University of Exeter, UK. Her research is concerned with the geographical and ethical dimensions of public engagements with environmental risk and change. Her research is inter-disciplinary and ties issues of risk, energy and climate to fundamentally geographical questions about the nature of knowledge, the means and ends of political participation and the experience of environmental injustice. Karen's work falls into three main topics: making energy transitions public, understanding environmental justice, and risk and knowledge. She has published widely in journals such as Energy Policy, Geoforum, Antipode, Environment and Planning A and International Journal of Urban and Regional Research. She is also the lead editor of Energy Justice in a Changing Climate: Social Equity and Low-Carbon Energy (2013).

Philippe Le Billon is Professor at the University of British Columbia, Canada, with the Department of Geography and the Liu Institute for Global Issues. He holds an MBA (Paris 1) and PhD (Oxford). Previously, he was Research Associate with the Overseas Development Institute and the International Institute for Strategic Studies. Working on linkages between environment, development and security, Philippe has published widely on natural resource governance and investigates socio-environmental relations and commodity networks linking spaces of exploitation, consumption and regulation. Such work engages with the spatiality, materiality and socio-natural construction of ‘resources’, their political economy and socio-environmental impacts, as well as associated conflicts and
Handbook on the geographies of energy

development challenges. He has published over 40 refereed papers and 25 book chapters. His latest books are Oil, second edition (with Gavin Bridge, 2017); Corruption, Natural Resources and Development (with Aled Williams, Edward Elgar, 2017) and Wars of Plunder: Conflicts, Profits and the Politics of Resources (2014).

M. Jean Blair is a doctoral candidate at Queen's University, Canada, in the Department of Geography and Planning. Her work focuses on bioenergy supply chain and policy analysis within the context of energy system innovation and sustainable energy transitions. It combines techno-economic analysis of potential bioenergy pathways with an assessment of the socio-ecological impacts of the same pathways. This work is supported by an NSERC Alexander Graham Bell CGS-D scholarship. Jean also manages a project on bioenergy supply chains within the national bioenergy research network, BioFuelNet. In addition to this academic work, Jean plays a role in the implementation of bioenergy projects through her position as Research Associate with TorchLight Bioresources. Jean holds an MSc in Geography from Queen’s University.

Stefan Bouzarovski is Professor of Geography at the University of Manchester, UK, and Director of the Collaboratory for Urban Resilience and Energy within the Manchester Urban Institute. He is also External Professor at the Department of Economic Geography, University of Gdansk, Poland, and a Visiting Professor at the Department of Geography, University of Bergen, Norway. Stefan is an internationally leading expert in energy and urban policy, with a particular focus on energy poverty in Europe. He has previously held full-time appointments at the universities of Oxford, London and Birmingham, and visiting professorships at universities in Prague, Berlin, Stockholm, Bruges and Brisbane. His work has been featured in over 80 scientific and policy publications, including the books Energy Poverty in Eastern Europe (2007) and The Routledge Research Companion to Energy Geographies (co-edited with Martin J. Pasqualetti and Vanesa Castán Broto, 2017). Its outcomes have informed the work of the European Union, World Bank and International Energy Agency.

Gavin Bridge is Professor of Geography at Durham University, UK. Previously, he was on the faculty at the University of Manchester. His research interests include geographies of energy transitions and governance; questions of property, access and control associated with ‘new geographies’ of resource production and consumption; the organization of global production networks for raw materials, particularly those associated with old and new ‘carbon economies’; political ecologies of resource scarcity and security; and the ways in which the material character of ‘biophysical’ resources shapes their appropriation, commodification and marketization. Gavin is widely published in energy and climate policy and in a variety of geography journals including Economic Geography, Journal of Economic Geography, Progress in Human Geography, The Professional Geographer, GeoForum, Antipode, Environment and Planning A and The Geographical Journal. His latest books include The Routledge Handbook of Political Ecology (co-edited with Tom Perreault and James McCarthy, 2015) and Oil, second edition (with Philippe Le Billon, 2017).

Kevin Burchell is Senior Research Fellow in the Policy Studies Institute at the University of Westminster, UK, where he is also Deputy Research Director in the Faculty of Architecture and the Built Environment. He is an interpretive/critical social scientist, with

Barry D. Solomon and Kirby E. Calvert - 9781785365621

via free access
a focus on producing research that is of value across academic, policy and practitioner
domains. He has published widely in papers and reports on domestic energy, climate
adaptation and resilience, smart meters, behavior and practice, domestic energy and
knowledge, community action and participation, participatory action research, public
engagement and public dialogue, and critical social marketing.

Laura Cabral is an MS candidate in Transportation Engineering at the University
of Alberta, Canada. She has a BS in Environmental Science from the Université de Sherbrooke, Canada.

Vanesa Castán Broto is Senior Lecturer in the Bartlett Development Planning Unit at
University College London, UK, where she directs the MSc Environment and Sustainable
Development. Her research addresses the conundrum of how to achieve simultaneously
universal energy access and a transition to a low-carbon society. Vanesa advocates partici-
patory, bottom-up approaches to environmental governance. She has worked with inter-
national organizations such as UN-Habitat, United Nations Environment Programme
and the World Health Organization. She was a lead chapter author for the 2016 World
Cities Report (wcr.unhabitat.org). Her books include An Urban Politics of Climate
Change (with Harriet A. Bulkeley and Gareth A.S. Edwards, 2015) and Participatory
Planning for Climate Compatible Development in Maputo, Mozambique (co-edited with
Jonathan Enser, Emily Boyd, Charlotte Allen, Carlos Seventine and Domingos Augusto
Macucule, 2015, available for download open access at https://www.ucl.ac.uk/ucl-press/
browse-books/participatory-planning-for-climate-compatible-development-in-maputo).
In 2013, her work about planning for climate change in Mozambique was recognized as a
Lighthouse Activity for the Urban Poor by the United Nations Framework Convention
on Climate Change (UNFCCC). In 2016 Vanesa was awarded the Philip Leverhulme
Prize for contributions to Geography.

Deepti Chatti is a doctoral candidate at Yale University, USA, in the School of Forestry
and Environmental Studies. Her doctoral dissertation is a study of the political ecology
of household energy transitions in rural India. She is conducting a multi-sited ethnogra-
phy to understand the local, regional, national, international and cross-scale dimensions
of energy transitions. Deepti’s research brings together themes relevant to critical energy
geography, household energy studies, anthropology of development, environmental
anthropology, South Asia studies and science and technology studies. She relies on her
diverse training in engineering and anthropology to incorporate human dimensions into
energy research. Deepti has an MPhil in environmental studies from Yale University and
an MS in Environmental Engineering and Science from Stanford University.

Peter M. Connor is Senior Lecturer in Renewable Energy Policy at the University of Exeter,
UK. He researches deployment and industrial policy and regulatory issues across multiple
renewable energy technologies including ocean energy technologies and renewable heat.
He is currently researching in the area of smarter grids as an enabler of large-scale and
small-scale renewable generation rollouts, and is concerned with policy and regulation for
enabling new markets and services and the stimulation of new network innovation. His
energy research results have been published in a wide variety of journals, including Energy
Policy, Energy Economics and Renewable and Sustainable Energy Reviews as well as by the
Intergovernmental Panel on Climate Change.
Ethan B. Davis is a doctoral candidate in Ecology in the Department of Geography at Pennsylvania State University, USA. Prior to this he worked as an energy analyst at the Union of Concerned Scientists and Dartmouth College. He also worked as a research assistant for the US Department of Energy at Oak Ridge National Laboratory. Ethan helped develop Green-e certification standards for bioenergy. His research focuses on greenhouse gas emissions associated with energy production and use and also examines carbon mitigation from forest sequestration. He uses geospatial data sets to examine land use patterns associated with renewable energy in terms of greenhouse gas emissions and food security. He has published in a variety of journals and technical reports.

Nichole Dusyk is Postdoctoral Fellow in Resource and Environmental Management at Simon Fraser University, Canada. Her research is focused on the intersection of energy governance and participatory politics especially as it relates to knowledge production, public engagement and environmental subjectivities. Nichole’s doctoral research examined case studies of municipal energy planning, large-scale hydroelectricity and wind energy. Her postdoctoral research investigates environmental citizenship and pipeline development in Canada. It considers regulatory and institutional changes that have influenced opportunities for public engagement, media and policy discourses that rationalize or subvert such changes, and the related motivations and narratives of advocates opposed to pipeline development. She has an MS in Science and Technology Studies from Rensselaer Polytechnic Institute and a PhD in Resource Management and Environmental Studies from the University of British Columbia.

Kajsa Ellegård is Professor of Technology and Social Change at Linköping University, Sweden. She graduated in Human Geography at Gothenburg University. She was a member of the Research group in Human Geographic Process and System Analysis at Lund University, led by Professor Torsten Hägerstrand, the founder of time-geography. She edited the final book by Torsten Hägerstrand, Tillvaroväven (the English title is The Fabric of Existence) (edited with Uno Svedin, 2009). She has developed a time-geographic diary method and published international articles on energy use in households emphasizing the difference between individual and household – and on time-geography. She is currently writing a reader in Time-Geography.

Christophe Enaux is Professor of Geography at Strasbourg University, France, where he co-directs the graduate program in environmental geography. As a member of the research unit LIVE (UMR 7362 University of Strasbourg-CNRS), his own research focuses on mobility behaviors, physical activity in daily mobility and energy consumption related to mobility behaviors. Christophe is also using geospatial tools to build and implement at a local scale a territory characterization system for energy consumption, in order to better support spatial planning. He has published in a variety of journals in transport geography, behavioral and health studies, among others.

Karl-Heinz Erb is Associate Professor for Land Use and Global Change at Alpen-Adria Universitaet Klagenfurt-Wien-Graz, at the Institute for Social Ecology, Austria. Karl-Heinz’s research interests include the interactions between humans and global environmental systems; land system science; understanding the interrelation of socio-economic material and energy flows and land use, land use change and land cover change; land use and its consequences for ecosystem structures and functioning; development and
collation of global land use data sets; human appropriation of net primary production; human impacts on the global carbon cycle; methods of carbon accounting; environmental indicators; and socio-ecological metabolism. He has published widely in journals such as Proceedings of the National Academy of Sciences of the United States of America, Land Use Policy, Ecological Economics and Current Opinion in Environmental Sustainability.

Mary Finley-Brook is Associate Professor of Geography, Environmental Studies and International Studies at the University of Richmond, USA. Her transnational research focuses on the politics and economics of renewable and non-renewable energies, environmental justice, climate change policy and sustainable development. Mary has published in journals such as the Annals of the American Association of Geographers, Water Alternatives, Geopolitics and Bulletin of Latin American Research. She is working on a book titled Deadly Energy examining violence and toxicity in marginalized communities and spaces in the wake of poorly planned and executed energy projects. Mary critiques lobbying and public campaigns against energy justice given the broad availability of sustainable, economically viable alternatives.

Daniel Fitzpatrick is Lecturer in Politics and International Relations at Aston University, UK, where he is a member of the Aston Centre for Europe (ACE). His key area of expertise and research is the politics of regulation. Daniel has published several book chapters and journal articles on the governance of public utilities, the environment, sport and finance.

Philippe Gerber is Senior Research Fellow in Geography, with an expertise in daily and residential mobility in the Public Research Centre LISER (Luxembourg Institute in Socio-Economic Research). He is developing several research projects where the main objectives are modeling and simulating mobility behaviors considering urban constraints. In particular, Philippe's expertise deals with spatial and econometric analysis including contextual measures at the meso level and attitudes or beliefs at the micro level to better understand how the life-oriented approach of individuals interact with urban environments and promote sustainable mobility. He is also Lecturer at the University of Luxembourg, Lorraine, Aix-Marseille and Research Associate at CNRS in France. Philippe has published in several recognized journals in the areas of transport, geography, health, demography and urban studies.

Jessica K. Graybill is Associate Professor of Geography and Director of the Russian & Eurasian Studies Program at Colgate University, USA. Jessica’s primary research interests are urban and socio-environmental transformations, especially as they relate to the impacts on communities of resource extraction and climate change. Her focus in Eurasia is on the Far East and North and on the cultural and socio-economic changes associated with urban change in other contexts. She is a recipient of American Council for Learned Societies and Fulbright Fellowships, awarded for research related to resource use, extraction and climate change in the Russian Far East and North. Jessica is the editor of Polar Geography and has published in a variety of geography journals. She is also co-editor of Cities of the World, sixth edition (with Stanley D. Brunn, Maureen Hays-Mitchell and Donald J. Zeigler, 2016). Jessica holds a PhD in Geography and Urban Ecology from the University of Washington.

Julia H. Haggerty is Assistant Professor of Geography in the Earth Sciences Department at Montana State University, USA. Julia teaches in the areas of human geography, geography of energy resources, resource geography and regional studies. Her research focuses on interactions between natural resource development and the well-being of rural communities and landscapes. Previously, Julia was policy analyst at Headwaters Economics, a regional non-profit research consultancy, where she worked closely with local, state and regional policy makers to assess impacts of energy development. She holds a PhD in History from the University of Colorado and was a Postdoctoral Fellow at the Centre for the Study of Agriculture, Food and Environment at the University of Otago. Her research has been published in journals such as Science, Geoforum, Growth and Change, Energy Economics and Society and Natural Resources.

Helene Haniotou is Associate Professor at the National Technical University of Athens (NTUA), Greece, and Director of the Laboratory of Urban Design. Helene teaches urban theories and design and her research interests focus on new technologies, networks, urban mobility, morphology and landscape. She has taught in France and Canada and worked in Belgium for the European Commission (Directorate General for the Environment) as a consultant. She has several publications and distinctions in architecture. Helene is an associate researcher at the Laboratoire Image, Ville, Environnement (UMR 7362 CNRS-University of Strasbourg), France.

Conor Harrison is Assistant Professor in the Department of Geography and School of Earth, Ocean and Environment at the University of South Carolina, USA. His research examines the relationship between energy and society, with a particular focus on political economy and power relations. Conor has carried out fieldwork on historical and contemporary energy systems in North Carolina and the Caribbean, and his publications investigate energy in relation to questions of race, finance and uneven development. His work has been published in the Annals of the American Association of Geographers, Geoforum, Local Environment and Journal of Geography in Higher Education, where he co-edited a special issue on teaching energy geographies.

Arielle Hesse is a doctoral candidate at Pennsylvania State University in the Departments of Geography and Women’s, Gender, and Sexuality Studies. Trained as a feminist health geographer, her research interests lie at the intersection of energy, health and labor. Arielle’s current research considers the relationship between the state and human health.
within the hydraulic fracturing industry in the USA. By analysing mechanisms that the state uses to regulate workers’ health, namely, occupational health regulation and workers’ compensation programs, her research illustrates the implications of the spatial and scalar dynamics intrinsic to the way the state fulfills its responsibilities for human health. Prior to studying at Penn State, Arielle received her MSc in Geographical Sciences from the University of Bristol.

**Ping Huang** is Postdoctoral Fellow in the Bartlett Development Planning Unit at University College London, UK. His research focuses on urban energy transitions from both socio-technical and socio-spatial perspectives, with emphasis on the interdependency between energy transitions and reproduction of urban processes. In particular, Ping’s research on urban energy transitions aims to answer the key research question: ‘Why does energy innovation and, hence, urban energy transitions, occur in one city but not in another?’. Ping is also using Technological Innovation System (TIS) framework to explore innovation process and innovation policy in Chinese renewable energy industries. He has published in journals such as *Renewable and Sustainable Energy Reviews* and *Technological Forecasting and Social Change*.

**Philip Johnstone** is Research Fellow at the Science Policy Research Unit (SPRU), University of Sussex, UK. Phil is a human geographer interested in the political and democratic implications of technological change, and currently works on a research project on disruptive innovation, industrial policy and institutional dynamics in the energy sector. He has a particular interest in nuclear power issues, including research on the relations between the civilian and military programs in the UK and Brazil. Phil has also written on the governance of radioactive waste, and the role of democratic cultures in understanding divergences in nuclear policy.

**Fridolin Krausmann** is Professor of Sustainable Resource Use at the Institute of Social Ecology at Alpen-Adria University in Vienna, Austria. He investigates socio-metabolic transition processes and studies long-term changes in the use of energy, materials and land in local rural and urban systems, in national economies and at the global scale. Fridolin has co-authored numerous articles in peer-reviewed journals in industrial ecology, ecological economics and land use science. Together with Helmut Haberl, Marina Fischer-Kowalski and Verena Winiwarter, he co-edited *Social Ecology: Society-Nature Interaction Across Time and Space* (2016).

**Hayley Leck** is Post-Doctoral Research Associate in the Geography Department at King’s College London, UK. Her research focuses on the governance of climate adaptation, urban resilience and the social and policy elements of urban disaster risk. She is a lead researcher on the Urban Africa Risk Knowledge (Urban ARK) program. Hayley has co-authored several special issue journal editions and published in a variety of journals and edited books on urban studies, geography and environmental sustainability. Her publications have focused on urban and multi-scalar dynamics of climate change adaptation, particularly in Southern African contexts, as well as the water-energy-food nexus.

**Angela Livino** is an Advisor to the CEO at EPE (Energy Research Office, Brazil’s agency for power planning) and was a Doctoral Fellow in the Sustainability Science Program at Harvard Kennedy School’s Mossavar-Rahmani Center for Business & Government. Prior
to that, she was a senior engineer at Operador Nacional do Sistema Elétrico (National Power System Operator – ONS). She received a PhD in Water Resources at the Civil Engineering Program at the Federal University of Rio de Janeiro (2015). Her doctoral research focused on the inventory potential of hydropower with storage capacity in Brazil, where she analysed the historical changes in the storage capacity and their implication for the operation of the interconnected electrical system and proposed some regulatory and technical solutions.

Kevin Lo is Assistant Professor of Geography at Hong Kong Baptist University and founding editor of the Journal of Asian Energy Studies. He is also Visiting Professor at the Chinese Academy of Sciences. As an energy geographer, Kevin’s research involves understanding energy systems and challenges from spatial, regional and governance perspectives. He has published in many leading journals, including Renewable and Sustainable Energy Reviews, Energy Policy, Energy for Sustainable Development, Energies and Environmental Science & Policy.

Edward P. Louie is a doctoral student at Oregon State University, USA, in the School of Public Policy. Edward’s dissertation is on how the building industry and aspects of building codes can create incentives or disincentives for energy efficiency. His interview-based research includes rural and urban sites that are at varying positions in terms of capacity for building energy efficiency. Previously, Edward studied the feasibility of reusing flooded underground mines for geothermal energy, the cost to retrain coal-mining and coal-fired power plant workers for the US solar energy industry, and how some US electric utilities discourage renewable energy adoption. He has also worked in and with communities to advance adoption of residential energy efficiency retrofits. Edward has an MS in Energy Policy from Michigan Technological University. He has published in Energy Economics and in Handbook on the Geographies of Technology (Edward Elgar, 2017).

Warren E. Mabee is Professor and Head in the Department of Geography and Planning at Queen’s University, Canada. Warren holds a Canada Research Chair (Tier 2) in Renewable Energy Development and Implementation, and cross appointments in the Schools of Policy Studies and Environmental Studies. His international research program focuses on the interface between policy and technology in the area of renewable energy and fuels, addressing issues that bridge the gap between researchers and decision makers using tools such as life cycle assessment, geographic information systems and agent-based logistical models. Warren has published in a variety of journals in geography, energy policy, bioresource technology and forestry.

Stephen M. McCauley is Assistant Teaching Professor in the Interdisciplinary and Global Studies Division at Worcester Polytechnic Institute (WPI), USA, and Co-Director of WPI’s Melbourne Project Center. A geographer by training, Stephen’s work focuses on urban sustainability, community and regional planning and energy-society interactions. He bridges sustainable planning and policy agendas with community-based practice, environmental justice and grassroots innovation. Stephen is published widely in peer-reviewed journals and has consulted on eco-city planning and urban sustainability initiatives in US cities and in China. Stephen is also interested in the practice and scholarship of project-based learning. Through WPI’s Global Projects Program, he has advised over 30 immersive, action-research projects linking students with community partners in Massachusetts, Morocco, South Africa, India and Washington, DC.
Bruce Mitchell, FRSC, is Distinguished Professor Emeritus in the Department of Geography and Environmental Management at the University of Waterloo in Ontario, Canada. His research interests are on policy and governance related to natural resource and environmental management, with a particular focus on facilitating effective implementation of integrated water resources management. As well as in Canada, Bruce has conducted research and provided advice to governments in Australia, Britain, China, India, Indonesia and Nigeria. He is a Past President of the Canadian Water Resources Association and is Fellow of the Royal Society of Canada and Fellow of the International Water Resources Association. He is an honorary professor at five Chinese universities (Dalian University of Technology, Nanjing University, Shanghai Jiao Tong University, Shenyang University, Xi’an Jiao Tong University).

Dustin Mulvaney is Associate Professor in the Department of Environmental Studies at San Jose State University, USA, where he teaches classes related to sustainable energy. Dustin previously was a National Science Foundation Science & Technology Studies Postdoctoral Scholar in the Department of Environmental Science, Policy, and Management at the University of California, Berkeley, most recently a Visiting Scholar with the Bill Lane Center for the American West at Stanford University. His contributions to research in political ecology and science and technology studies include work on environmental justice, solar energy commodity chains, public lands and energy development in the American West, and the book *Solar Power: Innovation, Sustainability, Environmental Justice* (2017). He is co-editor of the Energy and the Environment section of *Case Studies in the Environment*. Dustin has a PhD in Environmental Studies from the University of California, Santa Cruz and an MS in Environmental Policy Studies from the New Jersey Institute of Technology.

Maria Niedertscheider is Researcher and Lecturer at the Institute of Social Ecology, Alpen-Adria University Klagenfurt, Wien, Graz, Austria, where she completed her PhD. Maria has a strong interdisciplinary background and holds an MS in Ecology from the University of Vienna. Her research is on land use change with a particular emphasis on carbon stocks and flows at different spatial and temporal scales. Maria’s research interests include the analysis of land use intensity changes and their effects on land systems, as well as their long-term socio-economic drivers. She has expertise in spatial modeling and has worked on several international research projects.

Jenny Palm is Professor at the International Institute for Industrial Environmental Economics at Lund University, Sweden. She was previously Professor in Technology and Social Change at Linköping University. Jenny is also a member of the Swedish National Council for Nuclear Waste, an advisory council for the Swedish government on nuclear waste. Her research interests concern users’ and prosumers’ (consumers that produce electricity) role in the energy system, how energy is embedded in the use of buildings, and how urban and regional planning provides the conditions for how energy systems evolve and for how we use energy. Jenny has published in a variety of journals in energy policy, local environment and science and technology studies.

Paul Parker is Professor in the Department of Geography and Environmental Management and Director of the Economic Development Program at the University of Waterloo, Canada. Paul is a founding member of the Sustainable Energy Policy Group, Waterloo
Institute for Sustainable Energy and Residential Energy Efficiency Project (REEP). He chaired the design team for the REEP House for Sustainable Living and studies high-performance net zero buildings and communities. He specializes in the policy, behavioral and community dimensions of energy transformation and often works with engineering colleagues on major projects. Paul’s work on community energy planning includes increasing the role of renewable energy in remote aboriginal communities. He has worked with colleagues across Canada and in Australia, China, Europe, Japan and Chile. He has published in a variety of journals in geography, energy policy, economic development and environmental studies.

**Martin J. Pasqualetti** is Professor of Geography, Senior Sustainability Scientist and Director of the Energy Policy Information Council at Arizona State University, USA. Martin co-founded the Energy Specialty Group within the American Association of Geographers in 1979. He has examined several themes, including energy as a social issue, the food/energy/water nexus, energy landscape development and public acceptance of renewable energy technology. He served two Arizona governors as Chairman of the Arizona Solar Energy Advisory Council, and was a founding member of the Arizona Solar Center. Martin completed pioneering work on the social costs of wind power and has several publications on that subject including *Wind Power in View* (co-edited with Paul Gipe and Robert W. Righter, 2002). In 2015, he received the Alexander and Ilse Melamid Gold Medal from the American Geographical Society for his international contributions to energy studies. His latest book is *The Renewable Energy Landscape: Preserving Scenic Values in Our Sustainable Future* (co-edited with Dean Apostol, James Palmer, Richard Smardon and Robert Sullivan, 2017).

**Saska Petrova** is Lecturer in Human Geography at the School of Environment, Education and Development at the University of Manchester, UK. She is also the Research Coordinator of the Collaboratory for Urban Resilience and Energy within the Manchester Urban Institute. Her work focuses on how low-carbon urban transitions affect vulnerable and governable people and communities. A main research interest is on energy poverty and vulnerability. Saska has published extensively on these issues, including a monograph on *Communities in Transition* (2014) as well as articles in scientific journals such as *Environment and Planning A, Area, GeoForum, GeoJournal* and *Energy Policy*. Saska has extensive professional background as a public advocate and consultant for a range of government institutions and think tanks.

**Paolo Picchi** is landscape architect and President of AIAPP in Rome (Italian Association of Landscape Architecture). Paolo holds a PhD from Trento University and is a member of the NRGlab at Wageningen University, the Netherlands. His PhD research concerned the relationship between the landscapes of energy transition and the Ecosystem Services. The research specifically aimed to introduce an Ecosystem Services approach into the planning and design of sustainable energy landscapes. Paolo lectures at conferences and seminars across Europe, for example, the IFLA 2016 World Congress in Turin where he discussed the role of the landscape architect in local renewable energy organizations. He has published book chapters, essays and papers in the field of landscape architecture and landscape ecology.

**E. Jeffrey Popke** is Professor in the Department of Geography, Planning, and Environment at East Carolina University, USA. Jeff’s research draws upon social theory and theories
of ethics to better understand the uneven geographies and local dynamics of socio-spatial change. He has conducted fieldwork into the social geographies and livelihood strategies of communities in South Africa, Mexico, the Caribbean and the US South. His current research is focused around a multi-year collaborative project that utilizes a mixed-methods research design to investigate the intersecting dynamics of climate change, agriculture and energy transitions in Jamaica and the Eastern Caribbean. Jeff has published widely in journals such as *Annals of the American Association of Geographers*, *Area*, *GeoForum*, *Urban Geography* and *Progress in Human Geography*.

**Neil Simcock** is Research Associate at the University of Manchester, UK, where he works on the Energy Vulnerability and Urban Transitions in Europe (EVALUATE) project. He worked previously at Keele University and Lancaster University. Neil’s research expertise focuses on social and environmental justice, inequalities, poverty and vulnerability in the context of low-carbon energy transitions. He has published on these topics in several journals including *Local Environment*, *Energy Research & Social Science*, *Land Use Policy* and *Energy Policy*. He was co-guest editor of a special issue of *Energy Research & Social Science* on ‘Energy demand for mobility and domestic life: new insights from energy justice’ (Volume 18, 2016).

**Helen C.M. Smith** is Lecturer in Offshore Renewable Energy at the University of Exeter, UK, where she contributes to the BEng and MEng Energy Engineering and BSc and MSc Renewable Energy programs. Helen’s primary research area is resource assessment for offshore energy developments, assessing the availability of wave and tidal energy and its spatial and temporal variability. This work provides an important link between the natural environment and the engineering applications required to develop the industry further. A key focus of her research is the application and development of numerical models for both resource prediction and the assessment of potential impacts over wide spatial scales due to energy extraction and conversion by marine energy devices.

**Jamie D. Stephen** is founder and Managing Director of TorchLight Bioresources in Canada, a cleantech and bioproducts consulting and project management company. Jamie is a Fellow at Queen’s University and the Program Director of the BioCleantech Forum. His work ranges from enterprise strategy and policy analysis to fuel and conversion technology assessment. Jamie has managed cleantech and bioproduct projects for a variety of public and private sector clients including technology developers, investment funds, national and provincial governments, First Nations, start-ups and Fortune 100 companies. Projects have focused on industrial growth strategies, facility feasibility, technology deployment hurdles and investment prioritization. Jamie holds an MS in Chemical and Biological Engineering and a PhD in Cleantech Economics from the University of British Columbia. He has published numerous reports and papers on bioenergy and bioproduct investment, operating risk and industry advancement.

**Jennie C. Stephens** is Dean’s Professor of Sustainability Science & Policy at Northeastern University’s School of Public Policy & Urban Affairs in Boston, USA. Jennie’s research, teaching and community engagements focus on social and political aspects of the renewable energy transition, reducing reliance on fossil fuels, and strengthening societal resilience by responding to climate change. Her work explores institutional and cultural innovation in the energy sector, including gender diversity and energy democracy,
technological optimism with regard to climate mitigation, and the ‘usability’ of climate science in climate mitigation and adaptation. Jennie is a 2015–16 Leopold Leadership Fellow, and her book *Smart Grid (R)Evolution: Electric Power Struggles* (with Elizabeth J. Wilson and Tarla Rai Peterson, 2015) explores social and cultural debates about energy system change. Before joining Northeastern University, she held the Blittersdorf Professorship at the University of Vermont and was on the faculty at Clark University.

**Robert Stock** is Senior Scholar, retired from the Department of Geography at the University of Winnipeg, Canada. His research has focused on rural development, primarily in relation to environment-society relationships and health care services in Nigeria. Robert has published in journals such as *Social Science & Medicine*, *International Journal of Health Services* and *Review of African Political Economy*. He is the author of *Africa South of the Sahara: A Geographical Interpretation* (2012), which is in its third edition.

**Sven Stremke** is Associate Professor of Landscape Architecture at Wageningen University and Professor of Landscape Architecture at the Amsterdam Academy of Architecture, the Netherlands, Principal Investigator at the Amsterdam Institute for Advanced Metropolitan Solutions (AMS) and founding Director of the NRGlab, a research laboratory on energy landscapes. His research and teaching focus on the relations between renewable energy technologies and landscapes, both in the rural and urban environment. Sven has published on the planning and design of sustainable energy landscapes in books and journals such as *Environment and Planning B, Landscape Journal, International Journal of Sustainable Building Technology and Urban Design* and *Sustainability*. With Andy van den Dobbelsteen, he edited *Sustainable Energy Landscapes: Designing, Planning, and Development* (2013). Sven conducts research projects for various research agencies, ministries, provincial and regional governments in the Netherlands and other countries. He is member of several scientific committees and supervises PhD students working on the energy-landscape nexus.

**Matthew J. Taylor** is Professor of Geography and Graduate Program Director in the Department of Geography and Environment at the University of Denver, USA. Matthew’s research is on human-environment relationships in Latin America, with most of his fieldwork conducted in Guatemala and Nicaragua. His publications range from inquiries into the impact of drug smuggling on Central America’s forests to the relationships between human migration and natural resources in Central America. Matthew has published in scholarly journals such as *Science, Annals of the American Association of Geographers, Geographical Review, Geoforum, Population and Environment* and *Environment and Planning C*.

**Harriet Thomson** is Postdoctoral Research Associate within the Collaboratory for Urban Resilience and Energy at the University of Manchester, UK, and associate editor of the international journal *Energy Research & Social Science*. She is project manager of the European Commission-funded European Energy Poverty Observatory. Harriet’s background is in comparative social policy, and her doctoral research, which she undertook at the University of York, examined energy poverty in the European Union (EU). Her research interests broadly concern institutional theory, the EU polity, renewable energy, climate change and domestic energy deprivation. Harriet has published in a variety of journals across energy policy, social policy and public health, and co-edited a book

**Mauricio T. Tolmasquim** is Professor at the Federal University of Rio de Janeiro, Brazil, and Non-Resident Fellow at Harvard University’s John F. Kennedy School of Government, USA. Mauricio served as the Chief Executive Officer of Empresa de Pesquisa Energética (EPE), Brazil’s planning authority. Prior to EPE, he was Deputy Minister and Interim Minister of Mines and Energy, leading the technical working group responsible for the institutional reform of the Brazilian power sector. Mauricio was awarded the degree of Grand Officer of the Order of Rio Branco, established by the Foreign Ministry of Brazil for distinguishing meritorious service and civic virtues. He is a member of the Brazilian Academy of Engineering. He has supervised hundreds of Masters’ and PhD theses and delivered lectures at about 500 events in Brazil and other countries. He is the organizer, author or co-author of 25 books and over 100 technical articles.

**Dan van der Horst** is Senior Lecturer in Environment and Society and Deputy Director of Research in the School of Geosciences at the University of Edinburgh, UK. His research seeks to further the critical understanding of why and how people and politics resist and subvert the ‘technically sustainable’ use of renewable resources, but he also aspires to know ‘how to do better’ multi-functionality, adaptive management and conflict mitigation in crowded spaces. Dan’s academic attention stretches from (landscape) ecology to (renewable energy) technology and from the global North to the South, and focuses on themes such as energy-society transitions, energy-landscape conflicts and the water-energy-food nexus. He has published widely in various journals in geography, energy and ecology.

**Michael J. Watts** is Professor Emeritus of Geography and Development Studies at the University of California at Berkeley, USA. An intensively productive scholar, Michael works on a variety of themes from African development to contemporary geopolitics, social movements and oil politics. His work has charted a rigorous and wide-ranging theoretical engagement with Marxian political economy, with contributions to the development of political ecology, struggles over resources and – more recently – how the politics of identity play out in the contemporary world. His first major study, *Silent Violence* (2013), addressed the effects of colonialism on the susceptibility of Northern Nigerians to food shortage and famine. Over the last decade Michael has continued to work in Nigeria, on the political ecology of oil and the effect of oil exploitation on Ogoni peoples. His other major books include *Curse of the Black Gold: 50 Years of Oil in the Niger Delta* (2010), *Violent Environments* (2001), *Global Political Ecology* (2011), *Globalising Food* (1997) and *Reworking Modernity* (1992).

**Emma Webb** is an MS candidate in the Department of Geography and Planning at Queen’s University, Canada. She is currently working on a project that contrasts the feasibility of hydroelectric and biofuel energy project implementation in southern Ontario. Emma has a BS in Environmental Science from McGill University, where she completed an Honours research project on the effects that peatland pools have on carbon sequestration.

**Max D. Woodworth** is Assistant Professor of Geography at Ohio State University, USA. Max is an urban and energy resource geographer with a research and teaching background in East Asian political economy, Chinese land policy and energy resource politics.
His research has focused to date on urban development in coal-mining regions of China’s northwest with an emphasis on the local politics of large-scale land development projects in resource boomtowns. Through examinations of urban transformations in resource peripheries, his work addresses the cultures and political economies of contemporary energy frontiers. Max is currently undertaking new research projects that examine emergent geographies of energy in China and comparative boomtown dynamics in Asia and the USA. His work has been published in journals such as *The Professional Geographer*, *Geoforum*, *Journal of Asian Studies* and *Inner Asia*.

**Karl S. Zimmerer** is Professor of Geography at Pennsylvania State University, USA. His research and teaching focus on several interconnected topics centered on global human-environmental change. These interests concern the interaction of cultural, socio-economic and environmental dynamics in agriculture and resource use of developing and developed countries. The first area of Karl’s interests is the role and conservation of agrobiodiversity in complex agricultural landscapes containing local and regional food and consumption systems. His second area of interest is the role of globalization in agriculture, rural livelihoods and biodiversity conservation. The third area concerns the concepts and theory in human-environment and nature-society approaches to environmental studies. He is widely published in geography and the environmental sciences, and was a recent editor of the *Annals of the American Association of Geographers*. His most recent book is *New Geographies of Energy* (2013).
