    pitfalls for leadership research
      lack of external validity 62–63
      low-impact manipulations of high-impact situations 64–65
      short-term approaches to long-term phenomena 65–66
      student samples, use of 64
    procedural confounds 58
    quality research 430–431
    quasi-experimental methods 55, 59, 60, 131, 266
    random assignment 49–50, 58, 59
    rationale for 48
    realism 63
    replication over multiple studies 57–58
    resource investment 50
    special purpose (SP) settings 60
    statistical analysis 49
    technology-enabled experiments 66–67
    used in leadership research 49–58
    validity 55, 58–59, 62–63
    video clips, use of 52
    vignette experiments 56–58, 61
    explicit measures 34
  see also implicit measures

SCHYNS_9781785367274_t.indd   445
10/11/2017   15:20

Birgit Schyns, Rosalie J. Hall and Pedro Neves - 9781785367281

Handbook of methods in leadership research

compared to implicit measures 13, 14
explicit–implicit dissociations 36–37
personality traits 38
prototypical or anti-prototypical attributes 32, 33, 36
responses to 17–18
self-concepts 39
exploratory factor analysis (EFA) 35
exponential random graph models (ERGMs) 284, 285

Facial Action Coding System (FACS) 111–113, 114, 118–119, 120
facial electromyography (EMG) 109–110
facial expressions of leaders 103–126
anger, displaying 106, 108
authentic 114, 119
automatic facial image analysis 109, 110
benefits of analyzing 103
communicative function 105–106
detailed coding techniques, requirement for 104, 109
dominance, displaying 108–109
and ecological theory 105
emotional contagion 107
extended example, in leadership studies 116–118
eyebrow movement 109, 116, 117
Facial Action Coding System (FACS) 111–113, 114, 118–119, 120
facial electromyography (EMG) 109–110
future recommendations 118–120
happiness, displaying 108
implications and contributions to leadership research 118–120
and implicit leadership theories (ILTs) 116, 117, 118
importance of sophisticated description in leadership research 113–114
intensity ranges 104, 110, 113, 117
interpretation of results 103
and leadership perception 103, 104, 116
leadership-related traits, investigating 108–109
manual facial expression coding 109, 110
measuring 109–114
micro-expressions 106, 119
and motivation to learn 108
movement of muscles 109, 112, 113, 116, 117
negative 108
neutral face 109, 112
political leaders 107, 114–115
positive 108, 113
quality research 432
short-lived displays 106
smiling 109, 110–111, 113, 114, 115, 117
sophisticated coding analysis, leadership studies using 114–118
sophisticated description of, and facial action coding system 111–113
subtle differences 103, 120–121
temporal aspects/timing 103, 111, 113
and traditional research on emotions 107–109
video recordings 108
factor analysis, leader perceptions 211–212
factorial design 50, 61
Fairhurst, M.T. 163
Fazio, R.H. 17–18
female leaders, and implicit measures 15, 24, 27
Ferreter, J.M. 305
Fichman, M. 343
field experiments 55–56, 421
fight or flight response 163
Fishbach, A. 69
fMRI (functional magnetic resonance imaging) see functional magnetic resonance imaging (fMRI)
Foti, R.J. 15
Fritz, C. 305
Frost, P.J. 50
functional magnetic resonance imaging (fMRI) 147, 148, 150, 151, 153, 158, 161, 163, 166
future developments 403–429
context dependence 403–404, 423
diary studies 309–312
experimental methods 66–68
facial expression coding 118–120
implicit measures 37–41
iteration 40–41
mediation 39–40
moderation 38–39
leadership theory 404–415
observational methods 97
person-oriented approaches 221–223
practice 422–423
quality research 437

Gable, S.L. 306
Gagné, P. 344
Galton, Sir Francis 127
Galunic, C. 267–268, 284
galvanic skin response (GSR) 149, 159, 166
gamification simulations 67
Gardner, W.L. 109, 154
Gates, Bill 377
gene–environment interplay, twin studies 129
General Social Survey 264
genome-wide association studies (GWAS) 138, 140–141
Ghisletta, P. 334, 343
Gibbons, D.E. 285
Gilkey, R. 158
Gillespie, J. 64
Gioia, D.A. 387
Glaser, B. 361, 387
Global Leadership and Organizational Behavior Effectiveness research program (GLOBE) 233, 235, 412
Glomb, T.M. 298–299
glycated hemoglobin 149
GMM (growth mixture modeling) 208, 209
Gong, Z.H. 107
Goodwin, V.L. 265, 368
Gooty, J. 240, 241, 245, 250, 311, 408–409
Granovetter, M.S. 260
Green, A.S. 308
grounded theory 352

group experiments 53–55
growth curve modeling (GCM) 317–346
applications 321–322
assessment of model fit and parameter estimates 341–342
conditional 335
consideration and limitations 343–344
covariance between individual intercept and slope values 327–328
covariants 320
data collection, planning 335–337
dependent variable, considerations for 323–324
factor model 330
fully latent curve model 333–334
general considerations for modeling change 319–321
independent time variable, considerations for 322–323
key characteristics 321–324
multi-level approach 324–328
Level 1 model 325–326, 328, 342
Level 2 model 326–328, 329, 342
overview 319–335
parameter estimation 324
piecewise latent growth model 333
planning the data collection 335–337
practical considerations 335–342
preliminary data steps 339–341
quality research 435–436
residual structures 334–335
structural equation modeling (SEM) framework 318, 321, 323, 328–334, 344
structuring of dataset for analysis 337–339
time-invariant covariates 338
time-varying covariates 338–339
growth mixture modeling (GMM) 208, 209

Hall, R.J. 117, 320
Hallinger, P. 173
Halpin, S.M. 320
Hamilton, A.L. 387
Hanges, P.J. 13, 240
Hannah, S.T. 158–159
Hansbrough, T. 407, 409, 412
Harms, P.D. 69
Harvey, P. 353
Hazy, J.K. 409
HCM (hierarchical cross-classified model) 245, 248, 249
Heck, R.H. 173
Hereditary Genius: An Inquiry into Its Laws and Consequences (Galton) 127
heritability (extent of genetic influence) 131, 132
hierarchical cross-classified model (HCM) 245, 248, 249
hierarchical linear modeling (HLM) 238, 245, 248, 321
Highhouse, S. 64
Hiller, N.J. 164, 165
HLM (hierarchical linear modeling) 238, 245, 248, 321
Hoffmann, E.L. 296
Hogan, R. 409
Holsti, O.R. 361–362
Hopton, C. 300, 307
Howell, J.M. 50
Hulin, C. 298–299
Hyman–Tate conceptual timing criterion 180
IATs (implicit association tests) 24–25, 29, 30, 31
Ilies, R. 156
implicit association tests (IATs) 24–25, 29, 30, 31
implicit content or processes, leadership theories 14–17
implicit self-concepts and leadership 16–19
leader categorization 13, 15
leader evaluation 16
leader motives 15–16
implicit leadership theories (ILTs) 353, 390, 404
as aggregation mechanisms 413–414
facial expressions of leaders 116, 117, 118
future developments 413–414
person-oriented approaches 210–211
implicit measures 13–47
see also explicit measures
accessibility-based 19, 20–23, 30
adapting across cultures 31
advantages for leadership research 17–19
association-based 19, 20, 23–25
classification based on conceptual purpose/properties 20
compared to explicit measures 13, 14
conditional reasoning test (CRT) 26, 30
criteria to guide appropriate use for leadership research 26–32
adaptable across cultures 31
category of measure to use 27–28
flexible adaptation to assess construct of interest 28–29
need for implicit measures 27
outcome of interest, predicting 29–30
reliability 30
resource availability 31–32
scores, interpreting 29
empirical example 32–37
and explicit processing 13, 14
explicit–implicit dissociations 36–37
failure of leadership research to adopt 14
future trends 37–41
incremental variance in criteria, predicting 18–19
interpretation-based 19, 25–26, 30
iteration 40–41
leadership schemas, assessing 32–37
leadership theories involving implicit content or processes see implicit content or processes, leadership theories
lexical decision tasks (LDTs) 19, 20, 21–22, 27, 32–37
mediation 39–40
meta-analyses 17
moderation 38–39
need for 27
organization 19
Index 449

overcompensation effect 38
pen-and-paper tasks 19–20
priming 23–24, 33
quality research 430
rare nature of in leadership research 13–14
reaction-time tasks 20, 30
resource availability 31–32
responses to 17–18
social desirability concerns 18, 38
and stereotypes 24
Stroop tasks 22–23, 27, 29, 30
taxonomy of/use in existing leadership research 19–26
temporal relationships between implicit processes, explicit processes and behavior 40
test-retest reliabilities 30
thematic apperception test (TAT) 25, 26, 28, 30
unconscious processes, determining 13, 14, 18
word- or sentence-completion tasks 13, 19, 20–21, 27, 29, 30

UCINET software
 block-modelling procedure (CONCOR), of UCINET 6 287, 288
 social network approaches 274, 277, 278, 287

Uhlmann, E.L. 19, 26–27
 unconscious processes, determining with implicit measures 13, 14, 18
 univariate biometric models, twin studies 128–133, 135, 136
 upper reachability, personal network measures 281, 295
 urine samples 148, 149, 164

Valeri, L. 191
 validity
 biographical methods 388
 coding systems 86–87
 conditional reasoning test (CRT) 26
 construct 367
 correlative 368
 experimental methods 55, 58–59, 62–63
 internal or external 87
 predictive 368
 qualitative content analysis 367–368
 sampling 367
 semantic 367
 sensor-based assessment methods 91–92
 Van der Vlist, R. 21
 Van Klief, G. 108

Van Knippenberg, B.M. 57
 Van Knippenberg, D. 51, 52, 57
 Vanderweele, T.J. 191
 variable-oriented approaches, vs
 person-oriented 196–202,
 220–221
 example 199–200
 goal of variable-oriented methods
 200–201
 method facet 199–202
 strengths of variable-oriented analysis 200
 terminology 197
 theory facet 197–199
 Venus, M. 52
 vertical dyad linkage (VDL) 233
 Victoria, Queen 379, 384, 393
 vignette experiments 56–58, 61
 Von Eye, A. 204, 205, 206, 220
 Vonk, R. 21
 Vuori, J. 287
