

# Figures

---

2.1	Estimated impact of total precipitation and average temperature during the growing season (April–September) on land use shares and beef cattle stocking rates	30
2.2	Impact of climate change for the 2020s and 2040s on farm gross margin and river quality	33
2.3	The impact of climate change adaptation and possible policy response	34
3.1	Frequency of adaptation options queried	49
3.2	‘Heat diagram’ showing significant odds ratios	53
4.1	Human well-being benefits from ecosystem services and institutional responses	62
5.1	Vulnerability scoping diagram (VSD) concept diagram	83
5.2	Final map of vulnerable populations (by census block group)	89
9.1	Adaptation to and mitigation of climate change and ocean acidification impacts on marine ecosystems and global fisheries can be implemented on various fronts using policy and action from all segments of society, that is, individuals, civil society, companies, NGOs and governments	157
10.1	California topography and major water storage and conveyance projects	170
12.1	Cost comparison of renewable to fossil-fuel electricity	198
12.2	Equality of renewable energy marginal costs (MC) and marginal cost of conservation	201
12.3	Renewable energy transition dynamics	207
13.1	Revenue equivalence of carbon tax and ETS with 100 percent permit auctioning	217
14.1	Actors and implementation phases of REDD+ in Ethiopia	242
15.1	The County Climate Change Fund approach piloted by NDMA	256
