

# Tables

---

1.1	Share of selected countries in CO <sub>2</sub> emissions and per capita CO <sub>2</sub> emissions (1990 and 2014)	2
1.2	Examples of different ecosystem- or engineering-based or hybrid (i.e. combination of ecosystem- and engineering-based) options to reduce the impact of four types of extreme weather events	8
1.3	Examples of the co-benefits of ecosystem-based adaptation measures in response to climate change	9
2.1	Water quality models	31
3.1	Description of independent variables queried in the survey instrument	48
3.2	Odds ratios derived from logit regression results	50
4.1	Climate resilience through nature governance: role of stakeholders, policies and measures: examples	71
5.1	Data and sources	86
7.1	Examples of potential CSA measures	117
8.1	An indication of the heterogeneity of marine ecosystems	134
11.1	Dhaka and Ho Chi Minh City at a glance	185
12.1	Capital cost of renewable and non-renewable electricity sources	199
13.1	Carbon tax impacts across revenue recycling scenarios: economic modeling results	216
13.2	Carbon pricing revenue usage in policy practice	224
16.1	Cost of the EU emissions reduction policy	267
16.2	Effects of the EU's mitigation policy on competitiveness (EU ETS versus business-as-usual scenario and EU ETS versus no-trade scenario)	269
16.3	Carbon leakage effect as a consequence of the EU's ETS	271
16.4	Distributional effect of the EU's emissions reduction policy	273
