
Acknowledgements

The two editors would like to thank each other for a valuable relationship spanning three decades. We have worked well together over the years having co-authored three books on ecotourism and co-editing another three on geotourism. The experience of co-editing this book has been extremely productive and very enjoyable. We wish to acknowledge the support of our employers: Edith Cowan University, one of Australia's leading new-generation universities; and Murdoch University, a university committed to research-led teaching and societal benefits. Both our universities are committed to excellence in research, teaching and community engagement.

No book is written in isolation, in fact most require the efforts of a wide range of people including the support of family and friends, the contributions and encouragement of colleagues, and of course the professional skills of those who are directly involved in its publication and subsequent promotion. This book is no exception and we wish to thank a number of people for their personal and/or professional support throughout the process.

First, we would like to thank all of the 54 contributors. Some we have known for many years and have worked with before, others were unknown to us before this project. Some are emerging, new, or young researchers, whereas others are leading academics having global impact in their fields. All we have got to know better through the many iterations of the text during the evolution of the book and we salute each and every one of you for having the faith in this project and the fortitude to deal with our many demands over a long period of time. This book is yours and we know that it has been immeasurably enriched by your contributions.

We also wish to acknowledge the enthusiasm and support of the publishers, Edward Elgar Publishing. They have won many awards for their publishing including The Independent Publishers Guild 2017 awards for the *Academic & Professional Publisher of the Year* as well as the prestigious overall *Independent Publisher of the Year*. They are to be commended for these awards. We came to know of them when they published the *International Handbook on Ecotourism*, to which we both contributed chapters. When we suggested to them that they should publish a similar title on Geotourism they were immediately enthusiastic and have been extremely professional throughout. Mrs Alex O'Connell, Senior Supervising Editor, commissioned the book and worked with us in its early days, and as publisher she is to be thanked for her acceptance of this project and for the many hours and months working with us on the book. She is very talented, dedicated and inspirational to work with. We also thank Sarah Brown for her work at the proofing and corrections stage.

Individually as editors we wish to thank a number of people.

Ross Dowling would like to thank a number of colleagues at Edith Cowan University who have encouraged me throughout my career, and provided ongoing professional support. First I wish to thank Professor Steve Chapman CBE, Vice Chancellor, who is inspiring us to be a more focussed research university and who has encouraged me in my work which I appreciate. To others at ECU, I wish to particularly thank Professor

Maryam Omari (Dean, School of Business & Law), A/Professor Maria Ryan (Associate Dean, School of Business & Law), as well as my colleagues Dr Dale Sanders, Dr Joanna Pearce, Dr Steve Fanning, Dr Greg Willson and Mr Peter Balsarini.

I also wish to thank my many Australian and international students from around the world particularly those from Asia, Africa and Scandinavia, who have participated in my Geotourism classes since 2008. We have had a lot of fun and I have learned a lot about the subject from your research assignments and oral presentations. Thanks also to other geotourism professionals Alan Briggs (Geoparks Western Australia), Angus M Robinson, Chair, and Dr Young Ng, Member (Geotourism Standing Committee, Geological Society of Australia), Professor Rannveig Ólafsdóttir (University of Iceland), Dr Martina Pásková (Ministry of Environment, Czech Republic), Professor Ibrahim Komoo (Malaysia), Nick Powe (Kents Cavern, UK) and Steve Martin (Former Deputy Director, National Parks Service, USA).

I also wish to thank my many colleagues around the world who are fostering UNESCO Global Geoparks. At the top of the list is Professor Patrick McKeever, Secretary of the International Geoscience and Geoparks Programme, Chief of Section, Earth Sciences and Geo-hazards Risk Reduction, Division of Ecological and Earth Sciences, UNESCO. He has worked with us since 2006 and over the past two decades he has been the prime mover of geoparks all over the globe. With his knowledge, enthusiasm, global network and leadership he has put geoparks on the agenda of virtually every nation and has been the champion of geoparks being key drivers of sustainable regional development. I also wish to thank Mr Guy Martini, Chair, UNESCO Global Geoparks Council who is in my mind 'the father of Geoparks'. He is an intellectual powerhouse who can combine theory with practicality when articulating the vision of geoparks.

Finally, I wish to thank my wife Wendy for her unfailing love and support through this my 17th book in the last 30 years. I could not have achieved this without her. I also wish to thank my children and grandchildren for the contributions they have made, and continue to make, to my life. They are my son Tobias and HyeHyang Dowling, and their son Joshua (Jeju Island, South Korea), daughter Aurora and Mike Gibbs and granddaughters Helena and Nina, as well as my son Frank Dowling and partner Kate Doak (Christchurch, New Zealand), daughter Jayne and her husband Trevor Belstead and granddaughters Shenee and Paige (London, England), son Simon and Lynette MacLennan and children Amelie, Ewan and Elsie (Melbourne, Australia) and son Mark and Jess Dowling and children Nessa and Zavier (Albany, Australia). This book is part of my legacy for you all.

David Newsome would like to thank those students who have developed an interest in Geotourism over the last five years. In this regard, special thanks go to Jessica Rutherford and my colleague Dr Halina Kobryn (Murdoch University) for their work on the Rottneet Island geotourism project. I would also like to thank Dr Young Ng (Sydney University) for several opportunities to visit China and learn about Chinese geoparks and develop an understanding of the tourism context in China. I would also like to acknowledge the efforts of my colleague Greg Simpson who, while undertaking a PhD at Murdoch, has proved to be an invaluable aid in assisting me in dealing with a complex array of research projects and along with excellent teaching support.

During my time at Murdoch University I worked closely with Professor Sue Moore, who unfortunately passed away in December 2016. I worked with Sue in both teaching and research at Murdoch University. Sue had an extraordinary intellect and was a very

successful academic. Sue published many papers and graduated many PhD students, but, most of all, I will miss her for her inclusiveness, collaboration and research effort that led to policy change in the field of protected area management.

I first became exposed to the wonders of geology and landscape when I was a boy in England. Family holidays to the astonishing coastal environments of Cornwall and Northeast England led to hours of exploring coastlines and rich memories. The family tradition of travel to natural environments continues on with my wife Jane, son Ben and daughter Rachel. The journey continues on as this world still has many interesting and inspiring places to visit. I trust that this book will help in adding new destinations to the wish list!
