Contributors

Megan Bailey received her PhD from the University of British Columbia (UBC) Fisheries Centre in 2012 where she sought solutions to global tuna governance through the lens of game theory and economics. She is an Assistant Professor and Canada Research Chair in Integrated Ocean and Coastal Governance with the Marine Affairs Program at Dalhousie University in Halifax, Canada. Megan’s work combines game theory with global value chain and informational governance to investigate how value chain and traceability information can help to transform seafood governance processes. This approach is interdisciplinary, and recognizes that collaboration of different stakeholders towards transparency and trust in global seafood value chains is necessary for cooperative and sustainable management.

Yannick Beaudoin is Chief Scientist at GRID-Arendal, a centre collaborating with the United Nations Environment Programme (UNEP) based in Norway. As Chief Scientist, he is fundamentally involved with overseeing and developing GRID-Arendal’s development strategy and work plan which is funded by the Ministry of Foreign Affairs Norway’s Oversee Development Assistance funding. This has helped provide unique insight into both Norway’s and the European Union’s aid mechanisms and strategies. In addition to overseeing and facilitating the various efforts of the organization, his recent project activities include the co-development of with UNEP of the global The Economics of Ecosystems and Biodiversity (TEEB) for Oceans and Coasts effort. Dr Beaudoin also works to apply new economic thinking, a science of change and participatory social processes to GRID-Arendal’s Green Economy and Green Economy in a Blue World activities that include working with countries, communities and industry to increase human well-being while preserving and enhancing ecological health and quality. He has also provided advisory services on green economy/blue economy to the East Asia Pacific group of the World Bank and to various UNEP Regional Seas Conventions.

Dyhia Belhabib is a postdoctoral Research Fellow, Sea Around Us, University of British Columbia and adviser to the Scientific Board of the Ministry of Fisheries, Algeria. Her work on documenting fisheries in data poor countries of West Africa has sparked major attention by the international community, and triggered policy and management actions that will change the course of fisheries in West Africa towards a better future. She works extensively with over 30 governmental, non-governmental and academia organizations, and leads efforts of catch reconstructions in the region and beyond resulting in over 40 comprehensive manuscripts documenting fisheries catches by all sectors and countries from West Africa, the Mediterranean, the Persian Gulf and Canada.

Jeroen van den Bergh is the Catalan Institution for Research and Advanced Studies (ICREA) Research Professor at the Institute of Environmental Science and Technology (ICTA) of Universitat Autònoma de Barcelona, Spain. Here he leads the research group on ‘Environmental and Climate Economics’. In addition, he is Honorary Professor of Environmental and Resource Economics at VU University Amsterdam (VUA).
Previously, he was Full Professor of Environmental Economics (1997–2007) at VUA. He is Editor-in-Chief of the journal *Environmental Innovation and Societal Transitions*. He was member of the Netherlands’ Energy Council. His research is on the intersection of economics, environmental science and innovation studies. He is editor of *Handbook of Environmental and Resource Economics* (1999, Edward Elgar). He was awarded the Royal/Shell Prize 2002 and the IEC Premi (Sant Jordi) de Medi Ambient 2011.

**Raphaël Billé**, Associate Researcher at the Institute for Sustainable Development and International Relations (IDDRI), joined the Pacific Community (SPC) in January 2014 to take on the position of RESCCUE Project Coordinator. Before that, for seven years he led the development and management of both Biodiversity and Climate Change Adaptation programmes at IDDRI. In this capacity he planned and supervised activities on a wide variety of topics ranging from high seas biodiversity governance to tropical deforestation, from climate adaptation policies to biodiversity economics and coastal zone management. Holding a PhD in environmental management (AgroParisTech) and two Master’s in urban and regional planning and environmental economics, Raphaël started his career as Scientific Attaché at the French Embassy in Pakistan, before joining the United Nations Development Programme (UNDP) in Indonesia as a Junior Professional Officer. Raphaël later established himself as an independent consultant and was contracted mainly by the International Union for Conservation of Nature (IUCN), bilateral cooperation agencies and international organizations.

**Francesco Bosello** graduated at Ca’ Foscari University of Venice, he received a Master’s degree in economics from the University College of London (UK) and a PhD in economics from Ca’ Foscari University of Venice. He is currently Senior Researcher at the Fondazione Eni Enrico Mattei (FEEM), Assistant Professor of Economics at the University Statale of Milan and affiliate scientist of the Euro-Mediterranean Centre on Climate Change (CMCC) where he is Director of the Economic Analysis of Climate Impacts and Policy Division (ECIP). His main interests are focused on climate-change policy and modelling, with particular emphasis on negotiation aspects of international environmental agreements and on optimal policy design considering adaptation and mitigation options.

**Patrick ten Brink** is Head of the Green Economy Programme and Director of the Brussels Office at the Institute for European Environmental Policy (IEEP). Patrick leads IEEP’s work on the values of nature, on the green economy, and on fiscal reform. He is on the Joint Group of Experts on the Scientific Aspects of Marine Environmental Protection (GESAMP) that advises the United Nations (UN). Patrick edited the book *The Economics of Ecosystems and Biodiversity (TEEB) in National and International Policy Making*. He has an MSc in environmental and natural resource economics from University College London and is on the editorial boards of the journals *European Policy and Governance*, *Business Strategy and the Environment*, and *Ecosystem Services*.

**José Hernández Brito** is Manager of the Oceanic Platform of the Canary Islands (PLOCAN). He has been Dean of the Faculty of Marine Science, Director of the Scientific and Technological Park and Research Vice-Rector of the University of Las Palmas de Gran Canaria, Spain. He has also served as Director of the Canary Institute of Marine Science and Director of Innovation of Technological Institute of the Canary...
Islands. He has been coordinator of several EU and Spanish funded research projects (for example, TROPOS). He is member of the TP-Ocean, Ocean Energy Europe and APP-Marina.

Valerie Burgener holds a Master of Science in biology from the University of Neuchâtel, Switzerland and an Advanced Certificate in Marine Biodiversity and Conservation from the Scripps Institution of Oceanography, San Diego, USA. Since 2007 Valerie has worked for the Worldwide Fund for Nature (WWF) in different marine and biodiversity policy related initiatives. Since 2012 she is a manager for WWF’s Global Marine Programme with a focus on supporting and facilitating the set-up of the Northern Mozambique Channel initiative.

Simon R. Bush is the Professor of the Environmental Policy Group at Wageningen University, the Netherlands. His research focuses on both public and private environmental governance arrangements for fisheries and aquaculture. His recent publications investigate the role of sustainability certification, fishery credit systems and entrepreneurial marine protected areas. He is currently the principle investigator for two major projects in the Western and Central Pacific and Indonesia looking at the relationship between government and business in the sustainable management of tuna fisheries.

Alberto Pacheco Capella is currently the regional focal point for biodiversity-related multilateral environmental agreements (MEAs) in Latin America and the Caribbean. He coordinated the UNEP Regional Seas Programme until May 2015. In that capacity he led a partnership on the green economy for oceans and the co-development, with GRID-Arendal, of a global TEEB for Oceans and Coasts. Similarly, he was responsible for the engagement of the Regional Seas Conventions and Action Plans in the World Ocean Assessment. In previous roles, he worked at UNEP Finance Initiative, managing the water and finance portfolio, and in the private sector as a banker in institutional and corporate banking. He is a LID alumnus from Harvard Kennedy School of Government and holds a Master’s degree in environmental science with a focus on environmental economics and environmental law and policy from Lund University in Sweden.

Nils Carlson is an investment banking analyst in the Mergers and Acquisitions group at Citigroup, Global Markets Incorporated. He acts as a financial adviser to firms that are looking to raise capital or increase operational efficiency in an inorganic matter. His analysis is a key driver of many different key metrics in a corporate takeover or merger. Nils received a BA in economics with a concentration in financial markets, summa cum laude, from Colby College. While studying at Colby, Nils elected to take multiple environmental economics classes, including one that hyper-focused on the choice experiment’s role in valuing key environmental attributes. In the future, Nils hopes to pursue an MBA and to continue his career in financial markets.

Stefano Cataudella is a Professor of Ecology at the University of Rome Tor Vergata, specializing in fisheries and aquaculture biology primarily in the Mediterranean and Eastern Atlantic. Since 2011 he has been Chairperson of the Food and Agriculture Organization (FAO) General Fisheries Commission for the Mediterranean (GFCM), coordinating the task force which guided the GFCM’s reform process. Throughout his long career, Mr Cataudella has dedicated himself to theoretical and applied research, publishing over
250 journal articles, technical papers and books. His professional accomplishments include consultancies with numerous international organizations (European Commission, EC; FAO; and UNDP), committee member roles for various Italian ministries (Ministry of Agricultural, Food and Forestry Policies, MIPAAF; Ministry of Education, Universities and Research, MIUR; and Ministry of the Environment, Land and Sea, MATTM), and as a liaison with fisherman and aquaculturist associations.

Lucien Chabason is Special Adviser at the Institute for Sustainable Development and International Relations (IDDRI). After being the Environmental Advisor to the French Prime Minister from 1974 to 1977, he worked as the Director of Mission, Rural and Urban Environment, at the Ministry of the Environment. He joined the United Nations Environment Programme in 1994 as coordinator for the Mediterranean Action Plan and Secretary for the Barcelona Convention. From 1993 to 2002, Lucien acted as consultant for Organisation for Economic Co-operation and Development (OECD) environmental evaluations of Portugal, Italy, the Netherlands, Sweden, Denmark, Ireland and Poland.

Wenting Chen holds an MSc in environmental and development economics from the University of Oslo and a PhD in natural resource economics from the Norwegian University of Science and Technology. During her PhD she spent a year doing research at the University of California Berkeley as a visiting scholar. She is now working in the Norwegian Institute for Water Research and has worked extensively on both marine resource and freshwater resource management. Her field includes integrated marine resource management, ocean acidification, socio-economic impact assessment, ecosystem services, impact evaluation, sustainable development of hydropower, and drinking-water values. She has experience on non-market valuation methods, multi-criteria decision analysis, bioeconomic modelling, climate change and risk modelling. She has coordinated or worked on projects in Europe, Asia and Africa.

William Cheung is an Associate Professor and Principal Investigator of the Changing Ocean Research Unit and Director (Science) of the Nereus Program at the University of British Columbia, Canada. His research programme focuses on understanding the vulnerability and responses of marine ecosystems and fisheries to global change, and exploring effectiveness and trade-offs of mitigation and adaptation options. He participated in various high-level international environmental assessments, including being lead author in the Fifth Assessment Report of the Intergovernmental Panel on Climate Change, Intergovernmental Platform on Biodiversity and Ecosystem Services and Global Biodiversity Outlook.

Osiel González Dávila is Research Associate at the International Centre for Research on the Environment and the Economy. His principal research interests lie in the fields of economics, environment and development. He holds an MSc in economics from the University of Essex, an MRes in environment and development from the University of Lancaster and earned his PhD in economics at SOAS, University of London. Previously he has held positions as Guest Teacher at the London School of Economics and Political Science and as Lecturer in Economics at SOAS.

Elisa Delpiazzo holds a laurea cum laude in international and diplomatic science – major in international economics and finance – from the University of Genova (2004) and a
Laurea Specialistica cum laude in economics, politics and international institutions from the University of Pavia (2006). She holds a PhD in economic politics – major in quantitative methods for political analysis – from the Catholic University of Milan (2011). She has been involved in many research projects both internationally and nationally. Before joining CMCC, she collaborated with the Italian Ministry of Foreign Affairs and Regione Liguria. She has been collaborating with the CMCC and FEEM since September 2013. Her research areas include computable general equilibrium (CGE) modelling, fiscal sustainability of mitigation and adaptation policies, and public finance for green growth.

Sahan T.M. Dissanayake is an Assistant Professor of Economics at Colby College, a Visiting Scholar at the University of Minnesota and an Assistant Professor (by courtesy) of Economics at Portland State University, USA. His research centres on ecosystem services and conservation and uses choice experiment surveys and mathematical programming methods. He has done survey work on grasslands in Illinois, the tree shade programme in Oregon, seafood eco-labelling in New England, coral reefs in Okinawa, REDD+ programmes in Nepal and Ethiopia, and mathematical programming work on species conservation and renewable energy adoption in military installations. Sahan received a PhD in agricultural and applied economics and an MSc in applied mathematics from the University of Illinois and a BA in computer science and economics from Ohio Wesleyan University.

Petra Drankier has been working at the Netherlands Institute for the Law of the Sea (NILOS), Utrecht University, from early 2009 to mid-2012. Previously she was a policy adviser for the Dutch regional government Province of Zeeland. Her research on public international law included projects on international boundary disputes, the regime of areas beyond national jurisdiction, marine protected areas, marine bioprospecting, marine spatial planning in the EU, integrated management and impact assessment in the marine Arctic. In early 2013 she started working for a Dutch agricultural university as policy adviser on international strategy and project manager for international education and research partnerships.

Ian Drysdale has been the Honduras Coordinator of the Healthy Reefs for Healthy People Initiative since 2010. He is in charge of data collection, Atlantic and Gulf Rapid Reef Assessment (AGRRA) training, as well as the development of partner relations and other outreach and media efforts in Honduras. Ian has an undergraduate degree in environmental engineering and is currently writing his thesis for a sustainable development Master’s degree. Over the years he has worked on different projects with The Nature Conservancy (TNC), World Wildlife Fund (WWF), Conservation International (CI), Coral Reef Alliance (CORAL), United States Agency for International Development (USAID) and CARE. He resides on the island of Roatan, Honduras with his wife, Jenny Myton, and has been working on reef protection and management since 2002.

Sam Dupont is a Researcher and an Associate Professor in Marine Ecophysiology at the University of Gothenburg, Sweden and an Honorary Assistant Professor at the School of Biological Sciences, Hong Kong University. He is currently based at the University of California Berkeley for a sabbatical stay. His main research topic is on the effect of global changes on marine species and ecosystems. He was published in more than 120
publications in journals including *Nature*, *Proceedings of the National Academy of Sciences* (PNAS) and *Trends in Ecology & Evolution* (TREE). His work aims at revealing the mechanisms behind species and ecosystem responses to environmental changes and at developing the needed unifying theory for large-scale projections.

**Fabio Eboli** holds a PhD in economics of the public sector from University of Salerno, a MSc degree in environmental economics from University of York and a BSc degree in economics from the University of Salerno. He joined FEEM in 2007. He also belongs to the Economic Analysis of Climate Impacts and Policy Division at the Euro-Mediterranean Centre on Climate Change. His main research field is economic analysis of climate change impacts and policies through computable general equilibrium modelling. He is the team leader of the FEEM Economic Assessment and Scenarios for Sustainable Development Goals project. He has been appointed as a thematic coordinator of the European Climate Change Adaptation platform (Climate-Adapt).

**Géraldine Fauville** has a background in marine biology and in education sciences. Based at the University of Gothenburg, Sweden, she has been managing marine education projects in collaboration with Stanford University for the past eight years and is currently a doctoral student in pedagogy studying the implication of digital learning resources for students’ ocean literacy. Géraldine is a founding member of the European Marine Science Educators Association aiming to empower (in)formal educators to teach about the ocean. She is a main actor in the development of Ocean Literacy in Europe and is currently a visiting research scholar at University of California Berkeley.

**Nicola Ferri** holds a PhD in international law and currently serves as Legal and Institutional Officer of the FAO GFCM. Before joining the FAO, Dr Ferri worked for several years as a legal consultant for the Italian Ministry of Foreign Affairs. In this capacity, he represented Italy in numerous fora, including at United Nations (UN) General Assembly meetings relating to oceans and fisheries. He has also dealt with several other legal issues in the context of the work of the Sixth Committee of the UN’s General Assembly in New York. Dr Ferri has authored several publications on various international law topics, including a monograph entitled *Conflicts over the Conservation of Marine Living Resources: Third States, Governance, Fragmentation and Other Recurring Issues in International Law* (2015, G. Giappichelli Editore).

**Davide Fezzardi** is a fishery biologist specializing in aquaculture and coastal zone management currently working as an aquaculture specialist with the General Fisheries Commission for the Mediterranean (GFCM). He progressed from technical work and research in Italy to implementing projects to support livelihoods through aquaculture in Southeast Asia where he worked for over 13 years. Among other things, he has dealt with small-scale fish and shrimp aquaculture, participatory approaches for aquaculture planning, micro-credit for coastal fisheries communities, coastal lagoons management, community participation and co-management. His career spans research and training institutes as well as bilateral donors and multilateral financial institutions. Areas of interest include aquaculture development and sustainability, resources management, aquaculture certification and project management. He is the author and co-author of several articles published in international magazines.
Marisol Rueda Flores is the Mexico Coordinator and Social Media Manager for the Healthy Reefs Initiative, based in Playa del Carmen, Mexico. She earned her degree in biology from Morelos State University in 2004 and later completed her Master’s in science on marine resource management in 2007 at CICIMAR-IPN (La Paz, Baja California Sur, Mexico). She studied blue whales and collaborated as research assistant in different projects from population structure, fatty acids and isotopic change of several cetaceans as well as the geochemistry in the Gulf of California. She has participated in diverse environmental education programmes focusing in the ecology and biology of marine invertebrates and their substrates, cetaceans, sea turtles, tortoises and vegetation in different countries like Mexico, Costa Rica and the Galapagos Islands, Ecuador. Her drive is sharing information with other people with effective communication and she has been a passionate scuba diver since 1999.

Gustavo A.B. da Fonseca is the Director of Programs at the Global Environment Facility. Before that, Dr Fonseca was the Chief Conservation and Science Officer of Conservation International, and Professor of Ecology at the Federal University of Minas Gerais, Brazil. He holds a Master’s degree and a PhD from the University of Florida and has published close to 150 publications, articles and books. He received the Oliver Austin Award of the University of Florida’s State Museum for outstanding research in the natural sciences, and the Golden Ark Award, an official order of the Dutch government, the highest conservation award of the Netherlands, among others. He has served on the boards of many environmental organizations and has lectured in over 30 countries.

Yoko Fujita is a Professor and the Director of International Institute for Okinawan Studies in University of the Ryukyus, Okinawa, Japan. Her major academic field is environmental economics. In particular, she is studying tradeable emission schemes in the United States and economic valuation of natural environments in Okinawa and Palau. She is also currently leading two research projects on island studies, ‘Toward New Island Studies as an Academic Node between Japan and East-Asia/Oceania’, and ‘Constructing Theoretical and Practice Models for an Autonomous Island-Society in Contemporary Global Society’. These are focused on Okinawa, Palau, Hawaii and other small islands in the East Asia and the Pacific. Professor Fujita has published eight books and book chapters, and numerous articles on the above topics.

Bella Galil is a senior scientist with the Steinhardt Museum of Natural History, Tel Aviv University, Israel, and has chaired the Zoological Society of Israel and headed the scientific committee of the National Parks and Nature Reserves Authority, Israel. Dr Galil has written over 280 articles published in peer-reviewed literature and has been responsible for major research and monitoring contracts in the Mediterranean Sea.

Maialen Garmendia has a PhD in environmental sciences, particularly in the assessment of the environmental impacts that human activities produce on marine ecosystems. She is interested in policy-orientated environmental research in order to improve oceans governance and ensure their sustainable use. She has worked at AZTI-Tecnalia, the Autonomous University of Barcelona and the Basque Centre for Climate Change within different national and European projects regarding natural and socio-economic research on marine ecosystems. She has established collaborations worldwide and her work has succeeded in several publications in international journals.
Andrea Ghermandi obtained a PhD in analysis and governance of sustainable development from the School for Advanced Studies in Venice Foundation in Italy. He is an Assistant Professor and Head of the Global Green MBA programme at the University of Haifa’s Faculty of Management in Israel, and a member of the Global Young Academy. He contributed to international initiatives such as The Economics of Ecosystems and Biodiversity (TEEB), the Ocean Health Index, the Ecosystem Service Partnership, UNEP’s Project for Ecosystem Services (ProEcoServ) and several European research projects. He has published more than 25 original research articles in peer-reviewed international journals. His research focuses on the interdisciplinary, technical and economic evaluation of environmental technologies and the spatially explicit valuation of ecosystem services.

Eva Giacomello has a PhD in evolutionary biology from the University of Padua, Italy. She is a biologist whose research interests cover a range of issues, including fish ecology and biology, seamount management and conservation, and marine ecosystem services. She started her scientific career working on reproduction of fishes at the University of Padua. She then moved to the University of the Azores in Portugal, widening her interest to issues more related to deep-sea resource management and conservation. She co-ordinated the Condor observatory project on seamount research and management and she was guest editor of a special volume on the Condor seamount. Currently she is a post-doctoral researcher at the IMAR-Instituto do Mar and the Marine and Environmental Sciences Centre (MARE) of the University of the Azores, working on the ecology of seamount fishes.

Amerissa Giannouli is a PhD candidate at the Athens University of Economics and Business (AUEB). She has BA in economics (specializing in business economics and finance) and an MSc in international and European economic studies (specializing in European economic policy) from the AUEB. Her research interests include environmental and agricultural economics, public economics and economic competitiveness. She is also Researcher at the International Centre for Research on the Environment and the Economy (ICRE8) and she has participated in research projects funded by the EU.

Giulia Gitti is an Associate of the Institute for European Environmental Policy (IEEP) focusing on market-based instruments for marine litter. She graduated from the Alma Mater Studiorum – University of Bologna, branch of Forlì. The final dissertation of her Master’s was on the subject of marine litter. In particular, her analysis focused on the annual campaign promoted by Legambiente in Italy.

John Gowdy is Professor of Economics and Professor of Science and Technology Studies, Department of Economics, Rensselaer Polytechnic Institute in Troy, New York. He is the recipient of the Herman Daly Award for contributions to ecological economics. He is past President of the International Society for Ecological Economics. His current research interests include climate change, biodiversity valuation, behavioural economics and evolutionary economics.

Rolf A. Groeneveld is Associate Professor at the Environmental Economics and Natural Resources Group at Wageningen University. He received his PhD in 2004 from Wageningen University with a dissertation on biodiversity conservation in the Netherlands.
research he develops interdisciplinary approaches to analyse management problems in coastal and marine ecosystems, with applications in the Netherlands, Southeast Asia, and the Pacific Ocean. His recent publications focus on invasive species management, risks of catastrophic events, and fisheries management under uncertainty.

**Mish Hamid** is a project management specialist working for the United Nations Development Programme. He has performed many roles and fulfilled many responsibilities for the Global Environment Facility's IW:LEARN project, ranging from project management and development, to partnership building, training services, and the development of information management solutions for GEF IW projects. He has assisted or led the management of more than three phases of the project, helping to manage its million-dollar budgets and partner agreements with multilateral agencies, governments, non-governmental organizations (NGOs) and the private sector.

**Steffen Hansen** is an environmental specialist at the Global Environmental Facility (GEF). He authored reports on blue biomass innovation options published and brought to scale in Denmark, while co-authoring GEF reports on select marine issues. He gave talks at the first informal meeting of the parties to the UN Watercourse Convention, expert panels at the 2015 World Water Forum and addressed government and research stakeholders worldwide interested in Blue Biomass innovation.

**Lina Hansson** holds a Master of Science in biotechnology engineering from Lund University, Sweden. She was the Project Manager of the European Project on Ocean Acidification (EPOCA) from 2008 to 2012. She is currently working as Associate Project Officer of the Ocean Acidification International Coordination Centre (OA-ICC), launched in 2012 and based at the International Atomic Energy Agency (IAEA) Environment Laboratories in Monaco. She is co-editor of the ‘Guide to best practices in ocean acidification research and data reporting’, a guidance document for the ocean acidification research community, and the first book on the subject, *Ocean Acidification*, published in 2011 by Oxford University Press.

**Leah Karrer** is an international marine conservationist currently serving as a Senior Environmental Specialist with the Global Environment Facility where she is primarily engaged in marine, coastal and freshwater initiatives. Previously Dr Karrer directed the multi-million dollar Marine Management Area Science Program at Conservation International, which spearheaded science-to-action globally. Following her doctoral studies at Duke University, she directed the Global Socioeconomic Monitoring Program through a partnership among the US National Oceanic Administration, the International Union for Nature and the Global Coral Reef Monitoring Network. She earned the Bronze Mead Service award from Department of Commerce and the Head in the Sky Award from Conservation International, published numerous articles and lectured at conferences and workshops worldwide.

**Marianne Kettunen** is a Principal Policy Analyst at the Institute for European Environmental Policy (IEEP), co-leading the institute’s work on global challenges and solutions. Marianne has over ten years of expertise in issues related to the EU and international biodiversity policy with special focus on the socio-economic importance of biodiversity and ecosystem services. She also has a long track record in policy influence and capacity
building on the value of nature, ecosystem services and green economy, including being the lead editor of a practical guidance book on the socio-economic value of protected areas published in 2013 (Taylor & Francis/EarthScan).

Erasmia Kotroni is an MSc holder in applied economics and finance from Athens University of Economics and Business (AUEB) and a BSc holder in international and European economics from Athens University of Economics and Business (AUEB). She is now working as an affiliated researcher at the International Centre for Research on the Environment and the Economy (ICRE8 Research Centre). She is a member of the Economic Chamber of Greece. Her main research interests are environmental economics, industrial organization and microeconomics.

Phoebe Koundouri holds a PhD, MPhil and MSc from the University of Cambridge, UK. She is Professor of Economic Theory and Econometrics at the Athens University of Economics and Business, Greece and the Grantham Institute of the London School of Economics and Politics, UK. She is also the Founder and Scientific Director of ICRE8 Research Centre, Greece. Additionally, she is elected Vice President of the European Association of Environmental and Resource Economists, co-editor of the association’s official journal, and member of the editorial team of more than 20 top rank economics and multidisciplinary journals.

Vicky Lam is a fisheries economist and dedicates herself to a broad range of fisheries related researches. One of Vicky’s research interests is to focus on understanding the effect of climate change on the economics of major commercial marine fisheries at both the global and regional scales. She has studied the extent of economics impact of climate change on global fisheries in terms of change in economic variables; and the socio-economic implication of the impacts of projected climate change and ocean acidification on marine resources in some regions, which are highly vulnerable to the change in climate, such as the Arctic region and West Africa.

Henrik Lindhjem (PhD in environmental economics) is a senior environmental and natural resource economist jointly affiliated with Vista Analysis and the Norwegian Institute for Nature Research in Oslo, Norway. He has worked particularly on non-market (economic) valuation methods applied to ecosystem services from marine and freshwater environments, forests, and urban and peri-urban areas. Central to his work is deriving and using economic valuation results in cost–benefit analysis and for the design of economic instruments (such as payment for ecosystem services or tax incentives) for improved ecosystem service management. He was the Managing Editor of the journal of the Norwegian Association of Economists from 2011 to 2013 and publishes regularly in international journals.

Maria Loureiro is Associate Professor in the Department of Economic Theory in the University of Santiago de Compostela, Spain, her research area being environmental economics. Recently, she has conducted a large environmental damage assessment study used in court estimating the total economic loss caused by the Prestige oil spill in Spain. She is principal investigator of several projects and has published more than 70 refereed articles in international journals.

Kristin Magnussen (PhD in environmental economics) is partner and senior research economist in Vista Analysis. She has extensive experience in the theoretical and practical...
use of resource and environmental economics and management for 30 years. Her main research topic is valuation of environmental goods and bads, and implementing results of such studies in cost–benefit analysis (CBA) and practical management. For the last seven to eight years much of her work has been related to assessment and valuation of ecosystem services, particularly from marine ecosystems, but also from freshwater, forests and urban areas. She was appointed by the government to the Norwegian Commission on Assessment and Valuation of Ecosystem Services, which published the Norwegian Official Report NOU 2013:10, ‘Goods from nature – on the benefits from ecosystem services’.

**Evdokia Mailli** is a Research Associate at the Management of Data, Information, and Knowledge Group (MaDgik) of the Department of Informatics at the University of Athens and at ICRE8 (International Centre for Research on the Environment and the Economy). She holds a BSc in mathematics from the University of Patras and an MSc in computer science from the Faculty of Informatics and Telecommunications of the University of Athens. Her current interests involve data analysis, data visualization and web-based decision support tools.

**Anil Markandya** has a PhD from the London School of Economics and has taught at University College London and Bath University in the UK and at Harvard University in the USA. He was a lead author for chapters of the third, fourth and fifth Intergovernmental Panel on Climate Change (IPCC) Assessment Reports on Climate Change and has worked extensively on natural resource valuation. In 2008 he was nominated by Cambridge University as one of the top 50 contributors to thinking on sustainability in the world. Currently he is the Scientific Director and Distinguished Ikerbasque Professor at the Basque Centre for Climate Change in Spain and he was the President of the European Association of Environmental and Resource Economics (2014–15).

**Fernando Marques** holds a Licenciate (pre-Bologna) in naval military sciences and a Specialization and a Master's in informatics. He is Head of Programming Services Department at the Portuguese Directorate-General for Maritime Policy, manages the Mar-Portugal Plan, the European Economic Area (EEA) Grants PT02 Programme, the NIPIM@R project and the Portuguese participation in the Common Information Sharing Environment (CISE) initiatives. He is member of the European Experts Group on Integrated Maritime Surveillance and of the Copernicus Committee. He is a Researcher at the Navy Research Centre and an Invited Lecturer at the NOVA Information Management School. He held various positions in the Navy Information and Communication Technologies Directorate and aboard several Navy vessels; namely, he was the commanding officer of NRP *Bacamarte*.

**Jim Marsden** holds a Master's in organizational management and leads organizational and social projects, experiential learning and training in areas of leadership development, social innovation, and the human experience of transformation and change. His work has been in many contexts including corporations, education systems, health care, government agencies and start-up businesses. Jim is also a wilderness guide, and leads programmes in nature that support individual development and awareness. He is a member of the Presencing Institute’s Global Practitioner Circle and is a principal at Reboot.io where he leads learning and development.
**Fabio Massa** is the Senior Aquaculture Officer at the General Fisheries Commission for the Mediterranean (GFCM) of the FAO. He has expertise in marine aquaculture and fisheries lagoon management, and has more than 35 years of extensive experience on scientific cooperation and project management. He coordinated national and international capture fisheries and aquaculture projects in the Mediterranean and in several oceanic region. For the FAO he has served as responsible fishery officer of the Aquaculture Training Centre of the Regional Project MEDRAP and the Coordinator of the Regional Projects AdriaMed and MedSudMed, where he had the overall responsibility for planning, implementing and leading technical operations, including the supervision and technical support of research and cooperation activities in several areas and countries in the Mediterranean. He also taught in numerous training courses and seminars on aquaculture and capture fisheries, and he is the author and co-author of many scientific and working documents on capture fisheries and aquaculture.

**Melanie McField** is the co-founder and Director of the Healthy Reefs for Healthy People Initiative (HRI), a multi-institutional effort to track the health of the reef ecosystem and our management progress in ensuring its long-term integrity. Melanie lived and worked in Belize for over 20 years; first as a Peace Corps volunteer and field biologist and then with World Wildlife Fund, and since 2006 with the Smithsonian Institution. She has a PhD from the University of South Florida, with over 35 publications focused on coral reef community ecology, coral bleaching, chemical contamination and management effectiveness evaluations. She is an effective communicator and has been featured on television appearances including the *TODAY* show, MSNBC, National Geographic, Animal Planet and the BBC.

**Gui Menezes** has a PhD in marine ecology from the University of the Azores. Since 1993 he has been a researcher of the University of the Azores and he is currently a member of the Marine and Environmental Sciences Centre (MARE). His research areas include deep-sea ecology, seamounts ecology, demersal and deep-water fish biology, ecology and fisheries. He has authored or co-authored more than 50 peer-reviewed papers in international scientific journals, six book chapters and worked as a co-editor of two special volumes in international journals. He has participated – as coordinator or team member – in more than 30 scientific projects financed by regional, national or international funds including the coordination of the Condor observatory project. He has a long experience on research surveys mainly targeting demersal and deep-water fish species in the Atlantic Ocean.

**Marc Metian** is Researcher at the Environment Laboratories of the International Atomic Energy Agency, Monaco. He is a radio-ecologist, holds a degree in bioengineering from the Free University of Brussels, Belgium (2003) and a PhD in biological oceanology and marine environment from the University of La Rochelle, France (2007). His doctoral researches focused on the bioaccumulation of radiotracers in marine invertebrates and risk assessment of contamination to human consumers. During several postdoctoral fellowships, he further specialized in aquaculture nutrition and conducted collaborative studies on sustainable aquaculture and food security and safety with University of Hawaii and Stockholm Resilience Centre.

**Dana Miller** is a postdoctoral researcher working with both the Fisheries Economics Research Unit and Sea Around Us at the University of British Columbia’s Institute for
the Oceans and Fisheries (formerly the Fisheries Centre). Her research currently focuses broadly on the topic of international fisheries and oceans governance. More specifically, she is involved with projects that are addressing the problem of illegal fishing from a global perspective, aiming to identify opportunities where incentives relating to this activity can be reduced or removed. Dana completed her PhD at University College Dublin, where she investigated various issues associated to the sustainability of the seafood industry in Ireland, including industry transparency and product mislabelling. Dana also obtained an MSc in conservation and biodiversity from Trinity College Dublin and a BSc in marine biology from the University of British Columbia.

**Ben Milligan** is a Senior Research Associate at the Institute for Sustainable Resources, University College London (UCL) and Visiting Senior Fellow at the Australian National Centre for Ocean Resources and Security. Previously he has held visiting positions at the University of Cape Town, British Institute of International and Comparative Law, National University of Singapore, International Union for Conservation of Nature (IUCN), George Washington University and University of Cambridge. Dr Milligan's research and consulting focus on governance of environmental assets including oceans and coasts, and on the design of legal and policy frameworks for sustainable development. He is the lead author of the 2014 Global Legislators Organisation Study on Natural Capital Accounting.

**Katja Mintenbeck** is a graduate in marine biology and received her PhD from the University of Bremen, Germany in 2008. Since 2000 she has participated in several projects on ecology and composition of benthos and fish communities in the North Sea and Southern Ocean at the Alfred Wegener Institute for Polar and Marine Research in Bremerhaven. Her main focus was on the impact of natural and anthropogenic disturbances (for example, iceberg scouring, offshore wind farms, trawling and environmental changes) on marine living communities, particularly on fish. From 2014 to 2015 she worked at the University of Bremen on the EU project TROPOS.

**Essam Yassin Mohammed** is a Senior Researcher in Environmental Economics at the International Institute for Environment and Development (IIED) and former Head of Fisheries Promotion Unit at the Ministry of Fisheries of Eritrea. In addition to his academic and professional experience as a fisheries scientist, he is an expert in economic valuation of the environment. In his capacity as environmental economist, he works on a wide range of topics from economic valuation of environmental goods and services to influencing policy processes to promote fair, inclusive and sustainable economies, both at national and global levels. Dr Essam also leads IIED’s growing work programme on Economics of Marine and Coastal Fisheries. He is editor of the book *Economic Incentives for Marine and Coastal Conservation: Prospects, Challenges and Policy Implications*.

**Erik J. Molenaar** is Deputy Director of the Netherlands Institute for the Law of the Sea (NILOS) at Utrecht University and Professor with the K.G. Jebsen Centre for the Law of the Sea (JCLOS) at the University of Tromso, Norway. After completing his PhD on ‘Coastal state jurisdiction over vessel-source pollution’ in 1998, he broadened his research field with international fisheries law and the international law relating to the Antarctic and Arctic. His research has led to his participation in various diplomatic conferences and other intergovernmental meetings, including the meetings of several regional fisheries
management organizations. Since late 2013 his research has had a specific focus on participation, allocation and the ecosystem approach to polar fisheries.

**Remi Mongruel** holds a PhD in environment and development economics. He is currently a researcher at IFREMER, the French Research Institute for the Exploration of the Sea, and Associate Professor at the University of Brest. He works as an expert for the French Environment Ministry, on both the economic assessments in support of the EU Marine Strategy Framework Directive implementation and the marine working group of the French Assessment of Ecosystems and Ecosystem Services (EFES).

**Konar Mutafoglu** is a Senior Policy Analyst at the Institute for European Environmental Policy (IEEP). He is an applied economist with a focus on environment and behaviour. He has worked extensively on natural resources management, climate change, economic instruments for environmental policy and sustainable development. His expertise also covers behavioural aspects of policy analysis and policy-making, including the application of behavioural science to policy areas such as sustainable consumption and wellbeing. At IEEP he leads and contributes to national, European and international projects. Previously, he worked as a researcher at the University of Queensland and served as an adviser to the German Development Cooperation.

**Ståle Navrud** (PhD) is Professor in Environmental and Resource Economics at the School of Economics and Business at the Norwegian University of Life Sciences (NMBU). He has extensive experience in environmental valuation and cost–benefit analysis in Europe, Africa and Asia, and has published more than 100 journal articles and book chapters on economic valuation of ecosystem services (marine, terrestrial and aquatic), environmental quality, cultural heritage and environmentally related public health impacts. He also co-edited three books on environmental valuation in Europe, environmental value transfer and valuation of cultural heritage, respectively. He was Review Editor (WG 2) of the Fifth Assessment Report (Climate Change 2014) of the Intergovernmental Panel on Climate Change (IPCC), and is currently Expert Reviewer for the UN Intergovernmental Platform on Biodiversity and Ecosystem Services (IPBES).

**Paulo A.L.D. Nunes** is the Global Coordinator and Manager of UNEP’s flagship project on mainstreaming ecosystem services for macroeconomic policy. Dr Nunes has contributed technical expertise to a wide set of international initiatives, including WAVES – Wealth Accounting and the Valuation of Ecosystem Services; Experimental Ecosystem Accounting and Applications and Extensions of the SEEA – System of Environmental-Economic Accounts; Guidance Manual on Valuation and Accounting of Ecosystem Services for Small Island Developing States; TEEB – The Economics of Ecosystems and Biodiversity; OHI – Ocean Health Index; and the Global Partnership for the Oceans, World Bank. His research interests include environmental policy and sustainable development, marine economics and governance.

**David O. Obura** is a Director of Coastal Oceans Research and Development in the Indian Ocean (CORDIO) East Africa, based in Kenya. He holds a PhD in marine biology from the Rosenstiel School of Marine and Atmospheric Science, Miami. His research focuses on coral reef resilience to climate change and the biogeography of Indian Ocean corals, which has led to a policy focus promoting regional approaches to
ocean governance and marine ecosystem protection. He has served on the Blue Ribbon
Panel of the Global Partnership for Oceans, is a member of the International Union for
Conservation of Nature (IUCN) Species Survival Commission and is on the Group on
Earth Observations – Biodiversity Observation Network’s (GEOBON’s) Working Group
5 on Oceans, Global Ocean Observing System’s (GOOS’s) Biodiversity and Ecosystems
Panel, and the Steering Committee of bioDISCOVERY.

**Elena Ojea** is a Research Fellow at the Basque Centre for Climate Change (BC3) in Spain,
working on the economics of climate change and ecosystem services. She has participated
in many international projects and established collaborations worldwide, including one
year at the University of California, Santa Barbara, USA. Her work led to publications
using multidisciplinary approaches to climate change adaptation, including the econom-
ics of ecosystem services and biodiversity, ecosystem-based adaptation (and mitigation)
and the resilience of socio-ecological systems.

**Nami Okubo** is an Associate Professor of Tokyo Keizai University. Her area of specializa-
tion is coral biology and marine conservation.

**Makoto Omori** is Emeritus Professor of the Tokyo University of Fisheries. His area of
specialization is biological oceanography and ecology of coral reefs. He is author of 12

**Laura Onofri** holds a Master of Science in economics (Catholic University of Leuven)
and a PhD in economics (Maastricht University). She currently is with the University of
Padua. Previously she has worked as a Senior Economist at the Catholic University of
Leuven, University of Bologna, University of Venice Cà Foscari and at the Fondazione
Eni Enrico Mattei (FEEM). She has been teaching industrial economics and micro-
economics, both graduate and undergraduate, as Adjunct Professor, at the Economics
Departments of the Bologna and Venice Cà Foscari universities. She regularly con-
sults for international organizations, including the Energy Charter, Conservation
International, UN Environmental Programme, UN World Trade Organization, UN Food
and Agriculture Organization, and the World Bank. Onofri has authored/co-authored
around 80 scientific publications mostly aiming at empirically analysing the interaction
between markets, natural resources management and sustainable development.

**Ayumi Onuma** is a Professor at the Faculty of Economics, Keio University, Japan. His
specialized field is environmental economics. His recent studies include ‘An economic
and ecological consideration of commercial coral transplantation to restore the marine
ecosystem in Okinawa, Japan’ in *Ecosystem Services*, vol. 11, 2015 (co-authored with
Nami Okubo).

**David Osborn** is Director, Environment Laboratories, at the International Atomic Energy
Agency. He holds a degree in environmental science and a master of environmental law
from the Australian National University in Canberra. He has served as a director with
the Australian Government’s Department of the Environment, the Great Barrier Reef
Marine Park Authority, and as adviser to the Federal Minister for the Environment in
Australia. With the United Nations Environment Programme he served as Coordinator
of the Global Programme of Action for the Protection of the Marine Environment from
Land-based Activities, and the Ecosystem Management Programme.
xxiv  Handbook on the economics and management of sustainable oceans

Allan Padilla is a researcher at the Fisheries Law Centre, Harvard. He is designing a project that addresses the lack of capacity for illegal fishing post-arrest follow up in West Africa. He has recently contributed to the assessment of the illegal unreported and unregulated large pelagic catches (that is, tuna, tuna-like species and sharks) in the Indian and Atlantic Oceans and in the Mediterranean Sea for the Sea Around Us. Allan is also in the process of developing a prediction model of salmon migration with climate change in British Columbia, based on his recent publication in the Hydrological Sciences Journal on the impacts of variability and trends in runoff and water temperature on salmon migration in the Fraser River Basin.

Chrysoula Papagianni has an MSc in international and European economic studies (specializing in European economic policy) and BSc in finance and accounting. She is currently a researcher at the International Centre for Research on the Environment and the Economy (ICRE8) and has participated in research projects funded by the EU. Her main research interests are economic valuation of environmental goods using non-market- and market-based valuation techniques, sustainable development and ecosystem services.

Marta Pascual is Ikerbasque Postdoctoral Researcher and currently has a postdoctoral grant from the Basque government. She applies seven years of professional experience in different lines of marine research to marine spatial planning (MSP); marine ecosystem services mapping and modelling; integrated coastal zone management (ICZM); decision support systems (DSS) and ecosystem services valuation (ESV). Her current research interests are focused on ecosystem services mapping, modelling and evaluation as well as in marine spatial planning management, marine socio-economics, marine governance and the implementation of marine European directives (MSP Directive and the Marine Strategy Framework Directive – MSFD). Her work has also succeeded in publications in international peer-reviewed journals.

Daniel Pauly is Professor and Principal Investigator, Sea Around Us, University of British Columbia, Canada. His work, including concepts, methods and (co-)developed software, documented in over 500 heavily cited publications, is used throughout the world, and he is recognized in various profiles, notably in Science, Nature and the New York Times, and by numerous awards, notably the International Cosmos Prize (Japan, 2005), the Volvo Environmental Prize, (Sweden, 2006), the Ramon Margalef Prize (Spain, 2008), the Nierenberg Prize for Science in the Public Interest (2012) and the Peter Benchley Award (2015). His work also led to Dr Pauly receiving seven honorary doctorates and being elected a Fellow of the Royal Society of Canada (Academy of Science).

Ana Giró Petersen is the Guatemalan Coordinator for the Healthy Reefs Initiative and is based in Guatemala City. Ana earned her degree in marine science and aquaculture from the University of San Carlos and is currently writing her thesis for a Master’s degree in environmental science (University of Cádiz). She has participated in reef ecology monitoring programmes and has worked for many years in the Caribbean Coast of Guatemala carrying out reef research geared towards conservation. She worked as a Professor of the University of San Carlos of Guatemala from 2009 to 2013, teaching oceanography and coral reef ecology, and has also worked in different projects for the United States Agency
for International Development (USAID), Global Environmental Fund (GEF) and local NGOs. She is a passionate scuba diver and loves underwater photography.

**Roberto Pott** is the Social Scientist and Belize Country Coordinator at Healthy Reefs for Healthy People. He has worked in terrestrial and marine ecosystem research and management over the last 20 years including the Rio Bravo Conservation and Management Area Programme for Belize, Gladden Spit Marine Reserve and Blue Hole and Half Moon Caye Natural Monuments managed by the Belize Audubon Society. Roberto earned a Master’s degree in environmental management from Duke University’s Nicholas School of Environment. He has co-authored papers on resource management and ecology and is a vocal advocate for the preservation of socio-ecological links between local communities and their natural heritage.

**Harifidy O. Ralison** holds a Master’s in ecological marine management from the Vrije Universiteit Brussel, Belgium. He has worked for the WWF in Madagascar since 2006, as Marine Programme Officer in charge of the Madagascar portfolio, then WWF’s Western Indian Ocean Marine Programme and now the trans-national seascape Northern Mozambique Channel initiative. Harifidy has been instrumental in designing and coordinating the implementation of WWF marine field projects as well as in engaging with marine partners, including with Nairobi Convention, and multi- and bi-lateral donors.

**Adriana Ressurreição** holds a PhD from the University of the Azores, Portugal. Primarily a biologist with interests in socio-economic issues, her work has been dedicated to examine people’s views, perceptions and values related to the benefits flowing from marine ecosystems. Her main interests include stated preference methods, market-based valuations, participatory approaches, marine protected areas, marine spatial planning, marine-based tourism and marine conservation. Currently, she is a postdoctoral researcher at the Marine and Environmental Sciences Centre (MARE) of the University of the Azores where she has been coordinating a project on the valuation of socio-economic impacts associated with marine ecotourism in the Azores.

**João Ribeiro** is Director-General for Maritime Policy under the Portuguese Ministry of Agriculture and Sea and holds the rank of Navy Captain (Reserve). He is the National Coordinator for the integrated maritime policy, including liaison with EU and UN, and implementation of the National Ocean Strategy and technical executive supporter to the Inter-Ministerial Commission on Maritime Affairs and the National Coordinator for Cooperation on Ocean Affairs in support to the Ministry of Foreign Affairs. He had a 25-year naval service career, on naval, joint and combined forces and staff, and mostly dedicated to operations, communications and information systems, as well as interagency and international cooperation. He has been engaged in real-world operations in the Balkans, East-Mediterranean and Africa. While ashore, he was National Liaison Representative to the Allied Commander Transformation, and US Joint Forces Command, both in the US, and Head of the Operations and the External Affairs Divisions of the Portuguese Navy Staff, and Navy Representative to the National Maritime Coordination Centre.

**Julie Richardson** is Senior Lecturer in New Economics at Schumacher College (an international centre for transformative learning in sustainable living) in the UK. Previously she was lecturer in ecological economics and international development at...
University College London and Sussex University. She was a founding trustee of the Transition Network (an international social movement for community-based responses to climate change, peak oil and economic crises). Previously she has served as a senior environmental policy adviser to the UK Prime Minister’s Strategy Unit and as an economic adviser at Forum For the Future advising the business sector on how to incorporate sustainability into strategy and performance measurement.

Julien Rochette is the coordinator of the Oceans and Coastal Zones Programme at IDDRI. He has been working both at global and regional levels, specifically in the Mediterranean, Western Indian Ocean, Pacific, and Western, Central and Southern Africa.

Daniela Russi is a Senior Policy Analyst in the Environmental Economics Programme of the Institute for European Environmental Policy (IEEP). She deals with a wide range of topics related to ecological and environmental economics, including the social benefits and management of water, wetlands and marine protected areas, Payments for Ecosystem Services (PES) and Natural Capital/Ecosystem Accounting. She holds a PhD in environmental sciences and ecological economics from the Autonomous University of Barcelona, Spain. She has published several peer-reviewed papers in international journals and is the first author of the TEEB water and wetland report and of a TEEB report on natural capital accounting and water quality.

Melita Samoilys is a Director of Coastal Oceans Research and Development – Indian Ocean (CORDIO), Mombasa, Kenya. Her research interests are coral reef fishes – ecology, diversity and fisheries; reproductive biology of groupers, particularly spawning aggregations; marine protected areas; and community-based approaches to management, conservation and alternative livelihoods. She is a member of several international advisory bodies including three IUCN species specialist groups (groupers and wrasses; snapper seabream and grunt; and shark); the Institute for Water Environment & Health, United Nations University and the Marine Stewardship Council (MSC) Developing World Working Group.

Conceição Santos is currently Head of the Strategy Department in the Directorate General for Maritime Policy under the Portuguese Ministry of Agriculture and Sea. She supports the Portuguese representative in the European Integrated Maritime Policy, in what concerns socio-economic analysis of marine and maritime issues. Since 2010 she has been working as a senior adviser in what concerns socio-economic monitoring in the context of national ocean strategy and she is nowadays responsible for its strategic monitoring. She has coordinated reports for the European Commission in the context of the Marine Strategy Framework Directive and she is the Portuguese representative in several international groups dealing with marine and maritime socio-economics issues. In recent years she has been involved in bilateral and multilateral cooperation, involving Portugal and other countries or organizations, and in international processes, including the support of Portuguese position during the RIO+20 UN conference and for the post-2015 Agenda, in what concerns the ocean thematic.

Peter Scheren holds a PhD in integrated environmental assessment from the University of Eindhoven and University of Wageningen in the Netherlands. He has worked for various research institutions and consultancy offices, and has managed several large-scale coastal
and marine programmes and assessments in Africa for the United Nations Environment Programme (UNEP) and the United Nations Industrial Development Organization. He is currently attached to the Worldwide Fund for Nature (WWF) as the Leader of the Coastal East Africa Initiative.

Jean-Pierre Schweitzer is a Policy Analyst in the Green Economy Programme at the Institute for European Environmental Policy (IEEP). He has a Master’s from Humboldt-Universität, Berlin and the University of Bath, and also holds a BA from Worcester College, Oxford University. He works widely in environmental economics, covering issues such as progress indicators, environmental fiscal reform, the socio-economics of biodiversity and nature conservation, as well as marine litter. In 2015 he contributed to the Springer open-access book *Marine Anthropogenic Litter*, and led a chapter on commercial shipping for a UNEP-commissioned study on the socio-economics of marine litter.

Megan Seneque’s career both as an academic and as a social process and development professional began in South Africa at the University of Kwa-Zulu Natal. She was involved in long-term work on curriculum transformation in the transition to post-Apartheid South Africa. Megan was Founding Director of the University of Kwa-Zulu Natal’s Leadership Centre – established to build new and appropriate forms of leadership for sustainable development in the African context. She is currently involved in a number of global projects, including TEEB for Oceans & Coasts with GRID-Arendal and UNEP, working with participatory processes that enable collaboration across traditional boundaries and which promote systemic change. These projects integrate research, process consulting and human development. She has a Master’s in curriculum development and design, and is involved in PhD research with Roehampton University in learning and knowledge creation across boundaries. She is Honorary Research Fellow with the University’s Centre for Organizational Research and member of the Global Practitioner Circle with the Massachusetts Institute of Technology’s Presencing Institute.

Christian Severin is a Senior Environmental Specialist at the Global Environmental Facility where he serves as the Lead for the International Waters Focal Area. He has worked extensively with both freshwater and marine ecosystems, with a focus on land-based sources of marine pollution and drives towards policy reforms leading to partnerships between public and private sectors. Previously, he has worked with both freshwater and wastewater solutions within different private sector companies, coupled with institutional building in academia. He sits on numerous steering committees and boards.

Payal Shah is a research scientist at the Okinawa Institute of Science and Technology, Graduate University. Her research primarily uses economic theory to analyse social and environmental consequences of natural resource management policies, formulate optimal strategies to address environmental challenges such as climate change, and to evaluate preferences for environmental services. Payal received a PhD in agricultural and applied economics (2013) and an MSc in agricultural and consumer economics (2009) from the University of Illinois at Urbana-Champaign. She also has an MBA in finance (2004) from the Management Development Institute, India. Payal’s research has been published as articles in leading journals including *Resource and Energy Economics, Land Economics, PLOS One, Conservation Biology* and the *American Journal of Agricultural Economics*. 
Ioannis Souliotis is a PhD candidate at Athens University of Economics and Business, Greece. He holds a BSc in economics from Athens University of Economics and Business and an MSc in environmental and natural resource economics from the University of Copenhagen. He specializes in the use of non-market valuation techniques. His research interest lies within economics, econometrics, economic valuation techniques, water management and economics of natural resources. He has taken part in many EU projects.

João Matos de Sousa holds a Master’s in biotechnology engineering and a Post-Graduation in engineering policy and management of technology. He has 20 years’ project management, communication and environment experience on strategic and operational levels focusing on positive environmental and conservation change with an established international network in climate change, research and development (R&D), policies and technological solutions. He is an author and co-author of 20 publications mainly in environmental and biotechnological field. He is working at IUCN Marine group as a project manager, developing platforms of stakeholders, focused on conservation and mitigation for the energy sector, and marine conservation with the plastic industry.

Abdellah Srour has dedicated 20 years of his professional career to the scientific research of fisheries. Having started his professional path at the National Institute for Fisheries Research (INRH) of Morocco, Mr Srour actively participated in the fishery management activities, as led by several international organizations. In 2005, Mr Srour was asked to serve as Deputy Executive Secretary and subsequently as Executive Secretary of the FAO GFCM, a full-time role which he still holds. Over his 20 years in the field, Mr Srour has accumulated considerable experience in the technical and institutional management of fisheries and aquaculture. In addition, through his time as Executive Secretary of FAO GFCM, he has produced numerous publications and working documents on fisheries management, on the political and administrative facets of the fishing industry, and has also contributed to the Commission’s much needed structural and legal reform.

Paul Steele is a Chief Economist at IIED specializing on the linkages between environment, climate and poverty reduction. He has more than 20 years’ experience working for international organizations, including the United Nations Development Programme, the European Union, the World Bank and the International Union for Conservation of Nature, as well as the UK and the Sri Lankan governments.

Dave Steinbach is a researcher at the International Institute for Environment and Development (IIED) in London. His research focuses on the themes of climate change adaptation and natural resource management, in ways that deliver inclusive and equitable solutions for the world’s poorest communities. He holds an MSc in development studies from the London School of Economics and Political Science and a BA in international relations from the University of British Columbia.

Riad Sultan is a Senior Lecturer in Economics at the University of Mauritius. He followed his specialized courses on environmental and natural resource economics at the Centre of Environmental Economics and Policy in Africa (CEEPA), University of Pretoria, South Africa. He has conducted research on areas such as green jobs assessment, green industry, energy and bio-ethanol, and ecosystem valuation in Mauritius. He has wide experience in socio-economic issues and policy-making and was also involved as the Research
Contributors

Coordinator for the African Peer Review Mechanism (APRM) project in Mauritius for the African Union. He is currently researching on natural resource accounting and bio-economic modelling of fisheries and marine protected areas in the Indian Ocean.

U. Rashid Sumaila is Professor and Director, Fisheries Economics Research Unit. Rashid authored over 180 articles in journals including Science, Nature and the Journal of Environmental Economics and Management. He is winner of the 2013 American Fisheries Society Excellence in Public Outreach, the Stanford Leopold Leadership Fellowship and the Pew Marine Fellowship, and has given talks at the UN Rio+20, the World Trade Organization, the White House, the Canadian Parliament, the US Congress, the African Union, the European Union and the British House of Lords.

Lisa Emelia Svensson is Sweden’s appointed ambassador for oceans, seas and fresh water, advising the Minister for the Environment on a broad spectrum of marine- and ocean-related issues. Earlier appointments include ambassador for public–private partnerships, where she negotiated and mediated among governments, industry and civil-society representatives. As Sweden’s national expert on sustainable development, posted in the European Commission, DG Trade, she was chief negotiator for the sustainable-development chapters in EU free-trade agreements. She has been in the diplomatic service since 2000, posted in New York, Washington, DC, and Brussels. She has a doctoral degree in political economy, innovation policies and practice from the School of Business and Commercial Law, Sweden.

Vincent Sweeney holds both a Bachelor’s degree and a Master’s degree in civil engineering from the Technical University of Nova Scotia, Canada. He was admitted to the Association of Professional Engineers of Nova Scotia (APENS) as a full member in 1989. He is currently based in Nairobi, Kenya as the Coordinator of the Global Programme of Action for the Protection of the Marine Environment from Land-based Activities (or GPA), located within the United Nations Environment Programme (UNEP) headquarters. The GPA addresses the priority pollutant sources of wastewater, marine litter and nutrients, and is the host for the Global Wastewater Initiative, the Global Partnership on Nutrients Management and the Global Partnership on Marine Litter. He served for ten years as Executive Director of the Caribbean Environmental Health Institute and has worked with water utilities in the Caribbean and in private consulting firms.

John Tanzer has been Director of the WWF’s Global Marine Programme since 2012. John was appointed as the inaugural Chair and Chief Executive of Queensland’s Fisheries Management Authority (QFMA) when it was established in 1994. In 1998 he was appointed as Executive Director of the Great Barrier Reef Marine Park Authority (GBRMPA); from 2001 onwards he was the executive responsible for the oversight of the spatial rezoning of the Great Barrier Reef Marine Park. More recently he has worked extensively with the Coral Triangle Initiative in Southeast Asia and the South Pacific, and is supporting the Northern Mozambique Channel initiative as one of WWF’s marine priority areas.

Louise Teh is a Research Associate with the Fisheries Economics Research Unit at the University of British Columbia Institute for the Oceans and Fisheries, Canada. Her research focuses on how interactions between humans and marine ecosystems impact
fisheries sustainability. Her work covers global and local scales, ranging from global biodiversity assessments to socio-economic studies of small-scale fisheries. She is particularly interested in working with small-scale fishing communities in developing countries, and has been involved in marine conservation projects on valuing marine turtle conservation, marine protected area management and climate change adaptation. Louise holds a PhD in resource management and environmental studies from the University of British Columbia.

Lydia Teh is a postdoctoral Research Fellow at the University of British Columbia Institute for the Oceans and Fisheries, Canada. Her research focuses on the socio-ecological dynamics of fisheries, particularly small-scale fisheries in developing countries. Lydia currently works with the Sea Around Us project on historical reconstructions of the world’s marine fisheries catch statistics. She has consulted on projects on marine turtle conservation, marine protected area management and climate change adaptation, and led workshops on socio-economic survey methods and coral reef resilience. Lydia holds a PhD in resource management and environmental studies from the University of British Columbia.

Florian Thevenon holds a PhD in environmental sciences focusing on the reconstruction of past climate variations in tropical terrestrial and marine ecosystems by studying climate archives. He pursued his academic carrier by working on the impact of climate changes and human activities on freshwater resources. He specializes in the environmental assessment of all anthropogenic sources of water pollution and of the impacts of human activities at the basin scale. He is an author and co-author of over 40 highly cited peer-reviewed publications. He is now working as a consultant for IUCN Marine Group on marine plastic issues and for the NGO WaterLex on sustainable solutions based on human rights to improve water governance worldwide, particularly on wastewater management issues.

Luis Valdés was the Head of Ocean Sciences at the Intergovernmental Oceanographic Commission (IOC) of UNESCO from 2009 to 2015, and formerly (2000–2008) he was the Director of the Centro Oceanográfico de Gijón – Instituto Español de Oceanografía (CO Gijón – IEO). With more than 33 years of experience in marine research and field studies related to marine ecology and climate change, in 1990 he established the time series programme based on ocean sampling sites and marine observatories which is maintained by Spain in the North Atlantic. He has advised various governmental, intergovernmental and international organizations as well as research funding agencies. He has vast experience in the International Council for the Exploration of the Sea (ICES) where he has chaired different working groups and committees including the Oceanographic Committee. He also served as Spanish Delegate in ICES and in the IOC-UNESCO.

Dixon Waruinge, is a Kenyan national with a background in tropical coastal management, with over 14 years’ experience working for UNEP, first as a programme officer for the Nairobi and Abidjan Conventions for the protection of the marine and coastal environment in Africa, and later as a coordinator, leading the Secretariat for the Nairobi Convention with a responsibility for guiding intergovernmental dialogue on the management of the marine and coastal environments in the ten countries of the western Indian Ocean region. His professional experience also includes national-level practice in the management of marine parks and reserves in Kenya and six years as a Project Coordinator
for FAO, responsible for projects on integrated coastal zones management in the eastern African Region.

**Emma Watkins** is a Senior Policy Analyst at the Institute for European Environmental Policy (IEEP). Working in the Industry, Waste and Water Programme, she focuses in particular on waste- and resource-related projects. Her recent project work has included studies on waste-related economic instruments and development of guidance for extended producer responsibility schemes. She led a study for UNEP on the socio-economics of marine litter and co-led a study for the European NGO Seas at Risk on how to improve EU legislation to tackle marine litter. She also co-authored a chapter in the open access book *Marine Anthropogenic Litter*, published by Springer in 2015.

**Sirini Withana** is a Senior Policy Analyst at the Institute for European Environmental Policy (IEEP). She is currently co-leading the Institute’s work on global challenges and on environmental fiscal reform. At IEEP, Sirini has managed pan-European research projects on environmental tax and subsidy reform, resource efficiency, circular economy, environment action programmes (EAPs) and financial instruments. She has contributed to several publications, reports and books in the area of green economy and fiscal policies. Before joining IEEP, Sirini worked at the Environment Agency for England and Wales.

**Patrizia Ziveri** is ICREA Research Professor at the Institute of Environmental Science and Technology (ICTA) of the Universitat Autònoma de Barcelona, Spain, where she is the Deputy Director for research and the Scientific Director of the ICTA-UAB ‘Unit of Excellence’ accredited by the Spanish Ministry of Economy and Competitiveness. Her work is unravelling the impacts of global environmental change on marine ecosystems and biogeochemistry at various timescales and complexity through multidisciplinary investigation. She has published more than 100 journal articles and book chapters and is leading the research group on ocean acidification at the ICTA-UAB. She recently coordinated an international initiative funded by the European Commission on the Mediterranean Sea acidification and warming (MedSeA). She is also a member of several international committees and working groups (for example, SOLAS-IMBER and UNGESAMP WG40 microplastics). This work is expanding on the effects of human-made climatic and non-climatic environmental drivers integrating the understanding and quantification of how these changes disturb the capacity of marine systems to provide ecosystem services, which consequently affect economic activities and human welfare.
