

Acknowledgements

This book is the culmination of a research sabbatical that I undertook in 2015, during which time the concept for this collection was born. One of the objectives of the research leave was to bring together experts in intellectual property (IP) and 3D printing from the United Kingdom, United States of America and Australia. I am grateful for having had the opportunity to collaborate with a number of academics, practitioners and policy makers from these jurisdictions during this time.

I am very thankful to Bournemouth University for funding my research leave, leading to the development of this book, as well as for the support extended during the process. I am deeply grateful to Professor Mark Lemley of Stanford University and Professor Matthew Rimmer of Queensland University of Technology for coming on board this project and for seeing this book to its completion.

My appreciation and thanks to my PhD student and Research Assistant, Dukki Hong, for his assistance, particularly in the final stages of this collection and to Professor Dianne Nicol and Dr Jane Nielsen of the University of Tasmania for supporting my research leave in Australia. Thank you also to numerous colleagues who have commented on my work, in written format or at public engagements, and inspired me to carry out deeper research in this field.

In particular, I would like to thank my husband, Samira Perera, for his continuous support, love, encouragement and good humour during this process. I would like to dedicate this book to my late parents; you were my greatest inspiration and support. I know I would not be here without you.

Dinusha Mendis

My greatest appreciation to Professor Dinusha Mendis and Professor Matthew Rimmer for bringing this book together.

I would also like to thank Yochai Benkler, Ryan Calo, Julie Cohen, Deven Desai, Graeme Dinwoodie, David Engstrom, Paul Geller, Paul Goldstein, Rose Hagan, Dan Ho, Martin Kretschmer, Mike Linksvayer, Mark McKenna, Lisa Larrimore Ouellette, Josh Walker, and participants

in workshops at Yale Law School, Stanford Law School, Notre Dame Law School, Hastings Law School, WIP-IP, and the EPIP conference for their comments on an earlier draft of my work.

Mark Lemley

I am grateful for the help and assistance of the leaders of the Law and Crime and Justice programs at QUT, including Professor John Humphrey, Professor Kerry Carrington, Associate Professor Judith McNamara, and Professor Belinda Carpenter.

I also remain grateful for the support of my senior colleagues, Associate Professor Nicolas Suzor, Dr Kylie Pappalardo, Dr Angela Daly, and Dr Monique Mann, as well as other members of the QUT Intellectual Property and Innovation Law Research Program. My work as an editor and a contributor for this collection was supported by an Australian Research Council Discovery Grant on 'Inventing the Future: Intellectual Property and 3D Printing'.

I would also like to acknowledge the help of my family. In particular, my parents, Peter Rimmer and Sue Rimmer, have provided useful feedback on the geography of 3D printing and additive manufacturing. My siblings, Joe Rimmer and Rachel Rimmer, have both been creative makers and designers. My wife, Susan Harris Rimmer, has provided helpful advice on 3D printing and sustainable development. My children Marina Rimmer and Joshua Rimmer have benefitted from a maker education at Tech Girls Are Superheroes and Teen Tech Shed respectively. I hope that the collection can help inspire further creative and ingenious applications of 3D printing by the Maker Movement.

Matthew Rimmer
