<i>List of contributors</i>	vii
<i>Preface: Teaching benefit-cost analysis</i>	xii

PART I THE BIG PICTURE

1 Decision rules <i>William K. Bellinger</i>	3
2 Triangles and all that <i>Arnold C. Harberger</i>	16
3 Defining the baseline <i>Charles Griffiths and Chris Dockins</i>	40
4 The concept of standing in benefit-cost analysis <i>Richard O. Zerbe</i>	58
5 Partial equilibrium versus general equilibrium evaluations or small versus large projects <i>Per-Olov Johansson and Bengt Kriström</i>	69
6 Benefit-cost analysis and US regulatory review: Finding a market failure <i>Susan E. Dudley</i>	78
7 The essentials: A short course for young professionals <i>Gelsomina Catalano and Massimo Florio</i>	86

PART II CHALLENGING CONCEPTS AND EXAMPLES

8 Valuing statistical lives <i>Lisa A. Robinson</i>	105
9 The arithmetic of efficiency—Or the value of marginal analysis <i>John Mendeloff</i>	114

10	Treatment of employing and disemploying workers <i>David Greenberg</i>	124
11	Uncertainty and risk <i>Nicolas Treich</i>	133
12	On defining and valuing the benefits of health policy interventions: How and why CEA in health morphed into CU(B)A and “back-door” BCA <i>David Salkever</i>	140
13	Harmful addiction <i>David Weimer</i>	158
14	Supplementing benefit-cost analysis: Models for transportation and land use decisions <i>Emile Quinet</i>	168
15	Evaluating knowledge projects and R&D infrastructures with an example <i>Massimo Florio and Chiara Pancotti</i>	180
16	Cost estimation in education: The ingredients method <i>Clive Belfield, A. Brooks Bowden and Henry M. Levin</i>	200
17	Distributional accounting in benefit-cost analysis <i>Kerry Krutilla</i>	208
18	Case studies in the classroom: Lessons learned <i>Stuart Shapiro</i>	223
19	Simulation: Incorporating uncertainty <i>Scott Farrow</i>	232
	<i>Index</i>	239
