Acknowledgments

This volume is the product of the fine chapters that the contributors have provided us with. Together, their contributions form a rich and diverse overview of issues related to the methodology of experimentation in economics. Over the course of 18 months, contributors have had to endure deadlines, anonymous reviews, many comments, and editorial suggestions. We are thankful for all the efforts they have made to accommodate this.

To help the authors achieve the highest quality, each chapter was reviewed by one of us and two reviewers. We are grateful for the helpful advice of the following reviewers: Antonio Alonso Arechar, Nadège Bault, Gary Charness, Daniel Chen, David Cooper, Carsten De Dreu, Jan Engelmann, Guillaume Fréchette, Daniel Friedman, Christina Gravert, Ben Greiner, Daniel Houser, Ollie Hulme, Martin Kocher, Michał Krawczyk, Paul van Lange, Mael Lebreton, Aaron Kamm, Peter Moffatt, Rosemarie Nagel, Charles Noussair, Andreas Ortmann, Arno Riedl, Vjollca Sadiraj, Anya Samek, Rupert Sausgruber, Andrew Schotter, Cristiane Schwieren, Adriaan Soetevent, Jeroen van de Ven, Lise Vesterlund, Peter Wakker, Matthias Weber, Peter Werner, Nathaniel Wilcox, Christian Zehnder and Daniel Zizzo.

We would not have completed this volume on time without Aslihan Akdeniz, to whom we are very grateful for her efforts and assistance in the final assembly of the chapters.
