 application in Georgia and Armenia 152–60
 bottom-up versus top-down 142–52
- technology options 140–45, 151–5, 160–63
- technology penetration
 in Armenia and Georgia 154, 156, 162
 as capital–fuel substitution 143–4
- 'technology pork barrel' 75
- technology transfer model 75–6
- Tesla Motors 70–71
- Teytelboym, A. 77
- The Economics of Ecosystems and Biodiversity (TEEB) 103–5
- theoretical growth models 96–102
- Timilsina, G. 141–2, 152, 156, 159–60, 163
- total factor productivity (TFP)
 circumstance where it could be sustained 96
 concept of 86
 endogeneity 98–9
 factors affecting 101, 103, 104, 118
 ICT as crucial factor for growth 490
 measuring 89–90
 in relation to labour productivity growth 97
 studies on impacts on growth 119
- trade protectionist measures
 favouring manufacturing 317
 global competition in supply of technologies resulting in 295
 for green technologies 289, 295, 311, 316
 increasing number of 289, 291
- transitions
 economic 477–83
 energy 40–49, 77–9, 244–55, 474–7

- to green economy 28, 190, 240
- green transformations different from 406–7
- human capital 483–7
- to knowledge economy 483–91
- to low-carbon economies 8–10, 70, 201–2, 213
- to smart green growth
 - lessons from history 457–9
 - previously involving redefinition of ‘the good life’ 452
 - reasons for 451–3
 - role of relative prices in shaping and accelerating 453–4
- Turner, K. 129, 131, 133
- United Kingdom (UK)
 - agriculture, historical 478, 480
 - air pollution mortality rates 362
 - communication services use 489
 - current and efficient energy prices 368
 - energy and communication intensity 493
 - historical coal use 474–6, 496–7
 - literacy levels 485–6
 - long run trends in GDP per capita 479
 - mitigation pledges, emissions intensity, and emissions per capita 363
 - proportion of knowledge spillovers 236
 - proportion of local spillovers 227
 - share of primary energy consumption 475
 - transition of employment sectors 480
 - use of communication technologies 488
 - welfare system 408
 - wind turbines 308
- United States (US)
 - air pollution mortality rates 362
 - business investment in R&D 248–9
 - from conventional gas to shale gas 247, 253
 - crystalline silicon module production capacity 290
 - current and efficient energy prices 368
 - decommissioned PV cell manufacturing capacity 306
 - dedicated funds to green sectors from stimulus packages 294
 - employment 454–7
 - evolutions of shares in GDP 482–3
 - generation capacity from WWS sources 336
 - mitigation pledges, emissions intensity, and emissions per capita 363
 - natural gas in 42, 93, 247
 - as one of top wind manufacturers 289
 - post war policies creating demand and directing innovation 458
 - proportion of local spillovers 227
 - public finance of innovation chain 242–3
 - publicly funded technology behind smart phones 242–3
 - solar PV technologies 306–7
 - transition of employment sectors 480
 - welfare system 408
 - wind turbines 308
- Urban, F. 407, 409
- value-added
 - in African agriculture 427, 435
 - to economies 292, 301, 305, 311–14
 - manufacturing 331, 429
 - measures of productivity 89, 103
- van den Bergh, J.C.J.M. 52–3, 55–8, 60–63, 127, 329, 340
- Victor, P.A. 21, 24, 32–4, 36, 38–40, 44, 52, 55, 96
- Vietnam
 - centrally-planned sustainability change 420
 - renewable energy politics 416–17
 - state-led transformations in 417–19
 - stateness in 418
 - suitability for green transformation 415
- voice in Africa 437–8
- Wallbott, L. 412
- weightless economy
 - dematerialization 464–5, 473
 - economic realities 465–7
 - emerging twin peaks distribution dynamics 466–7, 470–71
 - for future economic growth 497
 - importance of growing role for 96
 - incorporating new ideas 175
 - inequality 470–71
 - infinite expansibility 467
 - information technology 464–5, 467–9
 - polarization
 - dematerialization and 470
 - in emerging twin peaks distribution dynamics 471
 - for reduction in carbon dioxide emissions 473
 - software 464–5, 467–9
 - stratification
 - dematerialization and 470
 - in emerging twin peaks distribution dynamics 466
 - superstar economies 470
