*'Sako Musterd has brought together an extraordinary group of distinguished scholars from across the world to produce a cross-national, interdisciplinary study of urban segregation. As well as providing a wealth of empirical data and methodological approaches to the study of segregation, the book makes important contributions to the analysis of globalization, neoliberalism, gentrification, and the decline of the welfare state. Yet, while attributing much to these general processes, it also distinguishes the varying effects of particular local and national policies.'*

Susan S. Fainstein, Harvard Graduate School of Design, USA

*'This book presents new points of departure for debates about segregation. Its chapters provide original, cross-disciplinary, research-based accounts using different frameworks to build on earlier work. They explore economic, policy and other factors that drive changing patterns of urban segregation in different cities and countries, and analyse how the various dimensions of segregation are overlapping and reinforcing. The book provides new insights and a new baseline that make it essential reading for anyone concerned with urban research and policy.'*

Alan Murie, University of Birmingham, UK

*'Social segregation is a wide-ranging and important phenomenon within cities across the world. The implications are profound in terms of social interaction as well as access to employment, housing, education, health, transport and open space. This valuable edited collection examines the variations in segregation in a variety of different cities and contexts and will be an important source for staff and students.'*

Chris Hamnett, King's College London, UK and Renmin University, China

*'The Handbook of Urban Segregation provides a truly panoramic view of segregation issues in cities in Africa, Asia, Australia, Europe and America, and expands the scope of segregation to multiple urban domains. Sako Musterd and a group of leading scholars thoroughly investigate urban segregation conceptually and methodologically. Revisiting the classic topic under the changing welfare state and globalization, the Handbook is timely in the face of rising segregation along multiple urban dimensions.'*

Fulong Wu, University College London, UK
