Key Principles for Connectedness  
Learning  
Connectedness capabilities  
42, 46  

Students have the  
opportunity to  
develop social  
connections and  
relationships 12  
Students develop one  
or more of the  
connectedness  
capabilities 12  
Students develop skills  
in terms of career  
development  
learning 13  
Connectedness pedagogies  
91–8, 102, 253–7  
The learning is authentic  
and occurs in  
real professional  
contexts 13  
Students co-design  
a learning  
experience that  
is meaningful for  
them 13
Industry/community partners provide input into designing a learning experience 13
Partners are carefully selected for alignment with student and program needs 13
Appropriate just-in-time resources and learning activities are provided 13
The program is tailored to partner, learning context and specific student needs 13
Students maintain the connections they have made and continue to benefit from them 13

Enabling strategies 185, 187
The program is ‘plugged in’ to wider professional, industry and interest groups and networks 13
The program seeks out and develops new relationships in a strategic way 13
The program deepens the relationships it has in effective ways 13
Interactions and communications are straightforward and effective 13
Processes are simple and straightforward 13
Partnerships and networks within the university (intra-university connections) are present and optimized 13
There are enough resources (people, workload, funding) 13
There is an evaluation plan in place that covers the above dimensions 13
Practical approach 139
Qualitative analysis of student employability reports 105
