Acknowledgments

This book was conceived as COVID-19 emerged, configured as it spread globally, carried out during the pandemic and finalized as it peaked. Like almost all fields of human activity, the direct and indirect effects of the pandemic presented an obstacle at times seemingly unsurmountable. In the end, the collective energy and positive spirit of all was able to complete the project in due time and form.

It was thanks to that common sense of purpose and determination that this project was completed. We want to acknowledge each and every one of the women and men who have vested their best intellectual and emotional capacities into finalizing this work.

We want to acknowledge the collective support provided by the World Capital Institute (WCI) team who have contributed so much from writing chapters to providing the organizational support behind the project. As the twin volume project (this book, *City Preparedness for the Climate Crisis* together with its twin volume *Knowledge for the Anthropocene*, both as part of Edward Elgar's *Multidisciplinary Movements in Research* series) emerged from strategic planning at WCI, this initiative should be seen as the fruit of that collective endeavour. Above all, we want to thank Tatiana Schreiner without whom this book would not exist in its current form. Tatiana generously provided the patience and dedication to convert our list of potential authors into the valued contributors we now include. Thanks to her steadfastness and cheerful devotion to the task, that challenging stage was duly accomplished. As a token of appreciation this book is dedicated to her.

A total of 48 authors of 17 different nationalities have taken part in this work. Each of them has a story to tell regarding the obstacles the pandemic presented to complete their contributions. From health and family crises through job disruption, environmental hazards and country migration, all have been somehow affected by the pandemic, just as everyone else the world over. The vast majority of them was able to complete their contributions and endure the review process and subsequent draft iterations. To each of them we acknowledge their professionalism and kind disposition.

A special thanks is due to Sirkku Juhola, who has written the preface to this book. As we feel honoured by her generous acceptance, we acknowledge her unique contribution in the direction this book is pointing towards. She has an outstanding career on urban climate mitigation and adaptation planning at the

University of Helsinki, having also worked in Ghana, Nigeria and Tanzania. Her work underscores the significance of social, economic and cultural factors in determining urban impacts of environmental risks. Thank you, Professor Juhola.

Finally, we want to acknowledge the high standards and friendly attitude from our colleagues at Edward Elgar. Stephanie Hartley provided an effective and kind-hearted guidance throughout the editorial process. The suggestion to allocate both volumes within the “Multidisciplinary Movements in Research” series was particularly wise. The whole team taking care of the copyediting and proofreading tasks was both highly professional and kind.

This book is therefore the outcome of a fortunate addition of talent and goodwill. We are thankful to all who made it possible.

Francisco Javier Carrillo¹ and Cathy Garner

NOTE

1. On an individual basis, I want to acknowledge the support of the Mexican National Council of Science and Technology (CONACyT) through its National Researchers System (SNI). This work has been conducted while receiving both, the benefit as an Emeritus National Researcher and the corresponding endorsement as Emeritus Professor of Knowledge-Based Development at Tecnológico de Monterrey.
