social assessment 166
technology-specific assessment 166
Z-score model 134–5, 138, 140
We would like to thank the readers of *Artificial Intelligence for Sustainable Value Creation* as thanks to this purchase you are contributing to the funding of the Association Laurette Fugain to which we will devolve 50% of the royalties of this book.

Association Laurette Fugain is a charity fighting against leukemias, committed on a daily basis to the following three aims:

**SUPPORT** pediatric and adult medical research into leukemias

Laurette Fugain is one of the largest associations supporting the fight against leukemia, through strong financial contributions to 189 (December 2020) world-class medical research projects, resulting in a large number of scientific publications and two annual Awards for promising young hematology researchers.

**RECRUIT** life-giving donors (blood, plasma, platelets, bone marrow), through mass media campaigns, presentations in companies and educational institutions, hundreds of local events and key projects carried out with public authorities.

“It is hardly acceptable to see a human being die because others did not know they could save him/her”

–Stéphanie Fugain

**HELP** patients and their families, both in and out of the hospital: supplying equipment, funding state-of-the-art workshops, bringing innovation through national programs (sport, robots against social isolation…), housing assistance, legal aid, etc.

Ethics, transparency, effectiveness and cheerfulness are at the heart of our commitment.
