Corrigendum

‘The fallacy of the natural rate of interest and zero lower bound economics: why negative interest rates may not remedy Keynesian unemployment’, *Review of Keynesian Economics*, 7(2), 151–170, Summer 2019

Thomas I. Palley

Independent analyst, Washington, DC, USA

My thanks to Professor Nazim Kadri Ekinici who has written to me, drawing attention to three errors in my specification of the Classical macro model contained in Appendix 1 on pp. 168–169. The corrected specifications are:

$$C = C(y - T + iB_{-1}/p, r, [H + B]/p, z_C) \quad (\text{A6})$$

$$M = M(y - T + iB_{-1}/p, r, [H + B]/p, z_M) \quad (\text{A8})$$

$$S = I + D + X - M. \quad (\text{A10})$$

Disposable income in equations (A6) and (A8) should include government interest payments.
